Anyway I have faith in this one and will buy it the day it's availible for sale. I'll have 2 months to see if I like it also. That's a perfect amount of time to use a receiver every day to see if you really like it. I'm actually excited about getting it!

Lucky

Hey Telemon, are you able to copy Naval Base Ventura County on 1610khz?
I can pick up LAX on 530khz in my work truck in Camarillo.
I know you are in Ventura.
QTH here is Oxnard

That is one thing which really pisses me off...

Darn manufacturers should ALWAYS provide customer support which has manuals for all their products downloadable on a webpage.

Of course, if customers would smarten up and only by products from manufacturers which provide decent customer support it would help!

Usually with other people's I'd go out of my way to prove what i say is true, Many of this was filmed by independent citizens not the news media. So it'd been documentded. But instead, I recommend a flavored enema for that next time a dinosaur like you needs one. The taste flows up thru your colon and into your taste glands. I figure a truly anal button down dip of a person like you should enjoy it. I think Walmart has a sale on shirts this week....

For a fairly sensitive portable on a short whip this may be is not that
important. Otherwise:YES.
My NRD-525 fits my needs just fine.

Also does the Sony 2010 off the whip. But NO comparison to the NRD-525.
On my FD-4 the 2010 surely needs a preselector The Yaesu FRT-7700 does
it fine there.

Everyone should know, there is a danger from using a database like this, if the author created it with a malicious intent.

A search on google with:

microsoft access database trojan

will make you aware of the dangers...

On Sun, 24 Jul 2005 16:13:22 -0500, "SeeingEyeDog" <look@u.org> wrote:

Famous Thomas Jefferson Quote

"God forbid we should ever be twenty years without such a rebellion.
The people cannot be all, and always, well informed. The part which is
wrong will be discontented, in proportion to the importance of the
facts
they misconceive. If they remain quiet under such misconceptions,
it is lethargy, the forerunner of death to the public liberty. ...
And what country can preserve its liberties, if it's rulers are not
warned from time to time, that this people preserve the spirit of
resistance? Let them take arms. The remedy is to set them right as
to the facts, pardon and pacify them. What signify a few lives lost
in a century or two? The tree of liberty must be refreshed from
time to time, with the blood of patriots and tyrants.
It is its natural manure."

by: Thomas Jefferson
(1743-1826), US Founding Father, drafted the Declaration of
Independence, 3rd US President
Source: November 13, 1787, letter to William S. Smith, quoted in
Padover's Jefferson On Democracy

Categories: Arms, Death, Despotism, God, Guns, Liberty, Militia,
Patriotism, President, Rebellion, Resistance, Tyranny

Reader comments about this quote:
-- Anonymous
-- Ken ********, Aurora
I think Americans should pay more attention to the words of our
founding fathers than to the talking heads on the media.and to the
political poltroons and robots in Washington!
-- John-Douglas, Nassau
Well the blood of patriots has been shed at places like Waco and Ruby
Ridge and who knows where else in the USA - but how come the blood of
tyrants has not been shed, not even one drop? Or do Americans prefer
slavery to freedom?
-- GWDrope, Grimsby, Canada
I think we Americans have grown accustomed to the manure of Big
Government and Bureaucratic Bull - and we enjoy wallowing in this
political filth, just like pigs in the mud.
-- JDoN, Michigan
-- Chris , Oxford, MS
"The tree of liberty must be refreshed from time to time, with the
blood of patriots and tyrants." The blood of patriots and tyrants is

being spilled everyday in the name of liberty. God Bless our Troops
and God Bless America.
-- NYC native, new york city
I agree with NYC Native in some sense, but I think you are
interpreting the quote incorrectly. Jefferson is speaking on domestic
behalfs. This is more a support for 2nd Amendment (RIght to bear arms)
than anything else. He is saying Americans inherently will fight for
their rights. It is the governments duty to respond. It is also a
warning to keep an open government so the people can see what is
happening and not rebel. We have minor cases of this called "riots"
but other than that, the people are happy enough not to rebel against
the govt. He is speaking of civil war and revolt. As for foreign
affairs, I believe the ends will justify the means, but that has
nothing to do with this quote since we were not attacked by Americans.
-- Rob, Raleigh
In our vast ignorance, Americans have taken this quote and twisted it
to justify our foreign wars in recent years. This quote was talking
about REVOLUTION on our own soil, not about going abroad and exerting
our will in other peoples' lands. But I do think it's a very
appropriate quote for the times, in it's original context.
-- EB, Michigan
-- James T. Shaw, Sr., New Castle, PA
Gun control advocates should read this quote and think about what it
really means.
-- M, LVNV
Freedom - democracy, individual and economic freedom are the only
systems worth defending. The only other alternative is Socialism in
various forms.
-- GWL, MPLS
-- Anonymous

You have not responded to my questions enquiring about your racism implicit in your earlier "crazed white guys" statement. I understand you have now realized its silliness.

The assertion that terrorism is somehow related to the West not "living within their means" is a popular cliche amongst the left, but entirely erroneous. None of the 9/11 terrorists were recruited from poor people. Moreover, none of them specified poverty as the cause of their act. For example, Mohammed Atta's father claims that his son's act (of which he remains immensely proud) is just a first shot in a long religious war.

To always look for "white man's guilt" as root causes of events is misleading and disingenuous at the least.

Bono and Geldof are not right at all - they are simply skillful publicity seekers. Throwing money on poor countries won't help them - this will only promote their culture of dependency and corruption and achieve an entirely opposite effect. What would help is establishing a strong legal system combined with responsible law enforcement where

local business can safely take roots, and where foreign business can safely invest to.

People like Bono and Geldof should demonstrate en masse against real "crazy black guys" like Mugabe, the true culprits of poverty, not against this mythical "crazy white man" supposedly responsible for all the world's ills.

It is all too easy to blame responsibility on the West, closing one's eye's to the real causes - which seem too politically incorrect and uncomfortable to speak out.

The West needs to make no excuses for living well - we have worked hard many long centuries to achieve our standard of living. We are always happy to help - as we indeed do. But to blame us for other countries' failures, in this case for the obvious failures of Islamic countries, is a bit too much.

The root cause of economic and social failures of Islamic countries is simply Islam.

Peter Newman

I used to have an ICF-2010 on an umbilical snake (4.5 Vdc, transformer
driven balanced audio, super flexible RG-6) connected to my 120'
random wire, running through a stereo receiver with JBL-Century 100s.
That sounded pretty damn good on KUSW.

5922. Re: Yet another Eton E1 release date

I'm sure Eton wants this thing to be a success. I'd like it to succeed too, for that matter, as it would help the hobby. However, in my opinion, if Eton really wants the E1 to succeed, they should bring the price down....and I mean WAY down. When I could buy an RX-320D for around $350, it's awfully hard for me to rationalize buying the E1 unless I just really, really need portability. And I don't think there are very many people out there who need the portability so badly that they'd spend that much more money for what is ultimately a lesser receiver.

Given what the E1 promises to deliver in the way of performance, I think it should go for around $250 and certainly not for more than $300. I mean, at the end of the day this receiver is a portable. It's not an R8B; it's not a 7030+; it's not an HF-150. It's a portable receiver with some extra doodads tacked on. I'd be willing to bet that my Sony SW77 could run rings around it on shortwave, but I hope I'm wrong.

Steve

A LOT of what we've gained are from PEOPLE going into space USING the
technology that's been developed for PEOPLE like me and you.

Medical imaging and equiptment for starters. Drugs for another. Fire
protection gear for firefighters for another. There are books FILLED
with examples.

Hmmm... I found this.

http://support.microsoft.com/?kbid=897764

You may need to install Microsoft Access 2002 Service Pack 3 as per
instructions and I will see what I can do my end at some point.

Can anyone tell me if it works ok when not using Access 2002(XP).

Thanks

MC

I think his choice of words makes all the difference in the world. He granted permission to quote him, so here it is:

[End Edited Quote]

Anyway, that's The Story According To Larry.

As for who is treating who fairly, when you start referring to him in a respectful but disagreeing way ("Mister" Magne vs "Pissport"), I'll give you points in fairness on the issue.

You might call my position biased because I'm defending him -- you might even be right. But I think I've pointed out that I don't agree with Passport's rating criteria on a number of levels, but their audience is greater than just me.

You might also note that if I found them as "biased" as you seem to think they are, I guarantee you, I'd flame their collective asses here faster than you can say, "Lardass Lloyd Davies."

I have one (original), along with the radio, so if someone wants to
pay for a copy (fairly expensive, about 200 pages), I am probably
willing to do it.

I trust your judgement, and your ability to be fair, so I won't comment on the 'edited quote' statement. Nor do I care if you're biased, or not, you've demonstrated an ability to transcend your biases over the years.

And you'll never hear me say Lardass Lloyd Davies.

I've sent you privately an e-mail of some length. It details my position.

Edited in that there were sentences that just reinforced the point at
the end of the first paragraph, and that there were paragraphs before
and after which were not necessary to drive home the point.

I have many radios, including Drakes, Grundigs, Sonys, a Lowe HF-225,
but the best sounding solid state radio of the lot
is the Philips D2999. The best sounding overall is a tube radio,
Grundig Barcelona, with five speakers (three front, two sides).

I think you mis-wrote your thoughts - - - the Cambride system at the
above link is a few hundred more than the Bose system at jr.com.

>But these are probably all most people need:
>
>http://www.cambridgesoundworks.com/store/category.cgi?category=spk_multimedia&item=c1swzz
zzz

Agreed. Cambridge puts out a nice sounding speaker system - of course
anything that Henry Kloss worked on will get my attention. Don't know
how much they'd improve the R75 audio though.

The point is that a cheap throw away radio works really well in the central Europe environment. And this was an outstandingly cheap radio that did the job. No need for the extra antenna.

We were travelling light. I've damaged other radios travelling before so have decided to take little versus big. You are very correct that selectivity would help. The opposite problem for my situation at home where I need to have a long wire and good noise filtering.

Have you changed the battery? I can see the clock acting up because
the battery is low, and then not getting proper reception to resync properly.

You do realize that they are not continuously receiving the WWVB signal.
To save power, and because the internal crystal oscillator is good enough
for a day or so without an update from the time station, they only gather
the information once a day, usually in the very early hours of the day when
propagation may be best, and when man made interference (like all those
light dimmers and tv sets) will be at a minimum.

Since the times you note aren't in the early hours of the morning,
even if WWVB was sending out the wrong signal at odd times, the
clocks would not notice unless the problem is there when they are
scheduled to sync up.

Also keep in mind that if WWVB was really sending out the wrong information,
it would be noticed by others, and that's not happening.

So change your batteries, and then get back to us.

Michael

Lookup Bose on any HiFi board and you get negative responses. The
Acoustimas system, for instance, has no real subwoofer. I bought the
cambridge Soundworks system and, for the same money as the Bose, got a 500
powered subwoofer system. The system performance is amazing.

Administration Trying to Build CAFTA Majority Vote by Vote
Clash in House With Democrats Takes On Added Status

By Jonathan Weisman
Washington Post Staff Writer
Thursday, July 21, 2005; Page A04

At a closed-door meeting of House Republicans yesterday, Rep. Bill Thomas (Calif.) sidled up to the lectern and hinted that the leadership might look more favorably on lawmakers' requests for highways and bridges if they vote for the Central American Free Trade Agreement, according to three GOP witnesses.

"Just to let you know, we're having some problems with the highway bill. It probably won't be finished until after the CAFTA vote," the deadly serious chairman of the Ways and Means Committee said to knowing laughter.

In the scope of trade deals, CAFTA is a minor economic matter, extending duty-free trading privileges to six Latin American countries whose combined economies are smaller than the Czech Republic's. But as a political fight, the deal has snowballed into a major showdown ahead of the final House vote next week.

"CAFTA has been given symbolic status by both sides that is well outside its true economic importance," said Rep. Phil English (R-Pa.), who opposed the agreement in the Ways and Means Committee, then promised to support it next week after securing a promised vote on China trade legislation. "But that does not mean it does not have enormous political significance," he said.

Both sides agree a CAFTA defeat would weaken President Bush's hand on the rest of his legislative agenda while casting a pall on looming trade negotiations with far greater significance: the hemispheric Free Trade Agreement of the Americas and the Doha round of global trade talks. The Senate recently approved CAFTA.

"Clearly a CAFTA defeat would have larger implications than just the agreement," said Matthew Niemeyer, assistant U.S. trade representative for congressional affairs. "And that's why we won't fail."

Bush has held eight meetings with House members, three with senators, and appeared at five dedicated CAFTA events, the latest scheduled for today at the Organization of American States. Since U.S. Trade Representative Rob Portman took office 2 1/2 months ago, he has held about 100 meetings on and off Capitol Hill.

According to administration and House aides, the White House has authorized Republican leaders to secure votes with whatever is at hand, from amendments to the highway and energy bills to the still incomplete annual appropriations bills. Side

deals may be in the works on textiles and sugar. House leaders have even approved a vote on a slate of punitive China trade provisions that risks alienating a trading partner that dwarfs Central America.

"No one's opposing CAFTA yet," said Julia Hughes, a lobbyist for textile and apparel importers, who is anxious about the concessions already on the table. "But they're really taking away some of the benefits that make it meaningful."

On the other side, Democrats and their allies have countered with threats to cut off fund-raising support for any Democrat flirting with a "yes" vote. Trade unions have used radio advertising to keep up the pressure, especially on three Republicans in the Syracuse, N.Y., area. Constituents of Rep. Charlie Gonzalez (Tex.), an undecided Democrat, have been subjected to two rounds of automated, pro-CAFTA phone calls, while his San Antonio staff was targeted by laid-off Levi Strauss & Co. workers protesting the deal.

"There's a whole lot of pushing and shoving, on both sides actually," Gonzalez said. "There have been some difficult votes around here in the past years, but this one, you've never seen anything like it."

So far, administration officials concede they still do not have the votes to pass CAFTA in the House. They will likely be five to 10 votes short when the proposed agreement goes to a final tally Wednesday or Thursday. Opponents say they have 28 solid Republican votes against the pact, while only a dozen Democrats may back it.

That's like saying that if you don't know how to do octal math you have no business using a computer. Where is the logic (no pun intended) ? Most new amateurs have no interest in cw. If they have the theory down (and the bucks for the equipment), let 'em join! If they are too stupid, they'll electrocute themselves anyway.

From: kk4tl <kk4tl@aol.com>
Message-ID: <1122265650.681205.120870@g14g2000cwa.googlegroups.com>
Source record: 29540

Mr. Tiny-Tenna reports:
Regarding this so-called rumor that Lloyd Davies is dead. I found nothing at five online newspapers and a county coroner's website.

Reply:
We ran the same searches with the same results. We have it on good authority that the Athens, AL office of the Lewis-Louis Detective Agency has been enlisted to get to the bottom of this nasty rumor. I spoke with senior partner, Louis Lewis earlier this evening and was advised that all their resources will be brought to bear on this case between now and the dates of Huntsville Hamfest.

Should they determine that Mr. Davies is still alive, a drop in, complete with Papa John's Pizza, will be held in his honor on the evening of August 20, 2005. Bro. Les suggests that we could call the event "SackFest South".

A special event station using a certain .. amp .. from the .. Nashville area .. will be used, and we'll borrow some Arky Bob wav files from Kevin's website for some spectacular sound effects during The Great Liberty Net.

All in all it promises to be a fine celebration. Don't miss it.

Hey Bro. Lawrence - you in?

DXace has three pat responses he has programmed into pf-keys. He doesn't have to think, but just push the keys and the usual LMFAO and TARD and CANADUH spew forth. Thus his ability to respond to a large number of messages in a seemingly short amount of time.

Source record: 29602

David wrote:
> That's why the White House is stonewalling. Rove proves the war was
> based 100% on lies.

No..it proves that liberal clowns like you allowed the Clinton administration a free-hand to pursue globalization at the expense of American freedom and safety. I fought and work and live in the Middle East. Since Iraq fell, Sadaam no longer funds Palestinians blowing themselves up for $10,000.00 to their remaining family members. Islam has been served notice...the usual "not my responsibility...everything is due to the West especially the USA...) is not going to fly anymore. If dictators and religious despots wish to control their people, then quit using the USA and Christianity as an excuse.

I now see and hear "freedom" on the local populations' lips...women are challenging their slave-like state. For those Black Muslims back there preaching via tapes and sending them here to show that the White Man and America is waging a war against the USA, your time is coming too.

Bottom line...it is a war of ideas and religion...we allowed them to train, arm, and attack us and allies with impunity save an occassional missile. Now the truth is out...but a few misplaced patriots like yourself think you have a right to freedom and privileges under the American flag...it is time for you to pick a side and quit playing the middle. There never is a good reason for war, but given that immediate intervention was required, what would you suppose???

Let me put you and your family and friends at risk over here...you'll quickly see what it feels to live in a sealed, wired compound, have no religious freedom, and endure textbooks written for school children labeling all western institutions as evil and you as an infidel. While you preach moderation, I say you are the problem...get your body in the firing line friend, and let me play the pitying fool, and see how much more they want to kill you and yours.

Freedom has a price...what have you done for America save taxes that we all pay??? As military and now civilian strength of character is required to reverse the last administration's lack of action, and selling out of American values and the world's peoples' future.

How many more Chad, Dafur, Niger, Afghanistan, and Iraqs do you need to see the true nature of the problem. Either we fight the fight and kill these barbarians on their doorstep, or we can do it in your backyard. When you have to bury your men, or shake off another day of "infidel preaching", then you have the right to challenge America's present course of action. Doing nothing is as meaningless as the terrorists'

killings of innocent people. Keep in mind that 76% of terrorists web sites are found in the USA...and watch the American Muslims preach their racical and religious hatred for America, and you can anticipate the next step.....or would you prefer a racial or religious war their in your hometown...it is coming.

Stand and fight, or leave the country as you will be a casualty either way if we fail to earn their respect. To quote Teddy Roosevelt, "...they may never love us, even fear us, but they must always respect us..." We lost that respect with the lover boy's ideas, his wife's one world socialist's views (It Takes A Village), and the Democrats obsession with winning elections and not working for the peoples, not party's well being.

There is a strong wind blowing for freedom over here, even in Saudia Arabia...and you want to fan it out??? Please do and I'll be eager to see what a real man you are on a future battlefield, or burying your children along the way of indecision.

The truth is neer shown to you back there as these are closed societies rivaling that of Cold War Soviet Union. You think CNN can display unbias when a large chuck of that empire is owned by a Middle Eastern millionaire by proxy??? If the soldiers up north and to the east of me think this is the right fight for the right reason in the right place and time, who are you to challenge their personal sacrifice. Unless you ever had to make the choice between life and death, then your arguments are unqualified, and your ignorance is fanning the determined terrorists in the future. How do you defeat a jihadist views promised paradise and 7 virgins, better than the abject poverty they now enjoy under dictators and kings???

In 40 years the oil will run out here...where does the fastest population go and do when that happens here...simply put, to maintain control, you launch a world war of Islam versus all other heathen religions. Well I am sick and tired of their call for jihad...let it happen, and give these ignorant, pagan people the ultimate choice...freedom or death. And no police actions likened to in Iraq...give them total and complete war as we waged against Hitler.

If you read the Koran and Hidaths and deluge of religious material published here for free distribution to the masses, you my friend are doomed or damned. There is no way but their way through Islam.

I'd rather fight and die a man, than "SUBMIT" as a slave for survival or subject my children to an animal like existance.

Fools like you borderline cowardness due to complete ignorance of the facts as they are over here....read any local Arabic newpapers lately...probably not as the TV is probably your only source of information. In synopsis, the war of the future is thrust upon us today...there is no way out, but firmly stating our right to exist as Americans and woshipping God in our own way. There population

outnumbers ours, and soon their weapons will reach your town......they do not fear death as it is promised better in paradise than they currently exist in slavery.

If you want to compare lies than match ours against those uttered by a supposidily devout people of God.....from what I have seen, God has abandoned them centuries ago due to their incest, homosexuality, and extreme religious, racial, and cultural prejudice. They laugh at the black man here, and still maintain slavery under the guise of Islamic laws.....and when we vanish as a nation then the world will truly be in another Dark Ages, as when Rome fell. You have no choice but fight to survive in the lavish lifestyle you have now, or lose it all for all time. Pick and choose wisely, for it is one choice made and forever done with in your and your prodigy's lifetimes.

Judging from your posts, you're familiar with the console radios of the 30's and 40's, even if you only owned them later on. Some of them used what the designers called an "acoustic labyrinth" in the cabinet - a "hallway" the rear wave of the speaker was sent through, emerging (usually) in the back or bottom of the cabinet, and in-phase with the front wave. The Bose radio design uses that basic principal in miniature. For a tabeltop radio, it has well-above-average sound, but it doesn't approach the sound of a good shelf hi-fi system, and is overpriced for what you get, IMO.

Tony

A communications receiver will be somewhat hampered in comparison to one designed for program listening. So here's my choices:

Of the communications receivers the Kenwood R-5000 produces enjoyable audio for program listening and does a superb job on voice communications.

One of the large Grundig Satellit models like the 650 or 3400 will produce very enjoyable audio for program listening with the built-in speaker alone.

The Panasonic RF-5000b is a very old 22 pound analog receiver that produces the mellowest audio I've heard from a solid state luggable radio. I honestly think it would lose something if the audio were sent to an external speaker or amp.

If we stop buying their bananas, they will suffer even more.
And we are not "carting them away". We are buying them. The point is
that their corrupt governments steal the proceeds from their own
people - and then put them in our banks because they can't even trust
their own.

>>Bono and Geldof are not right at all - they are simply skillful

>Fascinating.

Perhaps so. But in any case simple and logical.

I am impressed that you have at least paused and thought about it.
Most followers of Bono and Geldof don't use their brain - they only
make agreeable noises accompanied by ape-like body movements in the
general rhythm of loud repetitive noise that is made to pass for
"music". Very impressive indeed.

>>The West needs to make no excuses for living well - we have worked
>>hard many long centuries to achieve our standard of living. We are
>>always happy to help - as we indeed do. But to blame us for other
>>countries' failures, in this case for the obvious failures of Islamic
>>countries, is a bit too much.
>>
>I don't think they want our help. I think they want us to go away.

Yes, the Mugabes of this world certainly want us go away (so they can
steal from and enslave their own people with impunity) - but they
still do scream for more of our "help". The impoverished populations
are desperate for us *not* to go away. But we can't help them without
first throwing out their leaders, which would be kinda politically
incorrect and unpopular. That's why "gentlemen" such as Mr Mugabe can
continue destroying their countries with impunity.

I personally recommend that you go to these impoverished places (any
of your choice) and see the primary causes of poverty for yourself -
not through the politically correct pre-chewed-for-your-consumption
rhetorics of Mr Bono, but using your own brain and observation.
Perhaps you'll then change your mind.

really? I hate to say this, but *IF* there was such a terrorist act and *IF* said act involved a military jet (particularly one that was designed to be part of the nuclear transport/delivery infrastructure) then *SOMEONE* on the civilian side would probably know about it. you can't hide such things without incurring HUGE costs and our government (for what it is) is far too slow, lumbering and dumb to be able to cover up anything *this* serious for any reasonable length of time. I should know, I have family that works (or used to anyway) in government and thats pretty much their opinion on things.

do you know anyone (even a close friend) that works in the Government (and not the "friend of a friend" thing either)?

Do you know why governments are inherently stupid? the smart people will not run them, thats why!

most media outlets that don't have strong government control will place the story "out there" pretty quickly. as far as I can tell (and I have even called up a few folks I know at nbc and fox) the story as listed in the website previously posted is bogus. Hell, I even called the FBI on it to see if they had a comment. the guy on the other end of the line basically said "thats news to me!".

>
> or is that how they are being stoped the govt has confirmed it for them
> and thye are being contary
well, if they are being deliberately coy about it and it costs lives (we've all seen that happen with a major publisher already). you get the picture real fast.

the only places where I have seen the news media hold back are: totalitarian states, life threatening situations where reporting will lead to eminent death and a few other very serious matters. not reporting on a "near miss" of a terrorist act is a lot like ignoring a small fire in a trash can. all it will do is get larger.

/rant on
Besides, it isn't really the governments fault on this, its those people who inhabit the halls of power (and have done so through several

administrations) that need to be told to quietly leave, retire to someplace
in the country and don't bother anyone. The cold war has been long over, I
just wish some of these "behind the scenes" people would get it.
/rant off

MC is exactly right, I need Access 2002 Service Pack 3 in order to use he database.
Since updating MS products has been a hit or miss issue for me and others I know, when it comes to SP's, I'm going to pass. I'd rather have Access not be able to open one file than not work at all.

Thanks for the information about the Bose Radios.Yep,I too think they are overpriced.(if I see one at the Goodwill store,of course I will buy it for a few dollars) I own three old wind up Victrola style Phonographs.One of them is a floor model and it was made by a furniture company in Louisiana.One of them I think is a childs style of a Phonograph,it is small and portable and it has a sort of a cardboard "hallway labyrinth" that directs the sound around inside of the cabinet.About two or three years ago,I saw a Cambridge Radio at a local Wal Mart store,it was priced somewhere around $245.00.I think the best sounding Radios are wooden cabinet Radios with big speakers.

About a year or so ago,in Iraq,one of our U.S.Tanks got zapped by some sort of a weapon that burned a small round hole through the side of the Tank.Something like a laser beam or whatever it was.But the new ray gun uses microwaves to heat up the skin of people real hot like touching a hot light bulb.During the World War Two era,one of the Radars at a U.S.Base in Europe haden't been set properly and it was heating up the nails in an Aircraft Hanger.They started heating up and turning red and making a popping noise.Another type of weapon is sound energy,sonic sound,or some kind of sound,that can make people fall down in agony,it is a silent sound.I have an old Mechanix Illustrated magazine around here that dates back to around the 1940's or 1950's.The magazine has an article about that.

>
> Steve
>

Well Steve

it's too late for me. I already orded one from the Sharper Image. $500 plus $26 shipping and tax comes to a grand total of $563. They have a $20 off $100 coupon but wouldn't honor it for the radio giving me some excuse the "manufacturer" won't allow it. Nor will they honor the free shipping off $50 order. Problem is it's not online yet. Phone orders only right now.

What can you do. The good part is I have one on the way and have a local SI rifht near me. If I don't like it within 60 days, it goes back. I'm happy I orderd it. The radio does more for me then those pieces of paper called money. Plus, I hardly ever treat myself to anything good.
Hope it a good receiver!!!!!

Lucky

This "Davies is dead" rumor is driving everyone crazy.

We would like to enlist the services of your Athens, AL office to bring this thing to an accurate conclusion.

We're hoping for final results by Huntsville Hamfest, so we can hold either a celebration or a memorial service after the banquet.

If your staff could arrange accomodations for the "event", that would be helpful, also. It probably won't draw the same crowd as the Dayton thing, but we still expect a sizeable crowd.

Let us know so we can arrange the required retainer payments.

I would like to know your own definition of "affinity", but in its original sense, "afinity for your own race" is certainly not the same as racism. Racism is hatred for other races.

>That's why it's hard for white people to tell black people apart.

And hard for black people tell apart white people. But this has again absolutely nothing to do with racism; this is a well known and often described phenomenon which deals with the way our brain cognition processes work: Initially, we perceive only the most fundamental distinguishing features of objects (and people's faces). Gradually, when we are closely exposed to more such similar objects (or people's faces), when the fundamental distinguishing details are no longer sufficient, then we automatically add finer and finer details. As if our brain first tries to minimize the necessary amount of descriptive information attached to visual cues, only the bare minimum needed to enable us to distinguish one set of features from the other, then adds more and more as required for sufficient recognition.

For example, when I first saw an Asian, many years ago, I could not determine if I was looking at a Chinese, Japanese, Vietnamese, Thai or Korean, etc. - to me all Asians were looking the same. Now I can determine this very easily, in fact easier than (for example) a Vietnamese who never left his country. And as I have made more friends amongst Asians, and some of my best friends are in fact Asian, I have of course no problems at all distinguishing their faces.

>>>Otherwise, it's a popular perception.
>>

Damned if we do (help), damned if we don't. In Afghanistand and Iraq,
we certainly did. We can't do it all, and we can't do it all at once.

Yes fortran was/is very powerful. Was very easy to bring a high-end
mainframe to its knees with a few lines of code.

Former publisher of anumber of mags founder of byte and 73 and few
others.

a ham who has made a decent a living by getting to pay to read his
opinions (always a neat trick when you can manage it, but leaves one
open to con man challenges)

Personaly I liked reading his stuff, but he was as seems comon to hams
in general abit too into the conspircy theory

But his comment on leanring Code to get on HF are obselete (learn code
to use data modes) with the NPRM form the FCC. I am certain he would
agree no reason anymore

C/C++ alone puts the full power of any processor/system at your finger tips and full disposal--there just isn't any more...

Assembly is the same (since "C" is just a wrapper around assembly routines and code), however, any new hardware developed is immediately open to you without having to develop any functions, classes, etc to handle it...

There are/is no language(s) faster or more powerful, you can develop all the new syntax and cutsie languages you would like--you simply don't need them... but like an echo mike and talk-back, they can impress your good buddies (any language developed can be written, compiled and linked in assembly!)...

We have the equivalent of CB'ers in the professional hacking realms... they are just as stupid...
ROFLOL!

China Radio International partial data card showing the Leshan Buddha
received in 25 days for an e-mail reception report to crieng@crifm.com

The card did not verify the transmitter site

Frequencies by target area are here
http://en1.chinabroadcast.cn/about/frequencies.htm

Programs
http://en1.chinabroadcast.cn/about/schedule.htm

The link that says "download the Word file leads to an old schedule
which I didn't notice as being old until Valerie graciously pointed out
my error in this forum. I just checked and it's still the old file so don't
bother with it.

In the report I said I'd heard Noblejas, Spain but did not specifically ask for that to be
included
in the QSL. The back of the card is pre-printed with blanks left for them to put in the
listener's
name,
frequency, time and date heard.

My thinking is that for a Chinese factory to have the
QC necessary to properly supply all outlets with
a quality level approaching that from Universal or
Grove, it would raise the cost level of the product
to be in closer alignment with the SW8. Therefore,
my suspicion is that (at least for the initial shipments)
they did the two tiered system so that they wouldn't
completely lose their shirts on the Sat 800.

It says more about the (lack of) quality at the Tecsun
factory than anything else.

I wasn't making that mistake, I was thinking that the
"Grundig" name is, for all purposes, dead. The
Grundig name doesn't engender quality anymore,
like a German built car does anymore.

Except in the bottom line. Which they seem to have
done well enough to survive to creating the latest
batch of radios.

Unless its a marketing department that believes it's
own clippings. After all, Grudig had that legendary
quality to it, so why should they mention that it
was a Drake design?? Most people (non hobbyists)
would look at that and say "Drake who??"

Actually, some people have, but not in this case. I
was thinking of the strident ends of the spectrum in
the Sat 800 argument. You know, the ones who
think in black and white and "how dare you have
a different opinion".

> And secondly, you have been

> marketing strategies.

To be honest, the marketing hype notwithstanding,
a newcomer to the hobby shouldn't be buying a
$500 radio to start with anyway. They also shouldn't
be starting with a $50 cheapie, either. In my case,
my first radio was the old DX-440, which was good
enough yet cheap enough to make it worth my
while to fiddle with it and work the bands.

deceptive,
> without a peep out of the same people. Why the double standard?
> Deceptive marketing is deceptive marketing.

I would suppose that because the Radio-Mart
controversy continues to play itself out every
couple of months, that Radio-Mart has remained
on the radar longer.

Considering the Sat 800 topic comes up every
4-5 months, with nothing new on the horizon,
that the arguments have gotten to the point
that they've all been said before. Lately the
R-75 vs. R8B argument had supplanted the
Sat 800 one.

Usually this sort of business fad takes a few internal
hits before a company will change their minds about
it. Look at what happened with Bank One and IBM.
Bank One outsourced all their IT to IBM (including
all the personnel). IBM took the IT department and
proceeded to do what outsourcing companies do:
minimum effort -> maximum profit. Except that Bank
One couldn't do anything they wanted to do. Bank
One eventually told IBM to take a hike, and hired
back the best people from the outsourcing. More of
that sort of thing will cause big companies to think
twice about outsourcing.

(No, I don't work for IBM. I know people who work
at Bank One, or whatever the hell it's called after the
takeover by Chase.)

The Sat 800 had three bandwidths, Fast/Slow AGC,

Yea, I was buying CQ on the newsstand back in the late '60s after that
happened and they were trading nasty editorials. They canned his ass for
faking some pictures. Adding his call letters to a banner in a picutre
of a DXpedition that he really didn't go on (or something like that).

Interesting article about High Definition radio. The article ends with the following quote: "...eventually, stations will broadcast only digitally -- Stearn says that point probably won't be reached for 15 years -- and every radio you now own will become a useless relic that you'll try to unload on eBay."

Before you start selling all your analog radios, please understand that the speaker of the quote was Vicki Stearn, a spokesman for iBiquity, whose future depends upon HD radio becoming popular.

My guess is that analog radio will outlive iBiquity.

Yeah, I asked VOA to verify Morocco and they did. When I emailed CRI I thought maybe
mentioning
Noblejas would do it... but no.

IBOC was the dumbest idea ever. The NAB didn't want a regular DAB
type infrastructure because it meant every station had equal
facilities. Dumb asses. Now they have 250 new competitors in every
single market due to SDARS.

I'm definitely in. I'll share any expenses (retainer fees, etc.),
because we've got to get a definitive answer to this question.

Perhaps Bro. Davies had a coronary? Too many pizzas, maybe...Or,
perhaps he wanted "more louder signals" (sic) from his Tuna Tinny
so he connected the plate transformer from a Collins 21E?

At any rate, enquiring minds definitely want to know, Bro. El Dubyah!

Mr. Antenna Fetishist;

SDARS is the official FCC acronym for what is generically called
''satellite radio''.

IBOC is the name Ibiquity used for what they now call HDRadio.

That free shipping offer can be used if you tell them you'll order a $500 item only if you get that free shipping deal. Tell them paying tax is enough. That's you're not going pay for shipping also and to honor that coupon. So that should bring the price down to $535 with tax.

Well, after an exhaustive investigation, it would appear that portions of the rumors regarding Mr. Davies' employment and death are truthful.

He has been fired from his former place of employment, Papa Johns Pizza. The exact reasons haven't come to light as of yet, but the rumors of "secret sauce" and perversions with barnyard animals hasn't been ruled out as of the writing of this report.

As far as his death, those rumors have yet to be substantiated, but it does seem that Mr. Davies has been in seclusion since his termination of employment.

As far as the security for SacFest 2005, we will once again provide security for this annual event. The bill has been sent to your address Mr. Wright. We once again express our profound pleasure in being chosen to be your choice for security for this exemplary occurance.

We would like to remind you and other readers of these events, that Mr. Davies has been less than truthful of the actual events we have discussed over the telephone and on the internet.

Mr. Lawrence,

Need I remind you of what happened the last time Mr. Davies tried to
outwit our agency?

>Subject: Lewis-Louis agency shut down

>Date: 4/11/2003 1:39 PM Central Daylight Time
>Message-id: <3e9707f...@corp-goliath.newsgroups.com>

>AP Atlanta -

>In a early morning raid, members of the FBI and other government agencies,
>seized assets and files of the Lewis-Louis detective firm, one of the
>largest in the South.

>A Federal Judge ordered the raid and lockdown of the building, after a
>lengthy court case, started by Lloyd A. Davies and his brother Jim Davies.
>The Davies brothers, from Alabama, started a class-action lawsuit along with
>hundreds of other people who had been the victim of libel and their lives
>destroyed by the false and harassment by the firm.

>"My Husband lost his job to those two bastards" Jane Hill, one of the
>plaintiffs, Mrs. Hill is also suing for wrongful death, in which she claims
>her husband committed suicide because of Lewis-Louis.

>Along with building seizure, internet access and e-mail have been shut off
>and the personal assets of Lewis and Louis have been frozen. "This may be
>extreme action," the Judge said, "but we are in extreme times"

>--
>Lloyd/N0VFP
>"Finest No-Coder to key up a handier talkie"
>Ft-817, ARTS 909

>Well, well we hear once again from Mr. Davies, one of the most unsavory

characters we have ever investigated.

Let me set you straight Mr. Davies.

1. We are not and have not been closed, or investigated by the FBI as
you
claim.

2. The Davies brothers do not exist, as witnessed by your own admission
that

Jim Davies was a phony name made up by you to "scare" some people off. I can
post your letter on this if you wish.

3. Jane Hill has filed a lawsuit as you are well aware of, as you are named as
the "reason" her husband committed suicide. You and the late Mr. Hill were
involved in a homosexual relationship and the word leaked out to his place of
employment. He then unfortunately committed suicide.

4. The building is owned fully by us and is open to the other 83 tenants who
rent from us.

5. We have had lawsuits filed against us from time to time due to the nature of
our business. Scorecard to date. 18 filed, 0 won. We prevail as you can see.

6. I would suggest, that you think twice before you try to outwit people who
are smarter than you Mr. Davies. You own nothing now, but you could wind up
owning even less if you are foolhardy enough to continue with your foolishness.

Best Regards,

Hmmm...

Just rumors most likely...

Such as the rumor that he is now serving time in a federal penitentiary for installing a 12V battery in a 100 milliwatt walkie talkie which is only type accepted if used with 9V.

Just a rumor, I am sure...

I once read that coloidal silver can mess you up if you aren't carefull with it.An old guy who used to work at Delta Cotton Oil used to wear a piece of copper wire around one of his ankles.He said it was for draining off static electricity,he pronounced it,elecstwicty.Many years ago,some folks would attatch a piece of chain underneath their cars and trucks and let the other end of the chain drag the road.To drain off static electricity,I suppose.

SANTA FE (July 24) - Actress and activist Jane Fonda says she intends to take a cross-country bus tour to call for an end to U.S. military operations in Iraq.
"I can't go into any detail except to say that it's going to be pretty exciting," she said.

Fonda said her anti-war tour in March will use a bus that runs on "vegetable oil." She will be joined by families of Iraq war veterans and her daughter.

They plan to return to the Santa Fe area where she was promoting her book, "My Life So Far" on Saturday.

Prompted by a question from the audience, Fonda said war veterans that she's met on a cross-country book tour have encouraged her to break her silence on the Iraq war.

"I've decided I'm coming out," she said.

Hundreds of people in the audience cheered loudly when Fonda announced her intentions to join the anti-Iraq war movement.

"I have not taken a stand on any war since Vietnam," she said. "I carry a lot of baggage from that."

Fonda incited controversy in July 1972 when she was photographed sitting on a North Vietnamese anti-aircraft gun while on a tour of the country to drum up support to end the war. She has repeatedly said she did not mean any harm by the photos. Earlier this year, a Vietnam veteran spat in her face at a signing.

But, except for one booing audience member, the reception was friendly in Santa Fe. More than 500 copies of her book were sold.

Charles Powell, a member of Albuquerque's Veterans for Peace, said he believes Fonda's actions in Vietnam should be forgiven.

"We accept her apology and feel that she should be treated like a human being," Powell said.

In that case, do you believe that your race is inherently superior? In
which particular regard(s)?

We are a significant part of nature, and we are certainly living in
harmony with it, precisely within our means, perfectly sustainably.
All that noble leftie talk about "unsustainability" is pure hogwash -
designed by power and publicity seekers to make us feel guilty about
ourselves.

Take it easy and enjoy life: It is surely better than it ever was, and
it is getting even better. And do something more productive than
beating everyone around yourself and preaching guilt, loathing and
hatred.

Cool. The 2K version works great with one glitch. In 'edit personal details' I can't delete
your
antenna info.
New entry for mine goes in and can be deleted, your other info can be deleted/changed. Just
can't
get your
antenna out of the list. Otherwise perfect after quick testing.

BH:

Yes, I have been trying to tell these guys.

Thank goodness you have seen the truth. That colloidal silver junk is a farce.

What you need is the special tin foil hat I am selling (still trying to get on art bell to go national sales), I bless everyone by making the sign of the cross over it and package everyone in special plastic shielding so the aliens are unaware they are being shipped, a mere $9.99 and one of these sweet babys can be yours!

One of the things that appeals to me about a radio design is it user
friendliness...The older SAT 800 appeared at least ready to run without
the "destructions"

THIS one looks very unfiendly. I agree it will suffer poor buyer
response from the O.F.'s....

The techie kids might eat it up but they aren't trending towards SW
interest anyway, and it doesnt have a CD burner so it's DOA

>>
>

That's why even though this administration has troops all over Afghanistan, a **bumper crop of heroin is harvested and sent into the inner cities to minorities and others. When both bush and cheney were asked why this is so, they kept their mouths shut and did not utter ONE WORD in response. Yes, we have honest great leaders don't we??

They ruin more Americans lives then our enemies do thru these means and others like wide open borders while we hassle people for nailclippers on planes. You people that like and follow this administration have to be the biggest low life lead sheep I've ever seen in a long time. Now go plop that

bumper sticker "I support our troops" on that 4 ton SUV you drive....

Yes Clyde welcome to the real world

Is that the 'real world of Florida'... the State where the Democrats haven't yet learned how to vote properly?

6109. Worldstar radios

Newsgroup: rec.radio.shortwave

I'm intrigued by all of the Worldstar multiband radios on eBay, some of which seem to also be sold under the Reader's Digest label. They often go pretty cheap, and I'm wondering if they would make a decent garage or camping radio. Are these things any good, or are they complete junk? Curious that I can find no specs, reviews, or other information anywhere on the web.

Jeff

Yes I remember it in point of fact,but that was an action by a
president not some senators

I see you like Rove the homosexual that had a ex gay GI visit him numerous times at the white house. He didn't even need to sign in. He had the freedom to come and go at will. This was questioned on the news but quickly covered up.So I can see why you defend this faggot so well. I like your circle of friends...

Lucky

Yeah, right...and thanks for the chuckle!

Pardon me if I respectfully decline to have a big-brotherish, self proclaimed "ace" try to "save me from myself".

You've been dancing all around the issues (rudeness/vulgarity/name calling/disrespect) without specifically addressing them, but rather talking about "motivation", "living their lives not based on public approbation" and other bogus blather, but at the end of the day--rude is still rude and vulgarity is still vulgarity--, no matter how hard you try and spin it or ignore it. One's mommy should have taught this lesson years ago.

Sorry, I was not brought up to believe that these are desirable qualities in a human being nor that those qualities are conducive to open discussion.

Bottom line--you seem to be trying very hard to defend rudeness, disrespect for others, name calling , vulgarity and general oafish behavior.

Therefore, at best, it looks like we can agree to disagree...You just keep defending the low road.

Have a nice day!

And your point is??? They (and/or their ilk) were "hiding in the hills"
for ten years, all the while making mince meat out of the Ruskies.

How quickly we forget...

Those radios aren't much good.Sure,they look good and everything.About three months ago a lady at the Goodwill thrift store bought one of those radios,it looked brand new.I plugged it in the wall outlet at the store and turned it on.It had an antenna on top that can be rotated around and around and several shortwave frequences and am and fm and tv band and weather band and I don't remember what or if it had some other bands.It had a couple of military style handles on the front face of the radio.That radio wouldn't hardly pick up any stations worth a crap.Save your money and buy a decent radio.

> 214 lists a Silver Star with Combat V. How did he get that??

That's easy -- a clerk trped in on his DD-214. The same way a clerk put
down the wrong birthdate on mine.

It doesn't mean I was born 20 years later than I actually was, the same
way it doesn't mean Kerry was awarded a Silver Star with "V".

Everyone knows he has a Silver Star. Plenty of people were present for
the action for which is was awarded, and even more were there when he
received the award. There are no photos of him with that "V" on his
award.

It's a non-issue . . unless, of course, you don't like Kerry. In which
case, every minor detail about his paperwork is nitpicked to death.

BMC,

>It was revealed today the guys visitors permit had expired two years ago ! I
>guess he had a reason to run !!

It was AFAIK a student visa.

These last for typically one year however one can get an extension for a further year by showing proof that ones college fees have been paid in advance.

After that period though one 'normally' has to return to ones home country.

One exception is if one can find a sponsor and a good lawyer to receive a work permit but this must be impossible for an 'electrician'.!

My 2p is that some of this is a government, media, police BS smoke screen for killing an innocent person.

I think they call it 'damage limitation'.

I hate to think what fallout there would of been had the guy been a Muslim.

It's a non-issue if you like John 'Fraud' Kerry.

It's certainly an issue if he bragged having the Silver Star w/combat V on his website!

Source record: 29581

Jane Fonda visited Hanoi during the Vietnam War, at which time she accused American soldiers of acting as "war criminals"

Claimed that if Americans understood communism they would get down on their knees and pray for it to come.

What Fonda did, in fact, far exceeds the actual conduct and activities of some of those who were convicted and imprisoned for their treasonous activity in World War II.

By the time Fonda left for Hanoi, she was already immersed in the radicalized New Left culture of the late 1960s, and had already issued statements accusing American soldiers of acting as virtual "war criminals" who routinely tortured, raped and murdered innocent Vietnamese. She then joined forces with Tom Hayden, who had moved his activism in the direction of creating his own new anti-Vietnam war organization.

Fonda's activities took place in the context of the vicious and inhumane treatment of American prisoners of war - treatment that violated every main tenet of the Geneva Convention, and which was on the level of the treatment given to concentration camp prisoners by the Nazis, and to World War II POWs by the Japanese. It was, as one former prisoner recounts, "a nightmare of hellish proportions that transformed civilized human beings into primal animals struggling to cling to some fleeting sense of what it means to be alive."

[The Leftwing in America never protest against the enemy Communists in any conflict, NEVER!]

Fonda attended forced and staged meetings with American POWs, who refused to cooperate or talk with her, and who went out of their way to ignore the pleas of their captors to acquiesce in the propaganda. Nevertheless, Fonda immediately went on the air and lied about her meetings, presenting phony stories about how well the captured troops were being treated at the infamous "Hanoi Hilton" POW camp. "They are all in good health," she said in yet another broadcast; "We had a very long.very open and casual talk. We exchanged ideas freely," and these men told her about their "sense of disgust of the war." None of what she said, of course, had an ounce of truth to it. As the Holzers put it: "These lies were simply more canned North Vietnamese propaganda, broadcast in furtherance of Fonda's intent to damage the United States and help the North Vietnamese."

What she did was sordid, vile, unpatriotic and unconscionable, and as the Holzers write, "beneath contempt." She could have been indicted, and a jury of Fonda's peers would have had the opportunity to judge her actions.

Her activities clearly fit the bill of giving distinct "aid and comfort" to America's enemies. It demoralized many of the soldiers, made things worse for the POWs, humanized the enemy to Americans at home, and gave the Hanoi regime confidence that it should hold on in the face of battlefield reverses, because propaganda such as that by Fonda would eventually allow them to gain the upper hand. We read the words of analyses by propaganda experts of her words, which makes it clear, as one former Brigadier General wrote, the intent of which was "to demoralize and discourage, stir dissent, and stimulate desertion."

While on her book tour in Kansas City, a Vietnam veteran spat tobacco juice in Fonda's face. The man, who had waited in line for 90 minutes to meet Fonda, later told reporters that the actress/author was a "traitor" who had been spitting in the faces of war veterans for years, and that he had no regrets about what he had done to her: "There are a lot of veterans who would love to do what I did."

Now, decades after Jane Fonda's trip, Henry Mark Holzer and Erika Holzer, both of them writers as well as lawyers, have published a book that seeks to make the case that in fact, Jane Fonda engaged in acts that make her guilty of the actual legal grounds for treason, which as laid out in the Constitution, defines the act as "levying War against them, or, in adhering to their Enemies, giving them Aid and Comfort." To be found guilty, a person had to have two witnesses to the overt act they committed, or have made a full confession in an open court.

In their book, Aid and Comfort:' Jane Fonda in North Vietnam (Jefferson, North Carolina: McFarland and Company, 2002. 206 pp. $39.95), Henry Holzer makes it clear in his introduction that when he began his book, he too had no opinion about whether Jane Fonda had committed treason when she traveled to Hanoi in July of 1972. He decided to take a closer look at the actual text of her propaganda broadcasts made in Hanoi, what she said and did during her visit there, and what effect it had on those GI's who were being held as POW's. His conclusion was simply that there was "enough evidence to submit to a jury, that the jury could have convicted her, and that a conviction probably would have been upheld on appeal." Of course, not only did that not take place, but Jane Fonda went on to resume an illustrious career in Hollywood [always was a bastion of Communists - read the book Red Star Over Hollywood.], has received numerous awards, and has become, as Holzer writes, "an American icon."

The Holzers' book, then, is written as an attempt to pursue justice. For this reader, the first part of the book is the most compelling, and indeed, a harrowing read. What the Holzers reveal is the full story of the torture, degradation and violations of common humanity inflicted upon American POWs by the North Vietnamese Communists. Of course, reports of this have been made by some of those who suffered directly. But with the attention of Americans and the media at the time, and long after, on the horrors of the war, somehow or other, the story of what happened to American prisoners of Hanoi got lost. The Holzers shed more light on this, and bring to the story the sordid role played by Fonda in responsibility for the misery they suffered.

>>>
>>>Of course not.

"Of course"? That's really good. In that case, how do you justify your
earlier statement about "crazy white guys"?

>>We are a significant part of nature, and we are certainly living in
>>harmony with it, precisely within our means, perfectly sustainably.
>>All that noble leftie talk about "unsustainability" is pure hogwash -
>>designed by power and publicity seekers to make us feel guilty about
>>ourselves.
>
>That sounds faith based.

Firstly, it is up to those who make claims for us to be blindly
believed such unsustainability, the benefits of this mysterious
"harmony with nature", etc., to prove they are not faith-based. I
don't make any such claims which would require a proof. The onus of
proof is on the other side.

Secondly, there is a lot of objective scientific evidence to show that
all this fashionable alarmist talk about unsustainability is a
hogwash, and the romantic notions about "harmony with nature" are not

grounded in reality (and never were at any given time in the past).
But I am sure you would not want to hear the truth.

There are many folks who seem to loathe the society they are living
in, yet enjoying all its benefits; full of a pent-up anger and
inferiority complex, looking for an outlet. If you ever develop a
heart problem, I suggest you to go to a witch doctor, perfectly in
harmony with nature. Just avoid the "crazy white guy's" science at all
cost.

>>Take it easy and enjoy life: It is surely better than it ever was, and
>>it is getting even better. And do something more productive than
>>beating everyone around yourself and preaching guilt, loathing and
>>hatred.
>>
>You are living in a fantasy construct.

It would have been enough to say simply "you are living in a fantasy",
or "you are living in a fantasy world". But you just had to use the
oh-so-fashionable (in the leftie world) word "construct", didn't you.
It makes you look oh-so-smart!

I guess it's OK if you are content to *look* smart instead of *be*
smart.

As usual, you give yourself waaaay too much credit.

Big?

Bad?

"ace"?

Hardly...(but 3 strikes in one sentence aint bad!)

Hallucinating again, are we? Or just becoming a legend in your own mind? Or just being your usual childish self with your usual canned/stock/unimaginative replies. Sheesh, you are sooo predictable.

> You just run along and find someone to talk to on 2-meters.

Huh?

I'm not sure why 2-meters is germane to this discussion. However, seeing as you brought it up, I'll give you a polite response (foreign concept to you, I know): The only 2 meter operation I'm considering (other than a little mobile) is going over to a friend's house to try some meteor scatter during the Perseids shower in mid August. The vast majority of my ham operating is RTTY or CW on 160-10 meters, chasing DX or contesting.

Continue having a nice day!

He did no such thing. Many of his records were posted on his website.
Those records included his DD-214 (I assume you know what that is), and
on his DD-214 a clerk had typed: Silver Star with "V".

In fact, the actual medal, and accompanying citation, do NOT have a
"V". The Silver Star is in and of itself, for valor.

It's a non-issue.

Why don't you post what he said, in it's entirety?

And then people can make up their own minds as to whether he was
admitting he was a war criminal, or whether you're just guilty of a
little over zealous spin.

I was looking into the Tecsun model myself. I've read that the BCL 3000 only goes up to 1610 KHz on the AM band. You already mentioned it's only available in black with Chinese labeling. The radio doesn't come with ear phones either, they must be purchased separately -- unlike the Eton S350DL that includes nice headphones.

There are a couple of sellers on Ebay that offer free shipping for Degen DE919 earphones and a Degen DE31 loop antenna if you include them in your purchase along with the BCL 3000.

If you are patient and opt for ground shipment, the Tecsun is a very good value at almost half the price of the Eton version. I'm just concerned if the radio goes south, it's game over because the warranty repair return shipping would be very expensive due to the weight and size of the radio. It's too bad that Tecsun doesn't offer a small insurance fee that will cover part of the shipment expense in the event of a factory defect. If that option were available it would clinch the deal in a heartbeat!

Oh, thos iBoc folks.....I called them about a year ago, asking them about their system. When they explained the virtues of their system, and what a good deal it was, I asked them how they were going to handle the multipath effects of evening propagation. I also explained to them that I didn't thing it was such a good for people to actually have to pay money out of their own pockets for a system that actually takes three channels of spectrum space for one of their transmissions.
They never did respond to my e-mail. I guess they didn't have an answer. Might have been too busy paying Vicki Stearn.

Ever since Clear Channel went in big for IBOC, I've suspected broadcasters were really after the extra channels on the same license. The story sort of confirms it:

"The big draw will be multicasting, the additional programming that digital technology creates: Every station now on the FM dial, whether commercial or public, will be able to add a second channel, and possibly a third."

I suppose the same thing could be done with AM, two or three channels for each station, although I don't know if the current IBOC radios are capable of such multichannel reception.

I don't know if ibiquity will fail. High fidelity broadcasting has been mostly one disappointment after another. But, if ibiquity has figured out a way for broadcasters to increase revenue, they will succeed.

For the time being, AM IBOC stations are turning off their noise machines during the night. I'm sure they don't intend that to be permanent.

It's curious that the FCC reduced the AM bandwidth to reduce interference when they increased the number of stations allowed. Now they're allowing this ultrawide band system to pollute the spectrum.

My guess is the new high power X-Ray scanners in use at airports
to scan baggage for bambs and such instead bombarded your
radio with so much x-ray that it fried the semiconductors in the radio.

My advice: File a claim for damaged goods to the TSA at
http://www.tsa.gov/public/

Military regimes favoring Islamic-oriented governments have
dominated national politics since independence from the UK in
1956. Sudan has been embroiled in a civil war for all but 10
years since then. The war is rooted in northern economic,
political, and social domination of non-Muslim, non-Arab
southern Sudanese. Since 1983, the war and war- and
famine-related effects have resulted in more than 2 million
deaths and over 4 million people displaced. The ruling regime
is
a mixture of military elite and an Islamist party that came to

power in a 1989 coup. Some northern opposition parties have
made common cause with the southern rebels and entered the
war as part of an anti-government alliance. Peace talks gained

momentum in 2002-03 with the signing of several accords,
including a cease-fire agreement.

Oh, good, I can hardly wait for the Hanoi Jane entourage to show up in
my city for anti-Iraq war demonstrations. Say, I have a better idea,

why don't they drive their environmentally proper vegetable-oil-burning-bus to Iraq, settle in with some of the insurgents and maybe set up a bookstore. Yes, I can see it now. In some bombed out shell of a building a new beginning: Fallujah Jane's Mostly Used Books, J. Fonda, prop. All fading traitors should get one more chance to replay their moment of notoriety. I think I will plan a vacation in some other state.

BTW, I disagree with the reasons used to justify our being in Iraq, but would never see Hanoi Jane as a spokesperson for those who oppose our current involvement.

An Objectivist, meaning a follower of Ayn Rand? Or merely a secular
humanist?

Hmmm...

I like Michael Savage.

He is direct, to the point, a doctorate or two to his credit, and he is an "equal opportunity insulter" of the public!

One could make an equally illogical connection between the Catholic
Church and the IRA.

I don't know specifically about the Tecsun, but many radios have a ferrite bar antenna which is mounted from one end. A sudden jolt might crack one of the solder joints or pads at the mounting end. If you're able to disassemble the radio, it's pretty easy to check. A little re-soldering might fix it.

David:

You have two choices, either a creator made us, or we came from a mud puddle. There are problems with both of these:

1) If we are the product of a creator, we would be expecting angles.

2) If we are the product of a mud puddle, we are waiting for an alien. As obviously, there are millions, perhaps billions of planets out there with mud puddles on them, and some were probably able to crawl out of those mud puddles before we got our start here.

I went looking for Radio Tanzania Zanzibar's English news at 1800 on 11735 and at first thought they had dropped in frequency to 11734.9 or so but was surprised to hear the presumed Brazilian R. Nova Visï¿½o there very weak in Portuguese.

No trace of Zanzibar here.

Happened around 87-92, mainly late high school and
college age people, and was probably triggered by all
the "Summer of Love" retrospectives and Beatles
shows on television at the time. The Val Kilmer movie,
The Doors, probably helped feed it too. The movement
really didn't stand for anything other than acting like
a hippie and thinking you were cool for doing so.
Grunge swept both the pseudo hippies and the LA
metal sound out from the public's eye.

There's an an ancient intelligent piece of DNA floating around, to be
sure.

People were on this planet for 100s of thousand of years before some
asshole thought up ''God''. Since then its been all down hill.

David,
.
Here are two "Add-On" Speakers for most Recevivers :
.
The Hisonic HS-668 Sound Studio amplified stereo speaker
is excellent for use for multi purposes including boosting
the sound volume and improving the audio quality of amatuer
radio transceivers and receivers.
http://www.radios4you.com/hs668-soundstudio-LG.html
.
Sounds Sweet communications speakers maximize intelligibility
from your transceiver, receiver or portable.
http://www.soundssweet.com/
.
These and a Hearing Test will save a few dollars
and let you Hear-All-You-Can-Hear !
.

Expressing your view and committing Treason (Fonda), Terrorism, Murder,
etc., are completely different issues.
Or don't they teach you that in your country?

The poster expressed his view which is allowed under our Constitution.
Do you have a problem with him expressing his view because it is contrary to
your own?
That could be construed as being dictatorial. Is that the founding
principle of your country?

Regardless of which camp you sleep in, it seems that life, any kind of life,
is exceedingly rare.

Long distance human space travel through the extreme hazards and vastness of
deep space is all but impossible.

Attempting to accelerate and maintain a speed that would make long-distance
human space travel to even the closest solar system in a reasonable
timeframe would require ever greater amounts of energy that would be
impossible to store on a spacecraft.

However, if we can develop an instantaneous form of communication as well as
a highly intelligent form of surrogate human robot then perhaps, perhaps we
may have a chance to hunt down our MaMa and PaPa and sue for abandonment and
child support.

www.ccrane.com sells them and www.jr.com sells some Sangean
radios too. www.rense.com has (or used to have) a link about
modifications for Sangean radios,or maybe it was at
www.coasttocoastam.com where I once saw that link.A
www.devilfinder.com search for,Sangean Radios might turn up some more
links.I have read a few times before though that the LCD display panels
on those Sangean radios don't hold up well.I bought two Sangean radios
about seven years ago.I sent them back to Bob Crane because in my
opinion,they are over priced and not any good.

I don't see why I should even bother answering an article that starts with a quote of Karl Marx! Anything this man has every said has been discredited in practice, and millions of people suffered in the process. Anyone who still seriously believes in the dead horse of Marxism has no brain left.

Let me remind you that I started this thread with Churchill's comments about Islam. You then retorted with a derisive statement of "crazy white men", presumably in defence of Islam. Now you turned to dying trees and environmentalism. Just another convenient way to badmouth those "crazy white men" who brought us the very civilization that feeds you and that you just love to despise, right?

You should really look into the mirror and admit to yourself frankly why you hate civilization so much. You feel left a bit behind, don't you? Some deep-seated inferioity complex perhaps?

Ah, about those dying trees, all you romantic tree huggers should read this: http://www.lomborg.com/books.htm
(But I don't really expect you to believe it - of course, it was written by a white guy.)

Peter Newman

Message-ID: <1122421168.896136.65910@o13g2000cwo.googlegroups.com>
Source record: 29748

The AP and UPI reported that the French Government announced yesterday
that it had raised its terror alert level from "Run" to "Hide" after
the recent attacks in Great Britain.

The only two higher levels in France are "Surrender" and "Collaborate".

The raise was precipitated by a recent fire which destroyed France's
white flag factory, effectively disabling their military.

So why did I send them back? Glad you asked.The first one I bought from www.ccrane.com (by the way,their website is down right now for maintance) was the one with AM/FM/Weather and a couple of tv bands.That radio didn't impress me at all,Period! At the same time,I bought one of those antenna booster thingys with the round knob in the middle of it,it made absolutely no difference at all with helping to pick up long distance AM stations,I sent it back too.(and the sound quality isn't all that good either) The second one I bought from them was an ATS 909 and I even paid about $35.00 extra for the fine tuning thingy (or whatever they call it,I don't remember if it was on that radio or the other radio) That radio didn't impress me either,Period!.If I ever buy another Sangean radio,it will be at the Goodwill thrift store or a similar store.

The military is just waiting?

Krist they so picky they can't choose from the hundreds or thousands already ready and hoping...

I mean, when I worked for a defense contractor, clear back in the 80's, many of my colleagues had kids they were trying to get into good decent military positions. Can't imagine it has changed all that much, or that suddenly there is a shortage! They were griping that not enough pilot positions existed!

You can distinguish a plainclothes cop from a thug with a gun or an ordinary citizen with a gun? Care to put your money where your mouth is? I hate to tell you, Beast Master, but anyone with a sense of self-preservation will run with they see someone with a gun and without the uniform pointing a gun in their direction. The truly crazy ones would run from an uniformed cop with the gun pointing their general direction.

Is it true that Blueberry's name is now Dingleberry?

I have an ATS-606A that is a very good performer, especially with
headphones.

The better the built-in antenna, the less improvement you'll notice
with one of those external tuned passive booster things.

No it doesn't. Asd I mentioned in an earlier reply, he wasn't awarded a
Silver Star with "V". That's just what a clerk incorrectly typed up on
his DD-214.

The award, and the citation, have no "V".

Perhaps, but why didn't you post what he said?

And why didn't you tell us what was faked (another post/reply) in
regards to his medals, since you're the one who pays attention to
detail . . . and I, supposedly, don't?

Please, if I'm so clueless, why don't you educate me? Educate everyone
else, too, while you're at it.

6278. How to learn more about am tube radios?

Newsgroup: rec.radio.shortwave
Date: 2005-07-27 03:14:50 UTC
From: newbieguy <geepondy@hotmail.com>
Message-ID: <qvude1pu3sifvfehfaknue605cqp7bpfhe@4ax.com>
Source record: 29868

When I was a kid, I used to listen to my grandfather's AM tube radio. It was a breadbox sized Philco, I believe vintage 1940s. It had excellent reception and excellent sound due to a big old 6x9 inch speaker on the bottom. I would like to get me a am tube radio. I see lots on ebay in various conditions, many pretty cheap. But I know nothing about them, what is good and what is not. Where can I learn more?

Islam like Christianity has many versions

And We must be careful not to brand all Muslims as the root
cause..... but focus on
Wahhabi Islam.

The continuing American support to Saudi Arabia is
puzzling

Not only do we have to watch the Americans do nothing about Saudi
Arabia the home of Wahhabi Islam we also have to put up with their
allowing Wahhabi Islam
Preachers to travel to Australia to promote shit

I dont know where the latest one here in Sydney preaching Wahhabi Islam

came from in the USA

But I Think it was Atlanta ...

We could ask the Americans to give Atlanta the falujah Treament on his
return

Yes...look youd get rid of a few of the real troublemakers

Pity about the other innocent residents

They got caught in Cross Fire

I don't own one,but from what I have read of people's comments before in this news group about the Sony 7600 GR radios,I think they are a good buy for $149.88 at www.jr.com Most of my old radios I own do a good enough job at picking up radio stations for me.Last year I bought a Linksys Wireless B Music System internet radio.I use it wirelessly around my house and I can use it up to about a 100 feet away out in my yard if I want to.I bought it for about $149.00 at a wal mart store. www.devilfinder.com Linksys Wireless B Music System

rec.antiques.radio+phono is the newsgroup for you, a great place
to talk about old radios such as that.

Of course, for old shortwave or amateur radio receivers, there's
also rec.radio.amateur.boatanchors

This .sig file will continue until Mister Fort posts a sincere apology to all cancer victims and their families. His refusal to do so says more about his attitude and upbringing than any of his thoughtless and hurtful postings in rec.radio.shortwave. He seems to be very proud of the fact that he can buy expensive radios using the refunded deposit money from his empty beer containers and has frequently posted the fact. It appears he is well on his way to purchasing his next radio. Anyone caring about his well-being should mention the good work of Alcoholics Anonymous to him.

it has the speaker and case of the 350 and the electronics of the 350DL. I am sure this is by agreement of Tecsun and Eton to prevent people getting around buying the 350DL from Tecsun

I wonder how much of a difference the 3/4 inch on the speaker makes.

6298. Panasonic RF-2200 for sale

Newsgroup: rec.radio.shortwave
Date: 2005-07-27 04:42:03 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <J6SdnfSk-MABjXrfRVn-jQ@comcast.com>
Source record: 29887

the RF-2200 has been rated one of the best MW sets by many reviews. it also is a very FUN set to use and works very nicely on SW. overall it is a great set. it is also what the S350 was modeled after but without doubt the 2200 is a better set. the 2200 has super smooth tuning (always use the fast speed, forget the slow speed) and the 350 has a rubbery feel
since I have 3 of these I want to sell one and here is your opportunity to have one for the price of an S350DL !
this one works great, all functions work as they should and the rotating gyro MW antenna digs out the MW DX !!! and except for a not that bad mark on the speaker grill is in pretty nice shape.
there is a user group on yahoo for the 2200 and a web site with the user manual
Price is $150 plus shipping.
email me direct !

Even without the "V" it still reeks of shenanigans... as do most of his medals.

And Kerry DID have that DD-214 up on his website with NO explanation about the "V". Why? Because he thought we were all suckers, that's why.

Guess what? We're not all suckers, and John 'Fraud' Kerry, thankfully, went down in defeat.

Get over it, 'tard boy.

In a related story by Reuters, it was noted that this is only the
second time since WWII that the terror alert level has been raised this
high. In the only other such incident, two men were captured in a Lyon
hotel room with two cases of California wines, and suitcase full of
Velveeta.

OK, the E1 is now on the Sharper Image web site but you have to do a search for "shortwave" to bring it up. There are two coupons but it looks like only the free shipping one works which is the best one anyhow. You save the most since shipping is like $26-$30. PLus they have them in stock. I ordered on Mon, it went out yesterday from Arkansas and will be here this friday!!!

Here are the coupons guys. First click on the coupn itself and it will open up the SI website. Then do a search for "shortwave" and order. The shipping will now be free. Have fun.

$20 off $100:
http://www.sharperimage.com/ls_0805_20off100/

Free shipping:
http://www.sharperimage.com/ls_0805_fsh50/

IMHO she should not have been allowed back into the country. I'm not surprised Hollywood accepted her back and made her rich. Now, even IF the war was wrong, you don't do what she did. You fight the war at home and protest, not use your fame to show the whole world how you feel and disrepect the country, the soldiers and the American people. How she was not severely "injured" when she came back is very surprising. I guess people didn't want to lower themselves to less then her level.

They're wannabe hippies attracted to the colorful clothes, flower power language of the 60's and early 70's and grainy movies of happenings at outdoor rock concerts. What they were missing was the reality of a portion of a generation of kids caught up in a lot of drug use (opening ones mind) and living in truly deplorable conditions (communes and Haight-Ashbury). Fortunately many of them grew up and became contributing members of society.

Check out:

http://antiqueradio.org/

Also, consider visiting a Salvation Army type thrift store. Tube radios
show up from time to time. Around here, the small tabletop tube radios sell
around 5 or 10 bucks.

As has been said already, the UK has no input into the policies of other C'wealth broadcasters, except in the discussion sense in which they may be said to have an input into those of the UK.

In fact, the core Commonwealth (good expression, by the way) countries _do_ have something _very much_ like US independence. The only difference is that the constitutional figurehead in all of them happens to be the same person, a fact which can easily be changed without reference to London -- as happened in India, Pakistan, South Africa, Zimbabwe, etc. There is no kind of measure which can be taken by the UK Government which has any legal force in those countries; and treaty obligations between them work in exactly the same way as treaty obligations between, say, the US and Canada.

I get over to the Goodwill thrift store every day around noontime.There are two other Goodwill thrift stores and a Salvation Army store and a Rescue Mission thrift store in the metro Jackson area and a lot of other junk shops and fleamarkets too,but I am not going to be out driving around town everyday looking for bargains,I have too much junk here anyway.Another good place to look for tube type radios is at the yard sales and the classifieds in your local area newspapers and online newspapers. www.kidon.com links to all of the online newspapes and many other news sites,radio and tv around the World.The Goodwill thrift store I go to every day (except when they are closed on Sunday's and hollidays) is only seven tenths of a mile South of me and the radios there sell from $2.00 to $4.00.You can also post notices on bulletin boards for old radios.One of the local freebie classifieds physical newspapers around here is www.americanclassifieds.com There used to be another one called Thrifty Nickle but I haven't seen that one in my area in a long while.They might have went out business.

>That's pretty wack.

Go back to point #1 above. What you replied makes no sense whatsover
in the context of this discussion: I did not go to any war for
petroleum, and petroleum is certainly not an instrument of my demise.
If you meant to say that the US (or all "crazy white men"?), then
exactly the same applies.

Let me also suggest that you stop driving a car, don't use any public
transport, immediately switch off any electrical appliances in your
home, including your computer.

I wonder where you live. I bet you live somewhere where you don't have
to work too hard, thanks to the very civilization that you hate so
much. You know what? You are simply bored. Move somewhere where you
will need to work really hard in order to be able to eat and have a
decent roof above your head. Then you will see things from a different
perspective and take fewer things for granted.

#2:

>
>Written by our best scientific minds.

Says someone who really desperately *wants* to believe this
politically correct crap. You are simply seeking justification for
your anger and hatred, whose real reason is your very own inferiority
complex - just be a man and admit it to yourself.

Buy the Lomborg book and get the *real* story, from a *real*
scientist. I promise this will be an eye opener for you. But I guess
you don't really want to open your eyes, do you. You like it better
this way - the more alarmist, the more apocalyptic, the more proving
of your "crazy white men" crap, then the better it feels, because you
just like to wallow in that negativity, like a pig in shit, don't you!

I started this thread talking about Muslims. But you are talking about
deforestation. I guess you don't realize that by desperately searching
for any suitable negative subject to justify your initial "crazy white
men" outburst, you are precisely confirming what I am saying - you are
entirely messed up. I hope it is not too late for you. You *can* fix
your brain up, but first you do need to be honest to yourself.

Firstly, in a thoroughly corrupt country (like most countries in Africa are), corruption is a way of life, hence even NGOs will be, and indeed are, corrupt and inefficient - they are not staffed with angels, but with real, local people.

But this is not the most important point. The main point is that throwing money to the poor has never made them rich in the long term. It just makes the situation worse by making them dependent on handouts. To make them truly independent and thus conquer poverty, you need to get the economy going and teach the people how to fend for themselves. But in order to get economy going, you need to have a legal system and a law obiding society.

In most African countries where you have violent thugs running berserk, corrupt governments, inefficient legal system and law enforcement, you can't start a business and no sensible foreign company will invest there either. And that's precisely why there is poverty in Africa.

Thanks. I am actually known by my friends for my patience. :-)
I can see a good potential in every human being. I think David also
has a fairly good potential - but he does lack insight, information
and experience. If he is, say, 18 years old, then all this would be
understandable. If he is 30, then you are right, he would be a truly
hopeless case.

Yes, the Sangean hype all started with the ATS803a. I played with one extensively at EEB and came away with the feeling that it was cheaply made, especially in comparison to the more expensive (and better performing) Sony 2010 which I ended up buying.

Ya get whatcha pay for.

The Muslims are not pissed because of "crazy white people". They are pissed with any of their neighbours regardless of colour, Indonesia, Phillippines, Thailand, Sudan, etc. And Sunnis are pissed with Shiites. Islam's borders are bloody everywhere. Muslims are pissed precisely because their religion is making them so. But of course, you like to blame the "crazy white man" for everything don't you. Makes you feel oh so-o-o good!

>Who gives the English the right to steal the Arab's oil?

What are you talking about? Are the English stealing the Arab's oil? Where exactly? What a load of rubbish. As far as I know, the world (including the English) are *buying* oil from the Arabs. For high prices. And the Arabs, instead of them using their fortune wisely, are mostly wasting it.

And don't you realize that without these "crazy white men", the Arabs would not even know that oil exists and what to do with it?

>But I was especially angry that Geoge Bush appointed another Howdy
>Doodie looking cracker for the Supreme Nazi Court.

Frankly, I don't think you truly understand what "Nazi" means. I wish you had to spend just one day under a real Nazi regime, to start fully appreciating the society you have the priviledge living in. (Which many other people would kill for, and which you don't deserve.)

In a Nazi society, you would go to a concentration camp for just speaking against it. You really have no idea what you are talking about.

> http://www.esr.org/outreach/climate_change/mans_impact/co2_temp.jpg

Global warming cyclical, says climate expert
By Philip Hopkins
June 13, 2005

Carbon dioxide is not a harmful gas and has helped produce the "green" world agricultural revolution, according to an Australian climate expert.

Rob Carter, from James Cook University in Townsville, said the rising level of carbon dioxide in the atmosphere in recent decades had boosted agricultural crop yields.

"Carbon dioxide is the best aerial fertiliser we know about," he told the Victorian Farmers Federation in Morwell late last week.

Professor Carter, a marine geologist, is research professor in the university's Marine Geophysical Laboratory.

He said the Kyoto Protocol would cost billions, even trillions, of dollars and would have a devastating effect on the economies of countries that signed it. "It will deliver no significant cooling - less than 0.02 degrees Celsius by 2050," he said.

"The United Nations Intergovernmental Panel on Climate Change has been the main scaremonger for the global warming lobby . . . Fatally, the IPCC is a political, not a scientific body."

To understand climate change, it was necessary to look at the longer record, he said.

Through an examination of material taken from deep below the ocean floor, marine geologists could study layers of earth's history similar to the way a tree's age could be determined by tree rings.

"We are in a relatively warm period today," he said. "But 20,000 years ago, it was as cold as it has ever been - that was the peak of the last glaciation."

Professor Carter said that over 2.5 million years there had been 50 glacial and interglacial periods. Of the past 400,000 years, the earth had been colder for 90 per cent of the time, with briefer warmer periods of about 10,000 years.

He said the earth was now at the end of a warmer period, and reputable climate-change scientists agreed that the climate was going to get colder. The debate was whether it would take tens, hundreds or even thousands of years to occur.

On a shorter time scale, Professor Carter said the earth had broadly got warmer in the modern period, from 1860 to 2000, although it had also been warmer in Roman and medieval times. There had also been a Little Ice Age between 1550 and the 19th century, when the Thames used to freeze over.

A cooling trend took place between 1940 and 1970, when temperatures began to rise again, reaching a peak in 1998. "This coincided with the biggest El Nino in the 20th century," he said.

However, research by the climate research unit at East Anglia University in Britain had shown that the average global temperature had declined since 1998.

Professor Carter said greenhouse gases such as carbon dioxide were not causing the earth to warm up. On both annual and geological (up to 100,000-year) time scales, changes in temperature preceded changes in carbon dioxide, he said. This was true even in the famous 1960-1991 graph showing rising amounts of carbon dioxide.

Professor Carter said that without the natural greenhouse effect, the average earth temperature would be minus 18 degrees Celsius, compared with the average of plus 15 Celsius that had nurtured the development of life and civilisation.

Water vapour made up about 95 per cent of the greenhouse effect.

Carbon dioxide was a minor greenhouse gas, responsible for 3.6 per cent of the total greenhouse effect, he said. Of this, only 0.12 per cent, or 0.036 degrees Celsius, could be attributed to human activity.

Climate had always changed and "always will", he said. "The only sensible thing to do about climate change is to prepare for it."

I'm waiting for a few more production runs before I get one. It's an attractive radio, but I'm planning to wait so that Degen can work through any QC issues it might be having with this unit. Even the 1103, which is a great radio, underwent a QC related revision soon after it was released to market.

It is the "crazy white men" (I am not racist,there are a lot of other people of color whom are very smart too) who maintain and keep those oil wells going.The ragheads (not confusing India with ragheads,they are smart too) can't keep those oil wells going by themselves.I noticed oil is about $60.00 per barrel nowdays.If we are stealing their oil,why is it I paid $31.00 and pocket change yesterday afternoon to fill my car's tank up with gasoline to the tune of $2.07.9 at the MurphyUSA gas station? Gasoline should be dirt cheap if we are stealing their oil.I am heading on over to the Goodwill store now to see what kind of junk I don't need,(and flirt with the women over there too) might as well burn a little of that oil I bought yesterday.That married Irish woman wayyyy over yonder across the big pond tells me,Larry,you don't need any more junk!

It is obvious, the middle east countries have the largest WMD which has ever existed, it is also a "natural" one--oil.

They can simply bring us to our knees by refusing to sell it to us, or demanding a thousand dollars a barrel.

It is self-evident!

I guess they're still worth $5k or so, at least. Their main weaknesses
are the CRTs (the later IC-R9000L used an LCD) and some synthesizer
fault related to bad solder joints; they also tend to run fairly hot.
That's all IIRC and from what I read on the net.

Glad to see you remember your 7th grade geography lessons. However, if you will go back and reread what I actually wrote you will find that I was not making a reference to what the book said. Merely that it was written in the same time that GB and RU were engaged in a wide number of imperialist activities. One of which was the Great Game.

Don't know what you mean by rugged. But if you mean surviving a drop I
cpuldn't tell you about that...I don't drop my radios as a test. I do
know the controls on the 2010 were far more precise and solid feeling
and the case didn't tend to twist and give a bit like the ATS 803a.
And my 2010 was going strong for the 12 years leading up to its sale.

>Take plastic knob off the tuner, stand in a puddle, change channels.

The old brown bakelite case with Octal tubes, (RCA, I think), we had in the kitchen was even better than that. It had a metal set screw on the volume control. Ouch.

For the OP, there was a low cost design called the "All American 5" that was the guts to most of the tabletop AM Broadcast band radios (in North America) from after WW-II through the mid 1960s. It was low cost because it didn't use a power transformer and the power line was connected to the chassis. If you had the power plug in the wrong way, line voltage was present on any metal parts that the user could accidentally contact.

This is where all the movie scenes came from that show people electrocuted in the bathtub. It really happened, too. Most radio nuts knew at least a friend of a friend who got killed. (In my case, a friend of my high school electronics shop teacher).

Some shortwaves used this design, too. National SW-54, Knight Star Roamer(?) , Hallicrafters S-38, and the cheapest Heathkit.

And the audio output tube (50C5 or 50L6) was always good for a couple of burned fingers if you didn't let it cool down before you tried to take it out of the socket.

A good place to start is to find an affordable copy of the _RCA Receiving Tube Handbook_.

No problem. I can beta test for 60 days before I decide to keep it. But, I think this radio is going to be good. It will probably be used more as a desktop radio then a portable. If you check out the features, you'll see it has a lot going for it if they all work well.

Sure...a piece of wire will do wonders. Does the 400 have an antenna
jack on the side? If so just connect buy it's male counterpart at
Radio Shack, hook it up and you are set.

Radio Shack also sells an antenna-on-a-reel with a connector that snaps
on to the antenna mast.

My hometown newspaper,the Clarion Ledger has been known to lie a bunch of times.It is a gannet rag which is controlled or partly controlled by Rupert Murdoch.The rag is very well known in these parts as the Clarion Liar.Just ask JT and Dave and Paul Gallo on their radio talk shows at www.supertalkms.com if y'all don't believe me.Oh Yes,I have caught that gannet rag in a bunch of lies before.We used to have a very good local Jackson newspaper by the name of the Jackson Daily News,but back in the 1960's or 1970's,they merged with the Clarion Liar (Oooops,Clarion Ledger) and no more Jackson Daily News newspaper.

I bought the gasoine for my car at the MurphyUSA gas station at the other side of the parking lot at the Wal Mart Supercenter store at the intersection of Highway 18 and Greenway Drive here in Jackson,Mississippi.(West side of Jackson) The location is one and six tenths miles South (South is always best) of my couch.I just now checked www.jacksongasprices.com and it is still the same price right now.For whatever reason (and I don't know why) the price of gasoline around here usually is a little cheaper that in other parts of U.S.A.

Expressing a view and suggesting shooting another person are different
things. This has nothing to do with viewpoints and everything to do with
advocating violence.

The reel antenna is simply coated wire wound on a spool - there's noting special about it and any wire will work as an antenna.

If your radio has a plug on the side for 'external antenna' then hook up a piece of wire (the longer the better) to an appropriate sized plug and you're all set...

If your radio doesn't have an external connector jack, just hook up the wire to a small alligator clip and clip it onto the whip antenna of the radio...

Pick up a book at the local library - antennas are easy (and fun) to play around with - save your money...

VIEWING THE DIEBOLD VOTE-TALLYING SCREEN PROHIBITED

Jim March, a member of the Black Box Voting board of directors, was arrested Tuesday evening for trying to observe the Diebold central tabulator (vote tallying machine) as the votes were being counted in San Diego's mayoral election (July 26).
(- online discussion: http:/www.blackboxvoting.org -)

According to Jim Hamilton, an elections integrity advocate from San Diego, he and March visited the office of the registrar of elections earlier in the day. During this visit, March made two requests, which were refused by Mikel Haas, the San Diego Registrar of elections.

1) March asked that the central tabulator, the computer that tallies up the votes from all the precincts, be positioned so that citizens could observe it. According to Hamilton, this would have required simply moving a table a few feet.

2) March also asked for a copy of the ".gbf" files -- the vote tally files collected during the course of tabulation ï¿½ to be provided for examination after the election.

During the tallying of the election, the Diebold computer was positioned too far away for citizens to read the screen. Citizens could not watch error messages, or even perceive significant anomalies or malfunctions.

Unable to see the screen, March went into the office where the tabulator was housed. Two deputies followed him and escorted him out.

According to Hamilton: "He was not belligerent, not at all. After he went inside the tabulator room he came [was escorted] out and he said clearly 'Iï¿½m not resisting.' They handcuffed him, took him out of the building. They put him in a squad car. Theyï¿½re going to take him to the police station, book him and take him to jail," said Hamilton. "Heï¿½s getting charged with a felony, 'interfering with an election official.'"

March's actions are the culmination of two years of increasing frustration with the refusal of election officials to respond to security deficiencies in the voting machines. The software that tallies the votes in San Diego is made by Diebold Election Systems, a company that has already paid the state of California $2.8 million for making false claims, due to a lawsuit filed by March and Black Box Voting founder Bev Harris.

On July 4, a report was released by European computer security expert Harri Hursti, revealing that the Diebold voting system contains profound architectural flaws. "It is open for business," says Hursti, who demonstrated the flaws on Leon County, Florida Diebold machines. He penetrated the voting system in less than five minutes, manipulating vote reports in a way that was undetectable.

Despite the critical security alert issued by Hursti, San Diego County sent 713 voting machines home with poll workers, increasing the risk that the "memory cards" housed in the machines could be hacked, and removing the argument that "inside access" was carefully safeguarded.

The arrest of Jim March underlines a fundamental problem facing Americans today as, increasingly, they lose the ability to monitor, verify, or watch any part of the counting process.

The San Diego registrar of elections knew of the security flaws in the voting system. Diebold has never denied the vulnerability identified in Hursti's report, found at http://www.blackboxvoting.org/BBVreport.pdf.

Despite knowledge of the increased risks, Haas made the decision to create additional vulnerability by sending the machines home with hundreds of poll workers.

While San Diego officials will no doubt point to a small seal on the compartment housing the memory card (the component exploited in Hurstiï¿½s study), Black Box Voting has interviewed a former San Diego poll worker, who reported that all that is necessary to dislodge and then reaffix the seal is a small pair of pliers.

IN A NUTSHELL:

- The machines have been demonstrated to be vulnerable to undetected tampering
- The San Diego registrar of voters chose not to take appropriate precautions
- The main tally machine was placed in a location that was impossible for citizens to observe
- Many voting integrity advocates have come to believe that voting machine reform now rivals the urgency of the Civil Rights movement in the 1960s.

Jim March acted on those beliefs.

* * * * *

If you share the feelings that Jim March has expressed about voting system secrecy, please forward this message to your lists and to online blogs as appropriate. Permission granted to reprint, with link to http://www.blackboxvoting.org.

Well,I happen to own a blow up doll.(it's a blonde) My old buddy gave it to me a few years ago for Christmas.I took it out of the box and looked at it and I put it right straight back in the box and there she sits on a shelf in one of my closets.PS,I never blew that blow up doll up either.

If the gas is not going to be used to create petroleum products, Mr.
Braudaway said, it would normally be reinjected to keep the pressure
up as oil is extracted, insuring a longer life for the wells. But Iraq
does not do that either. Instead, in the south, which has 80 percent
of the country's oil reserves, it uses an antiquated system of water
injection to keep the pressure up. (The problems are even worse in the
north, where for reasons known only to themselves, Iraqi engineers
pumped things like excess fuel oil, refinery residues and old crude
oil into some wells, probably damaging them permanently.)

At one "cluster pump" station with a new computerized control system
that the American money had purchased, the water appeared to be
flowing normally when a group of visitors arrived, although one major
pump had broken down minutes before. At another pumping station, which
moves crude through one of two critically important pipelines for
export from platforms in the Persian Gulf, the equipment was
oil-encrusted and generally could have used a coat of paint, but it
seemed to be functioning.

The problems with the liquefied gas plant, though, immediately caught
the attention of the Kellogg engineers as they drove up in a convoy of
sport utility vehicles. "It is very dangerous," Mr. Humphries said of
the gas streaming from the broken towers. "You're just pushing it off
into the atmosphere." Mr. Ibraheem, the production manager, said the
British military, which has responsibility for the south of Iraq, had
been warned not to fly in the area. And as he began to lead a tour
through the plant, he asked a photographer not to use his flash.

"Camera makes sparks," Mr. Ibraheem said. The tour passed without incident, but as the visitors were leaving, they encountered five big metal cylinders lying on the ground next to a road. It turned out they were new tips for the towers that the plant had been storing since before the war.

But the new plant managers had not been able to find the huge cranes that would be needed to put the tips in place. Now the engineers are hoping to install them by May. Standing next to the replacements was Hassan Monsour Fadher, a retired safety manager at the plant. When asked how the tips would work, Mr. Fadher demurred and said, chuckling: "You are giving me exam." Then he lighted a cigarette and took a couple of long drags.

The ATS-803A is built like a tank.

http://www.eham.net/reviews/detail/2814

''Conclusion
The Sangean ATS-803A provides a lot of value. It is no wonder they
were so popular. It is a well rounded versatile portable radio. 803A's
(or their Radio Shack cousins, DX-440's) are frequently sold used in
the $60-$100 range. The days of manufacturing portables at this kind

of quality level have passed us by. The 803A is a good all-around player for any MW/SW listener, especially if you can string up even a moderate length external antenna. If you can find one in good condition in the $60-$80 range, you are staring a bargain in the face.

Note on Modifications
This radio has proven to be a modifier's delight. Components inside are relatively easy to get to and there is ample room inside to move things around, add stuff, etc. Among the mods chronicled on the internet: "Anti-chuff," fine tuning and improved whip sensitivity. The fine tune mod is especially valuable for MW work. The fine tune mod provides +/- 3 kHz from the BFO control, when operating in the BFO Off position.''

Get a set of light duty test leads and an 1/8 inch plug (solder type,
plastic shell-probably in the big steel drawer.) You can daisy chain
the clipleads until you can reach a curtain rod or something. Or just
clip them all together.

BLG,
.
The Simplist of Simplist (InDoor) Antenna's
for 'portable' AM/FM Shortwave Radios
(No Ground Required)
.
Take a 1/8" Mono-Plug with Speaker Wires attached (RadioShack).
.
Plug the 1/8" Mono-Plug into the the Radio's 1/8" External Antenna
Jack.
.
Leave about 3 Feet of Speaker Wire (slack) from the Radio to the Wall.
.
Use a Thumb Tack to secure the Speaker Wire to the Wall.
.
Route the Speaker Wire up the Wall to the Ceiling and Tie a Knot
in the Speaker Wire at the Ceiling. Use a Thumb Tack to secure
the Speaker Wire to the Wall at the Ceiling.
.
Split the Speaker Wire after the Knot and route one wire to the Left
along the edge of the Ceiling and Wall. Route the other wire to the
Right along the edge of the Ceiling and Wall. Secure the Ends of
these two Wires with Thumb Tacks.
.
What you now have is a simple 'random length wire' Dipole Antenna
to use with your radio for AM/FM and Shortwave Listening.
.

Yes, and I can drag out the innumerable glowing reviews of the 2010
over it's very long run as a popular high quality portable. The 803
was a decent radio and a good deal for the money, but that's about it.
The cheap feel left something to be desired and better performance
could definitely be gotten with the 2010.

Are you sure about the size difference? According to Universal Radio, they
are the same size. The S350DL looks "Squished".

The ATS-606A is a great walkaround shortwave. I take mine on morning
hikes. Picks up India just fine at 8 in the morning with just the
built-in whip. The 1 kHz fine tuning is very helpful.

I find that Salvation Army doesn't have much electronics, at least in my area. If you have a Deseret Industries thrift store in your area (run by the Mormons) they usually have lots of electronics. Local chains can sometimes have electronics, too. I know that there's a local chain here in California called Thrift Town that carries good stuff. But most of these places don't have much in the way of tube gear anymore-there's too much demand for it, and most of it goes to Ebay. The thrifts will sometimes have cheap 50s tube radios, but those were of lower quality than the pre-50 tube radios. You could try local antique stores, too. They are usually pricey, but you might be able to find a good deal. Also try Antique Radio Classified if they are still around. I remember them as a monthly magazine full of ads for quality tube gear. You said in another post that you are skilled in electronics, which is good because prices for nonworking gear are much lower than for working gear. Often only a couple capacitors or tubes need to be replaced.

Weird. Both my 909 and 398 work pretty good on the whip. A long wire picks up performance, as is to be expected. I bought these instead of the 7600 because of the actual tuning knobs. That and the sync detect on the Sony completely failed to impress me.

The Administration went to great lengths to explain that regime change was NOT the reason for invasion. That would have been illegal under UN rules. Weapons of Mass Destruction were the justification.

These weapons were located East, West, North, South and a little North West of Baghdad. Remember? It was a 'Slam Dunk'..

Over five years ago,I could pick up Radio One in Dublin,Ireland (and some other radio stations over there too,one of them was Galway) and also a taped replay of a news,weather,and sports tv station via windows media with my webtv.They upgraded though (not webtv) and I can't pick them up anymore with my webtv.Yep,I used to watch a taped replay every day on my tv set of that tv station in Dublin.It was sort of like a stop action mode,the video was.There tv news on tv over there is about the same as it is over here,except the accent is different.

I guess he would also say, Christian barbarians are waging a holy war against none combatants in Iraq and Afganistan, yeah..I know they are collateral damage, just happen to be in the wrong place at the wrong time. Muslim like Christian is a descriptive word used to describe a paticular religious believer and unless you are willing to stupidly claim the United States is conducting a religious war pitting Christians againist muslims in Iraq, muslim should not be used to describe a terrorist. I know it would pizz me if it was said that Christian Soldiers were killing Iraqi's...but then crap'ola happens in the fog of greedy mens minds.....peaceV

Unfortunately for you, you have very little knowledge of factual history in respect to the Vietnam conflict.
It was people like you making ignorant comments such as yours that is responsible for those millions who perished after the U.S. withdrew in the resulting Communist death camps of Laos, Cambodia and Vietnam and continues to this day in Burma, N.Korea, and the Big Red Star - China. Our soldiers, the allied Vietnamese soldiers, the Hmong, and our own soldiers, all died in vein. All because of YOU! Your a fine Patriot.

Tick, Tick, Boom
In the wake of 7/7 the Brits are livid over their governmentï¿½s intelligence failures. Just wait until they hear about ours.

by John Aravosis

Three new studies by the Saudi government and think tanks in Israel and Britain conclude what everyone already knows: The war in Iraq has incited more, not less, terrorism. The British study, funded by the government, found that ï¿½the situation over Iraq gave a boost to the Al-Qaeda networkï¿½s propaganda, recruitment and fundraising, caused a major split in the coalition, provided an ideal targeting and training area for Al-Qaeda-linked terrorists, and deflected resources and assistance that could have been deployed to assist the Karzai government and to bring bin Laden to justice.ï¿½

Other than that Mrs. Lincoln, howï¿½d you like the war?

While the American public is paying the bad news the usual inattention it gives any scandal not involving a missing blonde chick, the Brits have gotten the message and theyï¿½re not happy. A recent Guardian/ICM poll shows that two-thirds of Britons see a link between the recent London bombings and Britainï¿½s decision to join the war in Iraq. My conversations with locals on a recent visit to London, hours after the July 7 bombings, confirmed as much. In addition to the surprising number of people I spoke to who blamed the attacks on Britainï¿½s involvement in Iraq, the sole cop standing guard in front of Buckingham Palace that evening, when asked why the attacks happened, told me that it was ï¿½because some people want to be free.ï¿½ Imagine a Secret Service agent saying that in front of the White House on 9/11.

The British publicï¿½s ire over the bombings only increased after it was discovered that police had one of the suspects in custody months ago, but released him after determining he posed no threat. No doubt the Brits will be even more pissed once they realize the Bush administration twice botched efforts that could have helped prevent the attack.

The first screw up was back in 2002. According to the Seattle Times, the US had in its custody at that time Haroon Aswat, a man federal prosecutors believe helped set up a terrorist training camp in Bly, Oregon in late 1999. For reasons no one can quite figure out, John Ashcroftï¿½s Justice Department blocked efforts by its own Seattle-based prosecutors to seek a grand-jury indictment of Aswat. Why is that relevant? Aswat has now been tied to the London bombings (the Brits think he was in cell phone contact with at least two of the bombers in

the days preceding the attack).

The second screw up is even more astounding.

Last summer, just after the Democratic convention, then-Secretary of Homeland Security Tom Ridge issued another of his many Code Orange terror alerts. The secretary-who-cried-terrorist was facing increasing criticism for politicizing the terror warnings in the months before the presidential election, so this time he did something different. Secretary Ridge gave the public details, and lots of ï¿½em.

ï¿½Reports indicate that Al Qaeda is targeting several specific buildings,ï¿½ Ridge said at an August 1, 2004 press conference, ï¿½including the International Monetary Fund and World Bank in the District of Columbia; Prudential Financial in Northern New Jersey; and Citigroup buildings and the New York Stock Exchange in New York.ï¿½

Those details were enough for the New York Times, in less than twenty-four hours, to uncover and break the rest of the story. The Times reported on August 2 that US officials had announced the terror alert after receiving hard evidence that Al Qaeda was targeting New York and DC financial centers. The evidence came from the laptop computer of Muhammad Naeem Noor Khan, the Times said, an Al Qaeda operative arrested in Pakistan several weeks prior who was now working as a US mole inside Al Qaeda. Thatï¿½s when all hell broke loose.

While it remains unclear who spilled Khanï¿½s nameï¿½the Americans blame the Pakistanis, and vice versaï¿½the Times story created a panic in English and Pakistani law enforcement circles. Khanï¿½s Al Qaeda buddies in both countries, upon learning that their friend was a double agent, quickly went into hiding. Both British and Pakistani officials were ï¿½furiousï¿½ with the Americans for helping to unmask their spy, according to the New York Daily News, and the Brits had to launch a series of high-speed chases to catch Khanï¿½s fleeing cabal. A senior Pakistani official told the Associated Press ï¿½this intelligence leak jeopardized our plan and some Al Qaeda suspects ran away.ï¿½

Now back to 7/7.

There was an important piece of information not revealed last August by either Tom Ridge or the Times. As ABC News reported after the London bombing, Khanï¿½s laptop not only contained information about US financial centers, but also evidence that Al Qaeda was planning to target the London Tube. ABC, of course, forgot the clincher: How Bushï¿½s leaky goon squad sabotaged a multinational operation to thwart what would ultimately become the successful London bombings of July 7, 2005.

Beats a missing blonde chick any day.

[snip]

A typical ferrite bar antenna is tuned. The radio uses the ferrite bar antenna as part of the tuned circuit for front end selectivity in the AM band. Damage to the connections to the antenna will not only reduce signal transfer but also reduce selectivity.

I can't tell you exactly where your radio's problem is. But I've fixed this problem on different radios, and it was broken connections at the ferrite bar antenna.

Actually, regime change was one of the big reasons
touted in the US in the last couple of months leading
up to the invasion. It was in the background for a
while, but it came to the forefront when people wanted
another explanation other than WMD.

Huh! I remeber Cheney and Dominatrix Condi Rice and their ''smoking
gun in the shape of a throbbing mushroom cloud''. I remember poor
Colin Powell waving a bottle of Anthrax at the U.N.

Herr Wolfowitz says they used WMD as a reason because ''regime
change'' wouldn't fly with the peeps.

The Valerie Wilson deal, the Downing Street Minutes, Bolton, etc. are
all the same story. Bush lied us into war.

I remember the "what will it take to get us to call off the
invasion?" question posed to members of the
Administration, and the response was "regime change".

Saddam was willing to go to a neutral country. He was not allowed to
leave.

They want Iraq for bases to attack Iran. They have a warped plan to
eventually attack the Chinese and take over the world. They think
they have God on their side and that they can lie all they want. They
are dangerously insane.

That's irrelevant. The internet also includes international broadcasters, so do you want a bunch of posts about the intricacies of XML coding?

Don't any of you satellite people have the balls to form your own newsgroup?

<< They think they have God on their side and that they can lie all
they want >>.

Brings to mind something Mr. Zimmerman wrote, circa 1962:

Oh my name it is nothin
My age it means less
The country I come from
Is called the midwest
Its taught and brought up there
The laws to abide
And that land that I live in
Has God on its side.

Oh the history books tell it
They tell it so well
The cavalries charged
The indians fell
The cavalries charged
The indians died
Oh the country was young
With God on its side.

Oh the spanish-american
War had its day
And the civil war too
Was soon laid away
And the names of the heroes
Is made to memorize
With guns in their hands
And God on their side.

Oh the first world war, boys
It closed out its fate
The reason for fighting
I never got straight
But I learned to accept it
Accept it with pride
For you dont count the dead
When God's on your side.

When the second world war
Came to an end
We forgave the germans
And we were friends
Though they murdered six million

In the ovens they fried
The germans now too
Have God on their side.

I've learned to hate russians
All through my whole life
If another war starts
Its them we must fight
To hate them and fear them
To run and to hide
And accept it all bravely
With God on my side.

But now we got weapons
Of the chemical dust
If fire them were forced to
Then fire them we must
One push of the button
And a shot the world wide
And you never ask questions
When God's on your side.

In a many dark hour
I've been thinkin about this
That Jesus Christ
Was betrayed by a kiss
But I cant think for you
You'll have to decide
Whether Judas Iscariot
Had God on his side.

So now as I'm leavin
I'm weary as hell
The confusion I'm feelin
Ain't no tongue can tell
The words fill my head
And fall to the floor
If God's on our side
He'll stop the next war.

Maybe it's time we opened up an RFC for rec.radio.satellite.
After all, CB is in the HF and shortwave bands, but they
have their own newsgroup.

Steve

I completely agree $500 may be over priced, but I don't know that yet. Plus, I hear it's just too big to be a real portable in the sense of being easily carried around. I bought it more for home use then outside. I really don't want to lug a $500 radio around outdoors. I will take it out, but I'll most likely use it at home with a good antenna.

This radio has been in production so long, I'm sure they got it right. What I think may happen, or may have happened already is the radio has a DRM jack. The guy that bought it is a novice and said he couldn't really comment on the radio's
SW abilities.

Now that would bring the receiver up to date and be very useful. I hope there is a DRM jack. I haven't read a review on it yet. Or, maybe the next production will have DRM.

Lucky

No, it's rec.radio.SHORTWAVE. It's not rec.radio.fm. It's not rec.radio.cb. It's not rec.radio.vhf and it's not rec.radio.satellite.

It's rec.radio.SHORTWAVE.

Steve,

if you read the specs on Eton's website, it has Double sideband sync like
only the HF-150 had.

"Single Sideband Synchronous AM Detector: selectable USB/LSB or double
sideband to minimize adjacent frequency interference and fading distortion
of AM signals."

Well, for your sake I hope it's a winner. I agree that it's too large to carry around very often. I also wonder if the build quality would tolerate such wear and tear. It's a relatively large receiver and its case appears to be plastic. While plastic is usually just fine, when its used to construct larger radios it can bend, creak and produce a 'cheap' feel and appearance...this was one minor gripe I had about the Sat 800--though fortunately the E1 will be nowhere near the size of the 800.

I guess they can't all be built like the HF-150....sigh.

An All American five is so so for reception.
We had a table model Sears Silvertone - circa 1961 -- it featured a tunable RF amplifier and wow did it pull in the stations across country at night in the winter.

So maybe look for a vacuum tube set with an RF amp

BTW many vacuum tube Auto radios had RF amps and they really worked well.

Yes, satellite radio is off topic for a shortwave group, but then let's keep this in perspective: some of the threads which seem to attract the most response in this group are off topic. I mean, what the heck does Winston Churchill's opinion of Muslims have to do with shortwave? It's certainly further off topic than is satellite radio. And how about the recent thread on British police? Geez, it's the boundlessly idiotic threads like these which seem to attract more response than manure attracts flies. With all the mindless and usually ill-informed political ranting on this group, a question about satellite radio doesn't seem too great a transgression. Sure, there's an alt.radio.satellite group for the satellite radio enthusiasts, just as there's probably a multitude of alt.politics.idiots groups for the more pervasive type of off-topic postings to be found in rec.radio.shortwave.

Yes Steve I agree, but how do we open up a rec.radio.satellite newsgroup?
Lets go for it but I haven't a clue how to do it... but PLEAS can someone do
it or tell us how to.

Many thanks

Mike

Yes, you're right; we won't be able to keep the off topic
posts in general from appearing without becoming a
moderated group. However, the satellite radio issue is
something that can be worked out by creating a home
for it.

If enough people are interested, I'll start reading up
on news.groups about what I need to do to get a
formal RFD together for the creation.

Why do Americans only disparage the French when all other European countries
also disagree with the Iraq attack and the Brits with their PM Tony Blair?

Sheesh... not only a 'tard boy, but a dense 'tard boy at that.

Here's a clue, 'tard boy... it doesn't neessarily have anything to do at all
with Iraq.

I know, I know... 'tards like to attach the motivation to do anything with Iraq.

Even new radios,if plugged into a wall outlet and thrown into a bathtub
of water,if somebody is in that bathtub,it can kill them.Those
capacitors (for instance,working on things that have capacitors in them)
can zap you too if you are not carefull.Capacitors are suppose to be
properly drained of electricity first to avoid a shock.

Too bad the USA rejected the constitution written in 1945 modelled on the USA's constitution and handed Viet Nam back to the French. This pushed VN into the communist orbit. We may feel sorry for the soldiers and civilians killed in the southeast Asian wars, while all the leaders should be held accountable from all sides.

Subsequent events would suggest the communist threat was illusory, that short term planning and alliances have lead to subsequent dangerous circumstances, and it is all really about money and power, and not at all about principles such as freedom.

Remember Hal Turner, who used to say something to the effect of " I
have a show broadcast on shortwave, so anything I talk about is on
topic".
That's almost as bad as people believing they are "real" shortwave
listeners just because they don't listen to a portable.
What a hobby.

I strongly disagree. I spent many a pre-teen evening DXing like crazy
with one of those hideous little boxes. One time I logged WBZ Boston
(I was in Scottsdale) right after Sunset. I could get just about
every L.A. station.

I was watching this British car show last night called Top Gear. On the show one of the hosts mentioned that "petrol" was between $8 and $9 U.S. a gallon in England...

of performance and pulling in long distance radio
stations,shortwave,am,and fm,what improvements have come to radios since
the 1950's? Including shorwave,am,and fm performance,mostly applying to
table top radios in size without useing an external antenna.Is there an
all around number one radio? Pricewise,I don't know,probally up to about
$300.00.

Yes, go for it!

6495. What are the frequency limits for RRS? (from the original FAQ)

Newsgroup: rec.radio.shortwave
Date: 2005-07-28 19:32:55 UTC
From: David <rickets@knac.com>
Message-ID: <3jcie154nj3v9bvq9a84fnfdmjh6eq9sfj@4ax.com>
Source record: 30134

o What is rec.radio.shortwave for?

As stated above this group was created for USENETers to have a place to discuss
the radio monitoring hobby. This group is not moderated, however 'serious'
arguments and any kind of flame wars are strongly discouraged. That is not to
say that genuine disagreement and discussion of differing opinions is not
welcome. We only ask that you keep the tone friendly, and in the spirit of
international cooperation upon which the hobby is founded.

This group is intended to be a place where ANY radio monitoring topic can and
should be discussed. We are happy to hear from posters who listen to any part
of the radio or microwave spectrum, from DC to daylight. We discuss topics of
almost any kind, ranging from (but not limited to) shortwave broadcasting,
DXing small or distant shortwave stations, utility and teletype monitoring,
military eavesdropping, station schedules, QSLing sw broadcasters, spectrum
usage, equipment design and modifications, antennas, receiver reviews and
recommendations, and many more.

Despite what the newsgroup name might imply, we definitely DO NOT limit
discussions to shortwave only. Any radio-related topics are welcome.
People interested in scanning VHF frequencies may find that the
rec.radio.scanner newsgroup more accurately reflects their interests, and
people interested in pirate radio may want to check the alt.radio.pirate
newsgroup, although this group seems to be more interested in building small
FM transmitters than in hearing distant shortwave pirates.

Don't you know they can track you with those satellites? If they want to track me,let them.To the Goodwill store on Oak Circle mostly every aftenoon,to the wal mart store at the intersection of Highway 18 and Greenway Drive about once a week for beer and grub,(going there tomorrow) to my old buddy and his wife's home on a certain Circle (yes,part of the name of the street they live on is Circle) that runs off of Harper Street in Richland,Mississippi,once in a while.It's like a set routine I have,the same o same o all the time.I went to Cowboy Maloney's Electric City electronics and appliances store on Ellis Ave this morning to buy a new 18,000 BTU window unit airconditioner ($388.00 plus Mississippi RIPP OFF state sales taxes) because my old thirty five year old window unit airconditioner finally bit the dust.(it got up to about 93 degrees in my house without my airconditioner,electric fans do come in handy) It is an extremly dull and boring routine I have and that is the way I like it too.

I just have a hard time paying for radio (signals, that is).
heck I don't even have cable or satellite tv.
Now if the sw part of the radio is amazing, I might consider it, but
for the price, there has to be better options.

My feelings exactly.
If I wanted to discuss sat radio, I'd find a sat radio group, either on usenet, or, perhaps MSN or Yahoo.
I have no interest in any form of radio that requires me to "subscribe". The beauty of sw is that one can receive it without having to ask permission first. And one can do this with a minimal of cost outlay. Counting a piece of wire, one can listen for under us$50.00 total. No monthly fees, except, perhaps, batteries, but, hey, there are ways around that too.
And one can hear stuff that may, depending on the country you're in, be considered "evil". That is part of the fun as well (I love Radio Habana).
And then, there's the coolness factor of finding something that is not so well known, and sharing it with others here in the group.
with sat radio, you get a program that tells you what is on, and who is talking, etc. No coolness there.
Will sw linger a long lonely time, just to die? Probably, but as long as there are people who believe you can enjoy this hobby with a minimum of cash outlay, it will survive.
Because, around the world, it's not the people who have the big rigs that have kept it breathing, it's the people who listen in with a community radio, or on a cheap portable that have kept it going. In that world, there is no room for snob factor, only a need for information. And as long as that world exists, so will sw.

About three years ago when I was listening to the Roger Fredinburg radio talk show www.regularguy.com a guy in either Texas or New Mexico phoned into Roger's show and he said he retired from working at an oil refinery.He explained how gasoline is a waste byproduct of the oil refineries.Of course the gasoline at the oil refineries is cleaned up and certain kinds of chemicals are added to the gasoline to make it burn cleaner and perform better and there is the infrastructure and cost of delivering the gasoliine (and diesel fuel too) to the gas stations.Los Angeles (and many other cities in U.S.A.) used to have a very good trolley car system many years ago untill the crooked Rockefella's had the trolley system torn down in favor of oil and automobiles.Yesterday or the day before,I read an article about the mayor of Los Angeles wants to wean the people of Los Angeles away from their vehicles and on to public transportation.The price of gasoline is very costly in many more ways than one.I once read somewhere that most of the people in Europe drive diesel engine powered vehicles.Jackson used to have a trolley car system too,I wish the old fashioned trolley cars would come back.Most of the trolley cars in U.S.A.were sold to South American countries where many of them are still being used today.Some of the old trolley cars in U.S.A.many years ago had a platform on the back of them and the trolley cars were pulled along by horse's.When they got to the top of a hill,they would let the horse ride on the platform on the down hill runs.

He wasn't advocating violence. He was advocating Justice!!!
Had you committed treason like Jane Fonda you would have spent
time in prison or have been shot by a firing squad. I advocate the latter.

Lawyers Henry Mark Holzer and Erika Holzer seeks to make the case that in
fact, Jane Fonda engaged in acts that make her guilty of the actual legal
grounds for treason, which as laid out in the Constitution, defines the act
as "levying War against them, or, in adhering to their Enemies, giving them
Aid and Comfort."

Their conclusion was simply that there was "enough evidence to submit to a
jury, that the jury could have convicted her, and that a conviction probably
would have been upheld on appeal."

Communist China-Russia War Games Set For August 18th
http://www.washingtontimes.com/upi/20050727-045419-8923r.htm

Communists rip Pentagon military report:

It took months for the Pentagon report on Communist China's military to see the light of day, but the cadres were able to accuse its authors of "scheming to use this as an excuse to sell advanced weapons to Taiwan" within hours.

http://www.washingtonpost.com/wp-dyn/content/article/2005/07/20/AR2005072002081.html

Among those not inclined to buy the Communists' line are the editors of the Washington Times and Newsmax's Charles R. Smith.

http://www.newsmax.com/archives/articles/2005/7/24/174404.shtml

CNN's Lou Dobbs has been exposing "Communist" China on his programs recently. Today he made note that Congress has recently started referring to China as "Communist China". - D'oh!

and "Communist" China seems to have noticed Lou Dobbs - R'uh R'oh!

China Launches "Propaganda" Offensive

China has launched a campaign to counter U.S. criticism of its growing economic and military power, employing a top American lobbying firm to convey Beijing's views to Congress.

The Chinese embassy has retained Patton Boggs to lobby on a wide range of issues before Congress, according to a lobby registration statement filed with the U.S. Department of Justice.

The hiring of Patton Boggs " which has also represented Saudi Arabia, Kuwait and Pakistan " "highlights China's efforts to respond to the rising wave of anti-Chinese sentiment in Congress," the Financial Times reports.

"Beyond trade, the ill feeling is also driven by Chinese threats toward Taiwan and China's rapid military expansion." China has significantly increased its presence in Washington over the past two years, with government ministries and provincial governments hiring lobbying firms " chiefly to work on trade issues.

"The Chinese are learning to walk the walk and talk the talk," said Robert Kapp, former president of the U.S.-China Business Council.

Addressing a meeting of the Council on Wednesday, Tan Jiaxuan, a senior Chinese government official, said Beijing would "gradually address American concerns over the trade deficit and intellectual property rights, and would allow the U.S. greater access to services, according to the Financial Times.

"All this will mean boundless opportunities for U.S. businesses, he said.

Tang also met with Secretary of State Condoleezza Rice. The discussion focused on trade issues, preparations for a summit meeting in September between President Bush and Chinese President Hu Jintao, and the crisis over North Korea's nuclear weapons program.

But even as Tang addressed the Council, U.S. legislators were passing a bill that would allow American companies to seek tariffs on unfairly subsidized Chinese imports. The bill had been temporarily blocked by Democrats.

I don't see why everyone keeps getting hung up on the XM feature...it's not like you need to subscribe to it for the radio to work! It does everything else that the Satellit 800 does, as far as I can tell. Not saying anyone should run out and buy one before any reviews come out, but can we drop the whole "I don't want to buy it because I don't want to pay for radio signals" thing?

You don't have to buy the satellite antenna it's an extra.

The radio has some nice features and it looks to me that they paid
attention to the audio sound quality it can produce so it may have great
sound.

It only has a whip antenna so the AMBCB reception may not be great
unless you hook up an appropriate antenna.

It could be a winner!

Source record: 30023

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5793754837

Classic early Fisher Tube Receiver AND Mono Tube Power Amp AND a tube phonostage, by The Fisher Radio Corporation of New York. This is a cool example of one of the earliest Fishers. It has had one owner and dates to the late 40s early 50s. This set up has been part of a custom console set up

Winner takes ALL.

Follow the link for photos and full details.

"THE FISHER" is a a receiver model K2 @ 245 WATTS, serial number 2054. It has bands for AM, FM and Short Wave SW, as well as phonograph selector. It has two very cool "eye"(6U5/6G5) tubes as part of the face as well as a television input in the rear, recorder output, am loop output and FM dipole connectors etc.

Includes original bakelite type knobs.(In the photo the oneknob missing from the console face on the far right is actually the seperate control knob for the Dynamic Expander available in a seprate auction this week.

It includes the following tubes:

SEVEN 6BA6
TWO 12AT7
TWO 6U5/6G5
ONE 6BE6
ONE 6AU6
ONE 6ALS
ONE 6C4

It is missing ONE TUBE a OA2

Receiver has been tested and powers up ok.

Now the Power Amp.

This power amp is the original custom amp that accompanies the receiver. It has no markings on it but it is CLEAN and powers up fine.

It includes the following tubes:

FOUR 7C5
TWO 5Y3
ONE 7A4

The rectifiers have the numbers that appear to me to read 1822b and 1828b.

115 volt 60 cycle ac line and a 5 amp fuse, SPEAKER output as well as two ac outlets to power the phonograph etc. It's power on/off is presently controlled by it's original connection to the Receiver, BUT could be modified to power up on it's own. Original connection cables are ALL included

The seperate Phonostage uses a 12AT7

ALSO INCLUDED is the original Schematic

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5793754837

Now THATS a joke! But not in the way you wish it was.

http://www.freerepublic.com/focus/f-news/1450398/posts

The French don't use quaint graphic "alert levels". They use one colour:
Red. The colour of the dripping corpse of anyone who even *thinks* about
terrorism.

"The first to confront its Islamic terrorist threat was France, home to
Europe's largest Muslim community, which faced a series of bomb attacks
in Paris in the 1980s and 1990s. Most of France's five million Muslims
are Arabs from its former colonies in North Africa, particularly
Algeria. The attacks on Paris were seen as revenge both for the past
colonisation of Algeria and for supporting the present military regime.

The French Government clamped down on radical Islam in a way that no
other country has. No mosque or Islamic prayer hall is off limits to
police. Imams preaching hate are regularly deported. France stopped
giving asylum to Islamic extremists wanted in their home country, and
was disgusted when many of them were given refuge in Britain. As a
result of France's draconian anti- terror laws, the country is thought
to be comparatively free of terrorist networks."

But considering the more recent jihadist tactic of targeting the US, if
you really, really so desperately desire France to be weak on terrorism,
well, perhaps they must just oblige you.

Cheers.

That's because in that case the whip is handling both AM and FM reception (never understood how that works), we don't know yet if the E1's whip will operate that way though.

If not, you could get a Jensen amplified AM/FM antenna. Not sure how much it costs or if it's still being made, I bought mine some time ago at Wal-Mart. It sorta' looks like a black rendering of Washington Monument with a small knob near the bottom to adjust the amp and a green LED letting you know that the amp is on. The AM lead-in on this thing connects via two lugs which can be lopped off with a wire stripper if necessary. The FM lead-in is a 75-ohm coax connector with a supplied matching transformer.

[One or more binary attachments are retained only in the source text.]

Hey there expert about everything but does nothing...I spent 26 years working my way up from E-1 to CDR...most time spent on the aircraft carriers, and I know those guys out there (Hi Bill Doremus and the crew!!!) You could not get past first base on the physical and flight school, could not stand the 8-10 G's incurred in flight, perform the duties after your normal flight schedule (Air Force pilots are just pilots with crew's rest even in combat; Navy pilots fly, fight, and then have divisional or departmental jobs of a leadership or administrative nature).

And considering its in China Lake, do you even comprehend what goes on out there ??? If they hit and crashed then it was a test event, and something failed...we get killed out there so pilots do not die out there on a cruise, or in combat...every pilot knows the risks.....everyone accepts the risks...what do you risk friend. And those Navy planes and ships fight and last 25 years or more...if your local mechanic/dealer, or airline maintained the way the Navy crews do, you'll still be driving that clunker today. Navy pilots do not bail out over civilian areas like Air Force pilots do (you steer it and fly it to some point over yonder, and do so even at the expense of your and crew's life, as needed).

If you are such an expert on the DoD's budget, and what these men and planes cost (which cost more, the plane or men ???? Do you even know ???), then why did elect such unethical Congressmen trying to add 450 billion to the DoD budget for weapons and programs the military officers do not need or want...or argue for a runway on a base scheduled to close down.

People like you make me sick ... let me stick your ass out on the front line, if you are even man or intelligent or patriotic enough to cut the

upper 10% of our male population......you are just another expert that whines about things you know absolutely nothing about, and probably have not done a single iota for your country or local community beyond paying taxes, or maybe voting in some past election.

Clean up your life and then achieve some level of manhood and proessionalism before pointing those curved fingers at a group of professionals who wouldn't even let you carry their flight bag, and whose maintenance gang would like to personally educate you as to what it takes and costs everyone in Naval Aviation for every day of their lives, ashore or afloat, to keep you safe at home Sunday Quarterbacking on the sidelines of life.

Look you little idiot...I have worked and live over here in the heart of Islam...just because you say you adopt Islam back there, and change your name to Ahemed, Moh'd and the like, it doesn't change what or who you are. Here right outside of Mekkah, a black man is still called a nigger...get it...I not only know but work with the locals here every day for the past 8 years...the poor have nothing, the middle class has whatever the upper class cannot take, and the leaders have everything...the religious leaders feed off of the leaders' charity to keep the masses in line.

In the Book of the Cow (you are a believer, no???), there is stated the three classes of men...how can you have individual freedom in a religion that defies God's love and law???

Nothing changes here, it only get worse in every way except what the west is trying to do...restore human worth and dignity to these peoples who have been told to submit to their leaders, and not to God alone.

I have a ton of there propaganda pamphlets produced by the Islamic International Press...read 'em lately....not I think. Everyone save the Arabic Muslims are slaves, cattle to be sold and used under a form of chatel or indentured slavery.

I will tell you about white crazy guys...let's pack you ass back to where evere you think you belong...you'll find they don't want you as a burden...they want workers not whiners...you would be beaten or killed....and before Islam spread, what was your religion...I suppose you had a choice...Islam is the fastest growing religion only because of a population boom...in reality and in Africa, Christianity is on the rise, and Islam on the decline...what to know why...get your butt over here and see for yourself...but then you'd have to be worth something to the natives or government here first to even come here.....

Time to drop the "white man" excuse...that is Islamic...blame someone else for your laziness or choices in life (if you can choose). I do not blame white or black...Islam is a curse on the free spirit of men.....only under the firm hand of Salladin did they prosper (keep the religion in the background)...in fact it is time to dispose of all organized religions...if you cannot believe in God without the showmanship and ritual, then you are an unbeliever...and if you have a direct link to God, then why be beaten 5 times a day to attend prayer.

There is no law or freedom here with or without Islam...and considering Islam has done absolutely nothing to better the lot of these peoples than participate in their ritual rape and pillaging, the British were at least civilized about it.

Facts remain the biggest deterrent to world peace, and the preservation of the rights and dignity of every man is Islam.....despite all that I see, hear, and do everyday here with REAL MOSLEMS, educated and successful Muslims who would shun your ignoranance, and have had read in the Quran, Hidaths and local documents, your comments alone show an ignorance of the real world over here, and the teachings and tenants of Islam in its purest and practiced form.

Sell your unqualified opinions to some other ignornant soul..spare me the BS...maybe I can get someone here to hire you as their driver, tea boy, or companion....you women and men live apart here in the same house...rarely see each other before the wedding night...wanna try that lifestyle????

If you don't like the white man or his culture or his drive to succeed or his achievements, then pack your butt back to where ever and live the life you will never find over here....amzing that they are crying "...freedom.." in every claudestine corner of the home of Islam, and you want to insult what they respect and long for.

Too bad that freedom of speech and religion are not allowed over here....Christianity would run so rampant here that ISlam would die off in 2 to 3 generations. Before you open your mouth, get your facts straight, or at least speak form personal experience from the Middle Eastern region. Your just another ignorant fool blaming everyone for your lot in life rather than being a real man and working your butt off to get ahead. If you want to help the Islamic brotherhood over here, then give up the terrorists, and fight for their rights under brutal dictators and kings ... don't criticize want you don't understand or know about sir.

My latest ILG (May 2005) shows this for R.Rebelde out of Havana

5025 khz 0000-2400 non-directional
6120 khz 0300-0400 non-directional
9600 khz 1000-1300 230 degrees
11655 khz 1500-1730 230 degrees
11655 khz 1000-1300 230 degrees

Anyone out there still using this 20 some year old radio and is it good
enough for serious SWLing. If so what are they going for in good shape?
The reason I ask is for a short time I used a borrowed about 20 years ago
and kind of liked it but my memory isn't that good.
tnx

Spare me.

Ignorant? yes.

Propogandistic? yes.

Treasonous? not even close.

LEARN WHAT WORDS MEAN before you use them!

Also, learn about U.S. history. It is EXTREMELY hard to charge someone with treason -- that vas VERY intentional by the founding fathers.

Finally, try this: Disennt is not treason. Dissent is not treason. Dissent is not treason. Tattoo it on the inside of your eyelids until any moment not thinking -- which for you should be nearly all the time -- is occupied by that phrase.

To the writer of that excrement:

Clearly you haven't heard of the firebombing of Tokyo, which was more destructive to lives than both atomic detonations together. You haven't heard of the bombing of Koln and Dresden.

For that matter, you haven't heard of the Rape of Nanking, Serbia, Rawanda and Somalia. You, sir and/or madam, need a fucking clue. Unless, of course, you LIKE your ignorance, and like waving it around in public...

Y'all are a collection of stupid, ideological fucks. Get lives, or stop wasting ours. Please.

I remember reading reviews and talking with guys on the old Fido BBS nets that either loved or hated the radio. No middle ground. As I remember it had some Icomisms that you had to get used to. One was having to re-tune when switching modes and of course it lacks direct keypad entry and memories. And dxing.com notes some undetailed problem tuning at the margins of the bands?? But in the right hands it was a good radio.

Here's a pretty good summary at: http://www.dxing.com/rx/pcr1000.htm altough the valuation seems high to me. More details if you speak German are at: http://www.dr-boesch.ch/radio/icom-r70.htm The google translation to english is a bit rough, but readable.

R-70, and it's later sibling, R-71, are getting a bit long in the tooth. That's not necessarily a bad thing. The technology still performs, and can still hold its own among some, but not all, of today's offerings.

R-70 is not exactly feature rich. It's basic performance. With more than a few bugs that were worked out for the release of R-71. I'd Recommend R-71 over R-70...R-70 being a good 'first draft.'

Being of it's age, components have begun to drift, caps have begun to deform. As a result, any R-70 you may encounter may be in need of attention to restore it to performance. Bellevue can help you with that. Figure at least a couple hundred bucks for this service. This is one time that factory service is the wiser choice. They know more about the radio than aftermarket service sources, and their expertise can save a LOT of time. Time is money, here, and irrespective of rates, you want this work done right.

I've seen R-70 go for as low as $250, and as high as $450 in the last year, so if you're determined to go in this direction, shop carefully.

And off topic posts are strongly discouraged, too. The
FAQ obviously does a wonderful job of discouraging
that.

Is the goal to remove the political/religious discussion
or to make sure that the appropriate topic is discussed
in the right forum?? If it's the former, an RFD to make
r.r.s a moderated group would be the way to go. We
discussed this ad nauseum in 2000, so it wouldn't surprise
me in the least that it's being discussed again. The
solution then was to have several people create Yahoo
groups, and a lot of people who had good knowledge
to share but tired of the religious flame wars simply
migrated off r.r.s and to the Yahoo groups.

If the desire is to make sure the appropriate topic
(in this case satellite radio) gets discussed in the
right location (alt.radio.satellite), then a modification
of the Charter and FAQ is more appropriate.

> Every usenet group is supposed to have an FAQ. I quoted from the
one

>
> If you have issues, I suggest you take them up with this guy:
>
> http://www.brandi.org/logs/

Of course, the FAQ is a living document, and can be amended
as needed. When the FAQ was last modified in 1995, satellite
radio in it's current form did not exist. Nor internet radio.
Websites like rffun (Universal's), eham and others did not exist
in their present form, and all that disseminated knowledge
is not reflected in the FAQ. It would save a lot of time and
energy repeating commonly known things if the FAQ were
simply updated.

Cellular phones would qualify under the rec.radio.shortwave
FAQ, but you never see them spoken about here. Same with
satellite television or regular television. CB or scanners you'll
see once in a blue moon, but they qualify also. As written,
the FAQ is so broad that anything you can monitor using
a radio is on topic. Probably even using a radio telescope
for monitoring would be on topic too, but how often does
that show up on the menu??

The one big item not mentioned in the FAQ is "what is
a radio?" Everyone knew what that meant back then in
1995, but it's not so cut-and-dried now, given that the
traditional AM and FM modes of communication now
also have satellite digital decoders to share space with as well.

I think it's time that the charter and FAQ were updated to
reflect the changes of the past 10 years, and whether or not
certain topics should be covered by r.r.s.

In the future it would be very helpful for those of us who cannot read
your mind if you quote the source when you copy rarely read things like
the FAQ's. I doubt that Brandi.org will be able to control the way you
post so contacting him would be fruitless.

I've never used an IC-R71A, but I have used an R70
in the past. It's a nice radio that's a step up from
the portables (the 2010 being the exception), but
it's rather idiocyncratic in some ways. Tuning
using the knob used to drive me nuts after a while
because you'd be constantly switching between
step size. Dual VFO's helped a bit, but after having
had a keypad to move around or an old style band
switch and dial on a tube radio, it's a bit harder to
get used to.

That said, the performance was rather nice. Not
as good as a tabletop of today, mind you, but it
probably fits in line with the Kenwood R-2000
and the Yaesu FRG-7700 and FRG-8800. Audio
wasn't the greatest, but it wasn't bad either.

The main drawback of ebay is that you don't get a chance
to actually listen to the radio, like at a hamfest. If you
find one at a hamfest, make sure you bring along a
piece of wire and an extension cord so that you can
try out the radio before you buy.

And so what. Both the firebombing and the nuclear explosions were
designed to get the Japanese to stop fighting a losing battle. One
that would have cost our side and theirs huge numbers of killed had a
land invasion taken place.

> You haven't heard of the bombing of Koln and Dresden.

I like to think of them as partial payback for London and numerous
concentration camps.

>
> For that matter, you haven't heard of the Rape of Nanking, Serbia,

The author of that piece sees the world in colored and white terms:
The white oppressors against the colored (usually black) oppressed.
I'm gonna guess he is also a proponent of slavery reparations for those
with some link to the formerly oppressed from those with some link to
the former oppressors.

>
The FAQ is a response to commonly asked questions. There is no
requirement for a newsgroup to have one, and there isn't anything
official about it. Someone gets tired of the repetitive questions,
and puts them together with answers. Either it stays, or someone
comes up with a better one.

More important is the charter and even the discussion leading up
to the creation of the newsgroup.

I went and dug up some of that back on Apr 24 2003 in a thread titled
"Recreation Radio Shortwave: Mission Statement - Charter" with links
to early newsgroup articles.

Sadly, the new google interface means that the links to those
old articles don't work. You can still retrieve the links by
clicking the "view original post" link, but then one has to cut
and paste them in. I can't be bothered doing all that again.

But from when I did do that earlier checking, it's clear that this
newsgroup is about more than shortwave. It's about receiving so
it includes long wave and AM broadcast band and FM broadcast band.
I can't quote at the moment, but my interpertation is that it was
meant to be about DX'ing, ie not talking about the local top forty
FM station, but room enough for discussing hearing that Mississippi
station for a few minutes in the summer when you are a long way away.

Again my interpretation based on that earlier reading is that it
wasn't mean for political discussion.

I should also point out that it wasn't intended to be another newsgroup
for amateur radio. There is a whole hierarchy for that,
rec.radio.amateur.* Obviously there are times when amateur radio can
come up here, like someone wanting to tune the ham bands and isn't sure
where they are. But it's not intended things that only pertain to
being licensed, and it sure isn't meant to be a spillover from

rec.radio.amateur.misc or rec.radio.amateur.policy and some fools seem to think.

Fascinating. How did we get lasers, fiber optics and integrated
circuits out of a crashed spy balloon?

I agree that we don't want to begin an endless discussion about whether rec.radio.shortwave should be moderated. We just shouldn't go there.

Updating the charter and FAQ seems like a promising direction, though. Let's go for it.

It is quite possible to acknowledge there is a force, which promotes
intelligent organization inherent in the universe, without having to
''believe'' that things are run by a judgemental bearded freak, and
that only by adhering to a book full of arbitrary rules can one get
in-tune with the river.

Yes, and that was before the current interest in
satellite radio or internet radio was in place.

Clarification is need now on those two items.

> Again my interpretation based on that earlier reading is that it
> wasn't mean for political discussion.

Nope. That's why the more explicit newsgroups for
political discussion were created in the first place.
Of course, being usenet, off topic stuff abounds.

Correct. IIRC, the amateur groups predate the shortwave
one by a bit.

What you suggest is justice is actually lynching. It would be interesting
to actually have such a trial BEFORE the execution. Such a trial would
provide a forum where the accused could raise all of the issues, including
the lawfulness of the war.

I was vacationing in Cuba in February and got to tour RHC courtesy of Arnie Coro. At one point, he asked how reception was for the various RR and RHC frequencies and I mentioned that Radio Rebelde came in quite strong on 5025 kHz and he mentioned that some transmitter/antenna improvements had been made.

I guess we're kinda on the same page jd. I think the answer lies beyond the known universe as well. Hey I was reading in Pop Sci. or Omni? that it's becoming commonly accepted by quantum physicist and other scientist studying theoretical phisics that the existence of up to eleven different dimensions may exist. Look up Superstring theory and M string. Can you beleive that in some other dimention Rickets "may" actually may have a brain?

A couple of my sayings:

A million years from now they'll refer to this period as the Magical Stupid Age :)

I don't believe in Heaven but I would like to qualify for it in the event I'm wrong. :)

Now believe me when I tell you that my song is really true

I want everyone to listen and believe

Its about some little people from a long time ago

And all the things the neighbors didnt know early in the morning daddy
dinky went to work

Selling lamps & chairs to san berdino squares

And I still remember mama with her apron & her pad

Feeding all the boys at eds cafe!

Whizzing & pasting & pooting through the day

(ronnie helping kenny helping burn his poots away!)

And all the while on a shelf in the shed:

Kennys little creatures on display!

Ronnie saves his numies on a window in his room

(a marvel to be seen: dysentery green)

While kenny & his buddies had a game out in the back:

Lets make the water turn black

We see them after school in a world of their own

(to some it might seem creepy what they do...)

The neighbors on the right sat & watched them every night

(I bet youd do the same if they was you)

Whizzing & pasting & pooting through the day

(ronnie helping kenny helping burn his poots away!)

And all the while on a shelf in the shed:

Kennys little creatures on display!

Ronnies in the army now & kennys taking pills

Oh! how they yearn to see a bomber burn!

Color flashing, thunder crashing, dynamite machine!

(wait till the fire turns green...

Wait till the fire turns green)

Wait till the fire turns green

E-voting machines rejected
State says Diebold failures in massive mock election could translate to problems at polls
By Ian Hoffman, STAFF WRITER

After possibly the most extensive testing ever on a voting system, California has rejected Diebold's flagship electronic voting machine because of printer jams and screen freezes, sending local elections officials scrambling for other means of voting.
"There was a failure rate of about 10 percent, and that's not good enough for the voters of California and not good enough for me," Secretary of State Bruce McPherson said.

If the machines had been used in an election, the result could have been frustration for poll workers and long lines for thousands of voters, elections officials and voter advocates said Thursday.

"We certainly can't take any kind of risk like that with this kind of device on California voters," McPherson said.

Rejection of the TSx by California, the nation's largest voting-system market, could influence local elections officials from Utah, Mississippi and Ohio, home of Diebold corporate headquarters, where dozens of counties are poised to purchase the latest Diebold touch screens.State elections officials in Ohio say they still have confidence in the machines.

But McPherson's decision did send California counties from San Diego to Alameda to Humboldt hunting for potential alternatives to their plans to use the TSx.

By January 2006, every polling place nationwide must offer at least one handicapped-accessible voting machine ï¿½ touch screens are one example ï¿½ and all California touch screens must offer a countable paper record so voters and election officials can verify the accuracy of electronic votes. So far, no voting system has been state approved that meets both requirements.

"This is a muddle because there is no certified system right now," said Elaine Ginnold, acting registrar of voters in Alameda County. "We have to look at all of the nonoptions."

McPherson denied approval of the TSx after a series of failed tests, culminating in a massive, mock election conducted on 96 of the machines in a San Joaquin County warehouse. San Joaquin is one of three California counties that purchased a total of 13,000 TSx machines in 2003 for more than $40 million and have paid to warehouse

them ever since.

For eight hours July 20, four dozen local elections officials and contractors stood at tables and tapped votes into the machines to replicate a California primary, one of the most complex elections in the nation. State officials watched as paper jams cropped up 10 times, and several machines froze up, requiring a full reboot for voting to continue.

Diebold Election Systems Inc. plans to fix the problems and reapply for California's approval within 30 days, company spokesman David Bear said.

"They had 10,000 ballots and 10 paper jams. Obviously that needs to be looked at and addressed, and it will be," he said. "But it needs to be put into perspective."

Elections officials and voting activists said they
had never heard of more extensive testing for a single voting system, outside of an actual election. Kim Alexander, president of the Davis-based California Voter Foundation, said McPherson deserves credit for ordering rigorous testing.
"It's the first ever conducted in the state and, to my knowledge, in the country that simulated a real-world experience with these machines in a voting booth," she said.

Ordinarily, states and the National Association of State Elections Directors approve voting systems after labs hired by the manufacturers perform tests on a handful of machines. The Diebold TSx managed to get through those tests ï¿½ twice. But none of the testing standards addresses printers on electronic voting machines, even though more than 20 states either require a so-called paper trail or are debating such a requirement.

For years, voters have reported frozen screens and other glitches in the polling place.

"It's always been the voters' word against election officials' and the vendors'," Alexander said. "Now we have real proof right before the eyes of state elections officials."

Reliable voting equipment has been a problem before for Diebold in California. In the weeks before the March 2004 presidential primary, the firm rushed a new device called a voter-card encoder through assembly, testing and temporary state approval. Hundreds of the devices broke down on election day. Without the devices, thousands of voters in two of California's largest counties, San Diego and Alameda, could not vote on Diebold's touch screens. Lines developed, and hundreds walked away without voting.

California withdrew approval for some Diebold voting systems, and company stock sagged. Elections experts said McPherson's decision probably saved the company from a repeat.

"Diebold for some is sort of teetering on the public-relations edge, and so something like this, with 10 percent of the voters potentially affected, that would be a pretty big PR issue for Diebold," said Sean Greene, research director for Electionline.org, a nonpartisan voting-reform clearinghouse.

In the Bay Area, Alameda and San Joaquin counties had planned to use all TSx machines in the 2006 elections, and Marin County planned to put at least one machine in each of its polling places.

The death penalty is a possible sentence for Treason. Only a leftist commie sympathizer would refer to it as a lynching - LOL.

The only issue would be her "Aid and Comfort to the enemy" and would have nothing to do about the issues of the war itself.
It doesn't matter what her political views are or if the war was justified. She committed Treason and at the very least put American soldiers in danger - period. Spy's have been executed during peacetime. She committed Treason during wartime.
Have you no sense?

A book was written about Hanoi Jane by two lawyers and is noted in this thread. I suggest you put down the Leftist propaganda newspaper and read a real book once in a while.

Lynching, so far as I am aware, refers to hanging of a person without
benefit of a trial. The definition could have changed.. YMMV.

However, the killing of any person without benefit of a trial is murder,
irregardless of the crime of which they are accused.

The Blacks would get angry again?

oh..as a side note..pay no heed to the Ace. He's our local 'deficient in the qualities that make us human' representative. He's been like that since the horse kicked him in the side of the head during a visit to farm outside of Dayton, Ohio back in 1983. You will notice his repetitive use of the same three word as 'insults'. It's funny.

Is it possible the dead man was running towards the uniformed policeman in order to get help against his pursuers? Would the police even tell us if this were the case?

Funny coincidence department. I've always been under the same impression, but I've been studying up on the subject recently and have learned that it means (and always has) execution without the benefit of due process, usually by a mob. (I'm not sure where the exact line between straight out, plain old murder and a lynching murder is.) It's just that hanging was the usual method in the U.S. and so we make the connection between the two.

> However, the killing of any person without benefit of a trial is murder,
> irregardless of the crime of which they are accused.

Irregardless isn't a word, either. ;)

From Merriam Webster online:

One entry found for irregardless.

Main Entry: irregardless
Pronunciation: "ir-i-'grd-l&s
Function: adverb
Etymology: probably blend of irrespective and regardless
nonstandard : REGARDLESS
usage Irregardless originated in dialectal American speech in the early 20th century. Its fairly widespread use in speech called it to the attention of usage commentators as early as 1927. The most frequently repeated remark about it is that "there is no such word." There is such a word, however. It is still used primarily in speech, although it can be found from time to time in edited prose. Its reputation has not risen over the years, and it is still a long way from general acceptance. Use regardless instead.

All you guys have to do, over there in the USA, is make your vehicles more fuel-efficient. Then you don't have to rely on middle-eastern dictatorships/colonies to supply the oil. Over here in Scotland, it's not perfect by a long way, but at least we have cars which do decent miles-per-gallon (40+). A necessity, with gasoline over $5/gallon.

regards,

Ian, Clydebank, Scotland.

Honus should have said that it's not an ENGLISH word. Borderline American maybe,
but not English.

==========
ir·re·gard·less (ĭr'ĭ-gärd'lĭs) pronunciation
adv. Nonstandard.

Regardless.

[Probably blend of IRRESPECTIVE and REGARDLESS.]

USAGE NOTE Irregardless is a word that many mistakenly believe to be correct usage in formal style, when in fact it is used chiefly in nonstandard speech or casual writing. Coined in the United States in the early 20th century, it has met with a blizzard of condemnation for being an improper yoking of irrespective and regardless and for the logical absurdity of combining the negative ir– prefix and –less suffix in a single term. Although one might reasonably argue that it is no different from words with redundant affixes like debone and unravel, it has been considered a blunder for decades and will probably continue to be so.

You should consider the history of the "French resistance" during
WW2 and think, perhaps, that maybe French people are not so much
cowards, after all. No nation is perfect (take the USA for example),
but you are being unkind.

Don't get me wrong. The French appear somewhat arrogant and
self-righteous to me. Demanding special treatment in Europe etc.
Hardly qualifies as cowardice, though. Then, there is the recent
hardline approach to Muslim fudamentalists; far stricter than any
policy of the UK government. They have balls somewhere.

That is the most disgusting thing I've ever heard. Who are these perverts and
why do they want to ruin civilization? Is there no way to stop the 'spread'?

John Smith wrote:
> David:
>
> You have two choices, either a creator made us, or we came from a mud puddle. There are problems with both of these:

Why only two choices? Most real-world problems have more than two choices. Shouldn't ever stop thinking at two. This is a thinking disorder that most of humanity has had, to stop with dualism when there are almost always more options.

Maybe a Creator made us from a mud puddle from evolution (just to offer a third alternative), or maybe a Creator made evolution (the laws of the universe and conditions necessary for life itself) and sat back and watched the rules He/She/It/They put into place create us while sipping a nice cianti. :)

>
> 1) If we are the product of a creator, we would be expecting angles.

If we are the product of a Creator, then we may or may not be provided with proof. That would depend a lot on what the Creator wanted us to know, how much evidence we've observed, and how smart we are. :)

The scientific method, while not the only possible way to discover truth, is stunningly successful at self-correcting its own errors and approaching truth. The proof it, it works. No amount of philosophy or prayer or faith will get you to the moon and back or compute a trillion floating point math operations per second. Science does. It works, and finds its own mistakes over time.

Every scientific-method claim must, *by definition*, be DISPROVABLE by experiment. If you can formulate a hypothesis and an experiment and the hypothesis makes a wrong prediction, you can toss it out. If it withstands a lot of attacks of this sort, it gradually goes from a hypothesis to a theory. (A theory is basically established fact until something upsets it. In scientific terms, something doesn't get to be called a "theory" until it is very comprehensively in accordance with observed facts.)

The relevance here is, you cannot possibly prove or disprove the existance of angels in a hard-science way. Unless you can give me a reason to believe that angels necessarily prove the existence of God or the lack of angels prove the non-existance of God, or for that matter proving that angels exist, is all completely outside the realm of science.

That said, evolution is the only (and nearly universally-accepted) explanation for life on earth, which is backed by many different independent observations from different fields of science. Not just archeology, but geology, astronomy, cosmology, chemistry, nuclear science, even radio (cosmic background radiation). They all point to a universe about 11 +/- 0.2 billion years old which had to be uninhabitable for an awfully long time after the initial moment of creation. Not 7 days. And species clearly sprang into being at many different times throughout geologic history, not all at once over 7 days.

Does this disprove the existence of God? Not at all. It does disprove creationist arguments, comprehensively. If life was created by intention, it was done gradually over millions of our years. Angels or no. :)

>
> 2) If we are the product of a mud puddle, we are waiting for an alien. As obviously, there are millions, perhaps billions of planets out there with mud puddles on them, and some were probably able to crawl out of those mud puddles before we got our start here.

The Hitchhiker's Guide to the Galaxy has the perfect counter-argument to this.

The Universe:
Area - Infinite
Infinite : Bigger than the biggest thing ever and then some. Much bigger than that in fact, really amazingly immense, a totally stunning size, real "wow, that's big," time. Infinity is just so big that by comparison, bigness itself looks really titchy. Gigantic multiplied by staggeringly huge is the sort of concept we're trying to get across here.

Add to that, the Universe is staggeringly old.

Even if the Universe is teeming with life (and I believe it is for several reasons), the chances that the nearest life is close enough to detect us, let alone visit us, is probably miniscule. See also: Drake equation.

I tend to believe there is intention of sorts behind the Universe. But I'm not going to be stupid and deny what's been proven, which is life has been on this Earth for eons and many species alive today weren't alive until comparatively recently.

It's clear the fault isn't with God, but with our tiny-minded ways of conceiving of God. Dogma is the enemy of truth.

The odd satellite radio postings to this group are relatively infrequent compared to the endless idiotic political ranting. Indeed, with satellite radio, there is some degree of topic overlap in that a number of the major international broadcasters can be heard on satellite radio. I myself would not come to rec.radio.shortwave to start a thread on a satellite radio related topic, but if someone else does, I have no reason to get irritated over it. If someone is interested in the given topic, then let 'em respond to it. If not, delete, ignore, and get on with your life. We have to wade through a lot of rubbish on this group as it is with the "Nuclear Nightmare" and "Bring 'Em On" nonsense. And as such threads as these demonstrate, there's a big appetite for off topic trash in this group. Let's face it, amending some charter or any other such measures is an utter waste of time. The fact of the matter is that periodic satellite radio related postings would continue to emerge, as would the deluge of other off-topic postings. The instigators would continue to instigate; the ranting types would continue to rant. It's what they enjoy doing: whether it's in giving their stern disapproval to satellite radio or in displaying their mindless political views. Enjoy the banter, folks. This is usenet.

That's a new one on me.

Most people, when they don't have a reply, or can't give a reply, tend
to just keep quiet. But not you. This "I generally don't give detailed
replies to 'tards" response is a first for me.

But that's OK, as I doubt you have anything new, or "detiled" to tell
me. In fact, I KNOW you don't.

Not a VN vet, are you? (Can you handle a reply to that one?)

hi, all

i'm an owner of Sangean ATS 505 shortwave radio, since it features SSB
listening, i would like to know if there's a SSB station broadcasting
in my area that i could listen to

any advice or suggestions?

thanks

From first impressions only, I like it a lot.

SHOCKER. It's assembled in India NOT China.

The build quality is actually superb for a rig classified as a portable. The sync detector work very well IMO but remember I've only used one night, a couple hours now. It also has double sideband like the HF-150. The PBT on a portable is really a nice touch. The thing that amazed me was how well it's implemented. They really took their time to do this one right. I think it will be a big seller for them even at 5 bills. Prices will probably drop $75 by the holidays. This is also because of the build quality. This doesn't stink from a cheap China clone factory product. Once people realize it's a very respectabl built rig, they'll buy it.

The sound quality is very good and clean.
A real pleasure for BCB so far. Being able to knock between 7khz and 4 is nice and comes in handy.

The bass and treble controls work very well especially with the bandwidth choices of 7/4/2.3. I can't comment on the sensitivity yet cause I don't have a PAL connector for the external antenna. Don't know why they chose such a adaption. I have my main antenna hooked up to the whip for tonight. There is choice of "DX" which acts as active antenna to boost signals.

You can chose from internal antenna {whip} to ext ant. with side switches. One for FM and one for HF. The case seems to be made of some type of hard, but rubbery feeling material. I think it could handle a moderate drop. The eronomics are good on the very front though the buttons seem a tad on the tiny side. But, I found that the knobs like the volume and PBT, bass and treble to not be as recessed as much as I'd like. Turning the knobs sides is very easy but if the radios back stand is pulled out and it's rested tilted up, you feel there is not enough debt to them. You do get used to it pretty quickly but it irritated me somewhat.

The whip can be rotated at a 90 degree angle so the it can point straight up when resting on it's back. What I didn't like was the whip wouldn't stay on it's side or at a 45 degree angle. When I let go of it it fell all the way to one side. Perhaps it can be tightened a little to keep in exact position.

Now I didn't go thru the whole manual yet, but in ECSS the frequency seemed to be off like 7kHz.. It didn't zero beat on certain known local stations here in Florida. I don't have that with my other rigs. Looking thru the menus I can't find a offset for it. Only an offset for the time and clocks. I have to look into this more.

The AGC has a slow/fast and Auto mode which keep the AGC in fast mode between tuning so you don't miss weak signals. Too bad you can't turn it

off.

That's about for now. I need to spend more time with it and read the complete manual twice before I can really give more observations. The only thing that really bothered me was the ergonomics. They should have made sure there was a 360 degree recess all around any knobs.
It's not like it's a tiny portable with little real estate to work with.

If this was priced at $300, it would fly off the shelves. But, I think since it's considered a "sat radio", people have to pay for added XM components that they don't need. Like I said before, I believe XMSR helped Eton out to some degree with the quality of this radio.

I'll tell you one thing this makes one hell of a portable if you got the energy to power it. They say many of the fuctions drain battery life more then the others so.
It's a pretty big portable. It's man's tote!

Lucky

Hi,
I lie NE of you about 50 mile in Maryland. SSB stations are either
Amatuer radio stations orutility stations.
With the exception of the Armed Forces Network bobe
broadcast prograns.
Do a Google search for tility frequencies and you will
find all the above.

Most transmit in USB except amatuers which use LSB under 7 mhz and USB
above

2 government stations you should pick up easily are
8992 and 11176 USB

Also try 5696 khz for the us coast guard near the Chesapeake. Remenber
you have to park it on a frequency and wait till they transmit

Most of it would be taxes or fees. The world price of crude is pretty much just that, the world price of crude. The UK is paying pretty much the same price for crude as we are.

I tend to fall into the category that subscribes to this latter point of
view, but even that requires faith, as does most anything in life.

As for the fossil record, there may not be sufficient "transitional forms"
to prove one way or the other. Since evolution is a process of mutation,
it's likely that only successful mutations survived long enough to leave a
sufficient record. Other mutations may not have been viable and therefore
left no record. This argument leans toward the egg side of the chicken/egg
argument because whence the chicken came may not have been a chicken in this
case.

But I ramble. Nice to see an intelligent argument for a change.

Sorry, but that's not the way it works, nor is it the way it worked in
this instance.

Let me be specific.

The actual medal/ribbon didn't have a "V".

The actual citation does not have a "V".

The ONLY thing that has a "V" on it is his DD-214.

He was put in for the award by Admiral Zumwalt.

There's no question that the incident, as Kerry described in the
after-action report, happened. It is the same as those who were there
that day described.

It was NOT an awards clerk, but a clerk who types/processes DD-214s.

6698. Lowe SRX 30

Newsgroup: rec.radio.shortwave
Date: 2005-07-30 12:15:01 UTC
From: Mike Lee <swift240@yahoo.co.uk>
Message-ID: <9bKGe.40169$dN6.39769@fe1.news.blueyonder.co.uk>
Source record: 30237

Hi all, has any one got info on the "Lowe SRX 30" I have done a search
on Google but no real results.
How good is it? How bad is it and in what areas?

At present I am using a Realistic DX200 and a DX394.
I just need to know if the Lowe SRX 30 will be any better.

TIA,

Mike.

> some or all of his applications for medals.

Of course it doesn't. I was just trying to get you to reply to
something.

Since you're a person who has paid such close attention to Kerry's
medals, and how they were faked, I was hoping to hear your detailed
analysis/explanation about them.

Instead, when asked to do do, you come up with this "'tard boy" thing,
which has even less to do with all this than you being a VN vet.

> Nice try, 'tard boy... but you just flunked out.

Not me. You're the one running. I'm right here, waiting for you.
Waiting to hear your expert analysis - - - After which I will reply.

You're the one who made the claim. I just asked you to back it up.

Any on the outside chance anyone is watching/reading, they can decide
if I fit your description . . . or if you're just projecting.

Keep calling me names if you'd like. I'll be here waiting for an
intelligent reply.

Report in the paper yesterday the police somewhere in the US fired 120 shots at an unarmed driver trying to get away.

See: http://kerry-04.org/war/citations.php

Lot's of questions... who put in the paperwork for the original award, was it Kerry as he did with his bogus Purple Heart awards? And why the revisions? Hmmmmmmm...

6706. Determining If A Rec'd Station Is From A Relay: How ?

Newsgroup: rec.radio.shortwave
Date: 2005-07-30 12:54:13 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <TKOdnfNdTdwM5HbfRVn-sQ@comcast.com>
Source record: 30245

Hi,

For a beginner like me, was pretty thrilled thinking I picked up China Radio International direct.

But as replies to my post of last evening mentioned, it appears that all I received was a relay from Sackvill, New Brunswick.

So I guess this brings up the question:

Is there any way for a Newbie like me to (easily) determine if what I am picking up
is direct, or a relay from somewhere else ?

Thanks,
Bob

I have been waiting for this to come up. The Police are damned if they
shoot and damned if they dont shoot. Some one from some where will
moan, winge, wine and complain all about the Police and the way they acted.
Well LISTEN..... As far as I am concerned they done the right
thing, ok, its very very sad that an Inocent person got killed
BUT.....If they didnt shoot and he WAS a bomber and it blew up and
killed a load of people then people would have good cause to winge,
wine, moan and complain.
At times the Police just cant win, because every one else would have
done it better.

So letts all tell the Police NOT to shoot and to take a chance and see
if he will blow up or not, just in case he is Inocent. FUCK THAT.... I
dont think so.
So next time then, if the Police DONT shoot and one goes off and if one
of the people who get killed are a son or daughter or other loved one,
then just say to your self ohhhhh thats just fine officer its better not
to shoot in case he was Inoccent. It realy dont matter about the people
who just got blown to pieces does it.

This is REALITY like it or not. We all have to live with it.
The Police are not perfect and will never be so, and if it comes to that neither are any of us. So for those who will moan, wine, winge and complain, THINK about it, would you rather take a chance or not? Knowing full well that chance may be your last on Earth. Ohhh I had better not shoot him just in case he isnt one.......just to please all those out there who know better than every oner else on earth.

I'm sure you're a very nice person. I do not get your ''joke''at all.

Why is pointing out bad potato salad relevant to diabetes?

For English language broadcasts go to http://www.primetimeshortwave.com and
get the ascii "sorted by time" schedule". Relay codes are listed and appear in the
schedule beside a frequency that is a relay. Target areas for broadcasts appear in
"notes".

For all broadcasts get bc-a05.txt at http://www.eibi.de.vu
Transmitter sites appear near the end of the text and are a bit harder to figure out
since they are listed by each country's abbreviation.

Example:

0100 0157 CHN China Radio Int. E WNA 9790/CAN ENA 9580/CUB

Country China, Station China Radio International broadcasting in English to Western North
America on
9790 out of Canada and Eastern North America on 9580 from Cuba

Using a database, such as ILG will help. It will tell you such things
as where the signal is from, who the intended target is, and what the
power is.
(and yes, the first time I "caught" CRI, I was disappointed when I
found out it was from Sackville)

I think it's just that an uninvited guest constantly pointing out that
this or that may be spoiled is a good definition of a real nusiance.

Diabetes, if a person has it, is a good example of a real nusiance, too.

Tony

There is a guy that has been on the list from time to time that everyone gets mad at because of a little antenna that he makes. He make a very nice yo-yo antenna and a double Yo-Yo that work very well, I have used it all over the world.

Maybe someone can add his name and email address. I think he made the Tini Tina.

I seem to recall reading about an antenna made up of a coax cable
shorted to itself at one end, and only the center feed going into the
radio at the other.
The interesting thing about this antenna is, it is placed on the
ground.

I've got a book around here someplace in which the author suggests
using a chalk line (unused) loaded with wire.
It seems one could get quite a bit wire on one of those things.

YUP, I'm a diabetic also and I have learned that if it taste good I can't
have it.
But I'm doing 5.6 last checkup.

That was slightly over a month ago, the city was Compton located in
Los Angeles County, California. The agency was Los Angeles Sheriff
Department. The initial response to this by the Sheriff Department
was that the deputies failed to coordinate their response with each
other, failed to follow training/accepted practices for such a
situation and in general blew it.

FWIW, several Southern California law enforcement agencies are
struggling with how to respond to threats from suspects in vehicles;
1) it is difficult at best to determine if they are armed and 2) the
vehicle itself constitutes a weapon. So, somebody who is driving a
3000# 'weapon' and also has a firearm and is in a 'mighty pissed off'
state of mind does become a real threat to public safety. Sometimes
law enforcement does truly blow it, try to remember that for every
largely publicized error there are hundreds of traffic stops, warrants
served and arrests made that happen without incident.

Business doesn't care about human rights, morality or politics unless it pads their bottom line.
It is up to YOU to make your voice heard in Washington, Ottawa, Berlin, etc..
Otherwise, business will crush you.

READ! Then write your Congressman, Senators and Members of Parliament!!!

North Korea's Nukes: Will the Free World Ever Learn?
Communists cannot be trusted

By D.J. McGuire
China e-Lobby http://www.geocities.com/china_e_lobby/
Jul 29, 2005

Another round of talks on Stalinist North Korea's nuclear weapons began July 26 in Beijing, and unlike the previous three rounds, they opened with soft words, an open-ended timetable, and an outward determination on the part of all involved—the United States, the Stalinists, Communist China, Japan, Russia, and South Korea, to reach an agreement that will lead to complete denuclearization of the Korean Peninsula.
In other words, we're in big trouble.

Lest anyone forget, these talks are the fourth attempt to get the Stalinist regime to agree to stop breaking the promise it made in 1994 under the Agreed Framework, which itself included a promise to stop breaking a promise it made in 1985 to never develop nuclear weapons. Each time, the Stalinists were offered concessions in exchange for their supposed willingness to return to the status quo ante. Each time, the United States and her allies—Japan and South Korea—brought themselves back to the table to repair what the Stalinists themselves ruptured. This time, however, the situation is different: the Chinese Communist Party is in the game, keeping a close eye over the actions of its allies.

In other words, we're in really big trouble.

These talks are based on one flaw—a flaw large enough to make the entire episode, including the agreement it spawns a dangerous mistake. That flaw is the assumption that Communists can be trusted.

One would have hoped Stalinist-in-chief Kim Jong-il would have already proven that with his broken nuclear promises and his downright heartless dishonesty on the issue of Japanese abductions. To this day, Kim has insisted that eight of the thirteen Japanese abducted by his regime have died, without a shred of evidence to back it up (the regime insisted the bodies were swept away by a flood). Naturally, Japan, who has been a member of the six-party talks since they started, has insisted this issue be resolved. However, it appears the old arms control shibboleth—any agreement by definition is a good agreement—is holding sway again. The dovish government of South Korea is telling Japan to, in effect, put a sock in it, while the U.S. appears to be ignoring the abduction issue entirely.

Meanwhile, the Stalinists are already building on significant concessions they won before this round of talks even began. In October 2002, when the Stalinists boasted of their uranium-weaponization program, a bold-faced violation of the 1994 agreement, the U.S. insisted the entire program be eliminated before even discussions of aid to the regime would begin. Last year, in the third round of the talks, the U.S. had offered to let the aid spigot be turned on before one single nuclear weapon was destroyed. This time, the Stalinists also want the U.S. to stop sending nuclear submarines anywhere near Korea, and is calling for a full-fledged peace treaty (their previous demand was a non-aggression pact)�plus, of course, an immediate resumption of aid. The dovish South has already offered to plug the Stalinist regime into its electricity grid if it merely agrees to disarm�a move Secretary of State Condoleezza Rice has already endorsed.

Why are so many democratic officials telegraphing their intentions to simply take Kim Jong-il at his word? We are told this agreement will be different because the Stalinist North would have to break its word to five other parties, not just one. Specifically cited is the Stalinists' oldest ally the Chinese Communist regime. This is where things really go off-track. How can anyone take the Chinese Communist Party at its word on the actions of its ally? This is the same regime that insisted Saddam Hussein was not a threat to the free world as it was selling him missile parts and helping him to integrate his air defense network. This is the regime that merrily repeats Khomeinist Iran's assertion that its nuclear development is "peaceful" as it helps the mullahs develop nuclear weapons.

This is also the regime that piously told the world it wanted a "nuclear-free peninsula" in Korea while selling Kim Jong-il tributyl phosphate, a chemical essential for weaponizing uranium and developing plutonium.

The only possible reason the Chinese Communist Party and its Stalinist ally would be truthful in this agreement is the fact that so much aid is on the line—Communists tend to be more honest with each other when it comes to stealing other people's money. Unfortunately, that honesty never includes the victims themselves—in this case, the U.S., South Korea, and Japan.

Besides, what consequences will the Stalinists and Communists suffer if the deal is broken? All Kim Jong-il has seen since he broke the 1994 deal is more concessions at the bargaining table. Some will argue that he also lost a continuing supply of fuel oil. However, South Korea just made up for that with its electricity offer. Does anyone really expect Roh Moo-hyun to shut off the power once the Stalinists are caught cheating again? He has already made a slew of bilateral side deals with the regime, and his Uri Party has an enormous stake in his "sunshine" policy. Odds are, he'll find some reason to keep the power on, and Kim, his Stalinist minions, and his Communist Chinese allies know it.

So what we can expect is either a badly overhyped deal with phantom promises by the Stalinists in exchange for real concessions from the U.S. et al, or a promise for more talks in this new "conciliatory" atmosphere, giving Kim Jong-il more time to hide the nuclear weapons he has, win more side-deals

from the South, and play ?bad cop? to the Chinese Communist Party?s ?good cop.? Either way, the Chinese Communist Party will reap immense geopolitical capital ? as the midwife of a deal, or the beleaguered host trying to bring the U.S. and Stalinist North Korea to an agreement. The recent heartburn in Washington over Unocal, the Communist military, and Taiwan will be washed away with good feeling or sympathy regarding these talks.

In other words, be afraid, be very afraid.

Brit practice is to follow until something happens. A helicopter is
useful. If the driver is known to be armed then an ARV (Armed Response
Vehicle) is called in. The occupants have to get permission from a
senior officer to open the locked box and carry the firearms.

(and the Leftists are Silent)

Mendacity in Beijing
By Lt. Col. Gordon Cucullu

In a Freedom House sponsored conference in Washington, DC two weeks ago, Rabbi Abraham Cooper, Deputy Director of the Simon Wiesenthal Center in Los Angeles, strode to the podium carrying an empty chair. He placed the chair down firmly and declared that it was the symbolic seat for the "seventh participant at the Six Party talks, the voiceless people of North Korea." At the first formal meeting of the Six Party talks in more than a year, held on July 26 in Beijing, the participants not only ignored the chair, they tipped it over. In a display of cynical cruelty both American and South Korea diplomats - who supposedly have the moral foundation and fortitude needed to stand up for the downtrodden - not only disregarded the wellbeing of the starving, imprisoned people of North Korea but had the audacity to behave as if the meeting was a huge success.

Stunningly, any reference to human rights was intentionally kept off the agenda, but even worse, the South Korean representative, Deputy Foreign Minister Song Min Soon, had the gall to lay down the law to Japan. The Japanese people have been especially upset about North Korean admissions that its agents have kidnapped scores - perhaps hundreds - of innocent civilians from Japan over the past few decades. Many of the abductees are women and children who are used to train North Korean agents. These agents are either dispatched to conduct espionage within Japan or are used in active terrorist operations and fall back on a Japanese "cover" if apprehended. This issue has raised such a firestorm within Japan that Prime Minister Junichiro Koizumi refused to eat with Kim Jong Il at their last meeting, and instead brought his own food as a protest against the intransigence of the North Korean regime.

So for a South Korean foreign ministry official to warn Japan that "it would definitely not be desirable to take up issues that would disintegrate the focus of the talks," was an arrogant statement that reaffirmed what analysts suspected all along: that strategic weapons issues and economics would once again overrule human rights in the mendacious atmosphere of the Six Party talks. Naturally the US representative, Assistant Secretary of State Christopher Hill, went along with the flow. All of his comments dealt with delusional "progress." Tellingly, Hill abjectly conceded the initiative to the North when he said "we do not have the option of walking away from this problem [of North Korean nuclear disarmament]."

Not that America has ever had the initiative in these talks. For years Kim Jong Il has been yanking the US chain harder than a model in a Bow Flex commercial. US representatives to the Six Party talks make public

pronouncements as if they are in control. But whenever Kim Jong Il is pressured and needs to delay, he feigns a fit of pique and boycotts the talks. If his hollow economy squeezes too hard and he needs some material support he grandiosely announces he will attend "in return for security concessions by the imperialists." US officials waffle like a sine wave in reaction to Kim's calculated mood swings. They cling to the delusion that while Kim turns the crank on the organ, and they beg pennies with a cup, that somehow the monkey is in control of the operation. What is extraordinarily reprehensible is the State Department's inability to do what it is supposed to do best: control diplomatic negotiations.

Meanwhile, the bureaucracy disregards explicit policy guidance. Late last year both houses of Congress unanimously passed the North Korean Human Rights Act. It was immediately signed into law by President Bush. The law demands that in all dealings with the North Koreans that human rights for the long-suffering people of North Korea be placed on the table for discussion along with any other issues, nuclear, chemical, or missile. This is not mere policy or guidance - either of which would demand obedience from a loyal staff - but is the law of the land, duly filed and recorded.

The flagrant, offhanded disregard for this law is stunning but not unusual. Readers know that I am consistently critical of the State Department (closely followed by the CIA and FBI) as being the most dysfunctional of all Executive Branch agencies. Officer selection is anachronistic, training is incestuous, arrogance is consummate, and the union flies top cover for all FSOs deflecting criticism and threats of dismissal. Nevertheless, a great deal of responsibility for the behavior of the middle managers lies with a leadership failure at the top, at the levels appointed by the President. This includes, to my acute disappointment, Secretary Rice and her appointed staff. To be fair it is terribly difficult to be a cabinet secretary and conduct a top-to-bottom house cleaning of such a key department. Nevertheless, someone must eventually say that enough is enough and take on the challenge for reform.

Meanwhile, those of us who read reports that North Korean people have had their meager government food ration cut to 200 g daily (520 g is the world standard for survival), while well-fed diplomats preen around conference tables and pose for grip-and-grin photo ops, grind our teeth in frustration. As long as the Six Party talks continue on a flawed policy of separation of strategic arms discussion from human rights issues - which are catastrophic in North Korea - then the outcome of the talks is predestined to failure. Such luminaries as Natan Sharansky, who has through his own experience seen what happens in such a case, call for a gathering of nations to produce a policy similar to the Helsinki Accords that linked human rights to strategic issues and in so doing finally brought about freedom for Eastern Europe and the collapse of the Soviet Union. Such an accord would be incredibly more productive that the current failed Six Party talks and would recognize our moral responsibility to free the people of North Korea.

Lt. Col. Gordon Cucullu has been an Army Green Beret lieutenant colonel, as well as a writer, popular speaker, business executive and farmer. His most

recent book is Separated at Birth, about North and South Korea.

Unless you were there, in the planning rooms for the invasion, with the appropriate clearances, I doubt you knew that. Then again, I doubt you knew how to read, so you might have made a fine message boy.

Unlike you, I have actually studied the planned invasion campaign. It would indeed have saved lives, but not because Rush told you to believe that.

For those who really think the surrender (which were more a, let's go back to status quo ante) overtures to the soviets were genuine, or even possibly going to be honored, perhaps you should study up on what happened the night the emperor recorded his "surrender." I quote that because he never said that; rather he said that we would have to "endure the uneendurable" and that "the war effort has turned distinctly to our disadvantage."

Anyway, the head of NEC, a couple more execs and techs came over to record two master discs. The military wasn't ready for that, and they had planned on assassinating everyone around the emperor and holding him captive, along with destroying those discs. The discs were hidden in two different places, and several people protected the knowledge of where they were with their lives, ranging from personal servants, to NEC people.

The military guys tore the emperor's palace apart looking for the discs and didn't find them.

The disks were recorded late at night, by dawn, the coup leaders realised their efforts were hopeless. The leader committed suicide. Fittingly, his hara-kiri didn't kill him immediately, he lived for several hours, undiscovered, impaled on his sword in a chair.

Now, had the invasion happened... well, first off, no fighting soldier taking place in the first week was expected to survive. None. 100% casualties. However, the allies expected to eventually push inland. The goal was to take half of a single Home Island, protect that part, literally -- not figuratively -- pave it over to make it one huge airbase, and then continue on from there.

If you think the bombs, or the firebombings which were worse, were
bloodbaths, you hadn't seen anything.

The point, which you seem to have missed, too, is that just because it used a fission reaction doesn't make it the ultimate evil. Tokyo, Dresden, Koln were all far more destructive. I'm not talking about motives here, so spare me. The POINT is, the nukes were destructive as in what a single bomb could do, but they sure as hell weren't when compared mission-for-mission.

I would have far rather been 5 miles away from Hiroshima than 5 miles away from Dresden. I suspect even at that distance I could have been sucked in by the firestorm.

That is what our law enforcement agencies do also, wherever possible.
Often, the suspect will stop and force a confrontation in a highly
populated area which leaves the officers little choice in their
response. The case cited above is NOT typical of law enforcement
response where the goal is apprehension of the suspect with minimal
risk to the general public. FWIW, I am familiar with Compton and can

offer that if patrolled by the Brits they would NOT keep their firearms in a lock-box.

Yup, called the "snake antenna" and many claim excellent results
with it (I've never tried it). I don't know what the optimum length (if
one) is suposed to be.

Tony

Will it pick up that radio station in Monticello,Mississippi in the daytime from over here on the West side of Jackson,Mississippi where I live.If not,I am not interested in that radio.Look in a Rand McNally road atlatlas,Monticello isn't far from Jackson.Build a AM radio for about $300.00 that will pick up Monticello from where I live without an external antenna and I will gladly buy that radio.

Are you implying that the proceeds from this radio will still serve the CCP unless the Taiwan manufacturer is under it's own control? This time they have to pay rent and normal overhead like everyone else.

It's only assembled in India but of course the components must still be Chinese. This is only my impression, but I think the workers in India crank out a better product if only because they don't live under communism and WANT to do their personal best. Their personal moral and attitude has to be more cheerful, positive and geared towards producing a better product then a forced slave, low paying laborer and it shows.

It's a solid radio and you can appreciate it's quality in comparison to other Chinese
made radios.

I never had a Sat 800 or even listened to one, but from the couple people who do own both say the E1 sounds much better then the 800 and they like it much better.

My few beefs are NO carrying handle. What were they thinking? If it's a portable, how are you supposed to carry it around comfortably? Also, I would have liked to see an adjustable stand on back of the radio for different angles of viewing. You see the display can be adjusted for contrast, but you lose readability from certain angles.

This means you must manintain a certain line of sight setup so you can read it properly all the time especially the smaller print labels near the very bottom of the display. Or, you can just keep the radio in an upright postition eliminating this slight oversight.

Now, there are only 2 little rubber feet towards the back of the radio to keep it from slipping. Why they didn't put rubber on all 4 feet doesn't make sense. The cost must be under 1 cent when bought in bulk.

I need to run over to Rat Shack to pick up the Pal adapter so I can check on the sensitivity of the rig. ECSS is fine except for the 5 to 7khz offset for the stations I listened to. The double sync sideband works very well. It's comparable to the Lowe 150s implentation of it but I would say the Lowe does a better job of it.

Aagin, I have only spent one night with it and didn't read the manual completely yet. I was out all day on friday and was kind of tired when it came to reading and comprehension of the info. I will read it all today and tomorrow. The manual also comes on a CD. Oh, they give you pre printed return lables if you want to return the radio for almost any reason.

Here are your choices:

1] Defective
2] Unwanted gift
3] Quality
4] Changed Mind
5] Damaged
6] Wrong size
7] Wrong Color
8] Arrived too late {much too late :)
9] Not Item Ordered
10] Other reason and you explain why

So as you can see they give you 60 days and don't care why you don't want or like it. I'm very, very pleased with that. But, I looks like this is the Sharper Image's policy only.

Ok guys, off I go soon to pick up the Pal adapter. Everyone have a safe and happy day.

Lucky

Just to be contrary I'll predict that the purchase of IBM's PC division will
lead to increased capitalistic tendencies in the Chinese and dilute the ranks
of the brainwashed masses who wish us ill.

I am not knocking Taiwan,but Sangean radios are made in Taiwan (do y'all hear me? Art Bell and George Noory and Bob Crane,y'all bunch of chicken feathers!,Idiots!,Morons!,Freaks,Queers!,Suckers!) and Sangean radios are wayyyy over priced cheap a.. crap! I know,I once bought two of them and I sent that wayyyyy over priced cheap a.. plastic crap! radios back to Bob Doofus Crane in Fortuna,California.Bob Crane and Art Bell and George Noory,Shove them Sangean's UP y'alls a...s Sideways,y'all pedlars of wayyyyyy over priced cheap JUNK! Hey Art Bell,where are you,old boy girl Minnie Pearl.(do tune in) NOT!

Thanks Lucky for the observations. I am surprised that it ended up being produced in India. I wonder what company is doing the assembly?

I'll probably end up getting one someday, but I still plan on waiting for a few more productions runs (and perhaps a revision) before I get one.

> much better.

I don't find this hard to believe. The 800's sound is good, but some of
its predecessors certainly had better sound.

>
> My few beefs are NO carrying handle. What were they thinking? If it's a
> portable, how are you supposed to carry it around comfortably?

I think the trend is to classify receivers as 'portable' or 'tabletop'
based on their performance rather than their size. This is a misleading
use of the term 'portable', but it explains why a behemoth like the
S800 is called a 'portable' while a sleek little racehorse like the
HF-150 is usually termed a 'tabletop'.

Also, I would
> have liked to see an adjustable stand on back of the radio for different

Hmmm. These do sound like slightly annoying shortcomings, but you can
probably find ways to compensate for them.

>

I would be more concerned about this. I'd find out what this is about
before your 60 day trial period is up.

The double sync sideband works very well. It's
> comparable to the Lowe 150s implentation of it but I would say the Lowe does
> a better job of it.

This doesn't surprise me, but the comparison is probably unfair to the
E1. Despite its hefty pricetag and its many features, I don't think it
was intended to rival receivers like the HF-150.

It's hard to argue with this return policy. If you decide not to keep
it, you should have no problems.

Over here in Jackson,Mississippi,they have cracked down on tinted windows in vehicles and I say that is good.There is a noise ordance too,such as those loud A.. boom boxes/radios in vehicles but they don't enforce that law very much.It is suppose to be if that racket can be heard about 200 feet away,the cops can issue them a..holes a ticket.But every once in a while,them yeyhoos come down my street with that loud raket rattling my windows.If it was up to me,they would all be castrated and never allowed to ever drive again.

China White used to refer to a pure form of heroin. Fentanyl is a synthetic drug developed as a substitute for morphine. Did a quick Google search and see that somehow over time they are taken as 'the same' http://www.adhl.org/chinawht.html Darn how things have changed from the 60's 70's! Though I think if you are referring to the China White that came into America during and shortly after the Viet Nam war it was heroin and not fentanyl - no direct experience though.

China White is also the name of a tasty looking after dinner drink http://cocktails.about.com/od/poussecafs/r/chinawhite.htm

You are confusing issues here. In the firebombing of tokyo, london,
dresden or koln there were numerous devices used which resulted in
numerous highly destuctive fires. In the two separate nuclear bomb
attacks on japan one device was used in each attack with extreme
destruction the result.

You said ''someone'' set up the dominos. I interpret that as you supporting the theory that there was a ''creator'' and that said ''creator'' had hands.

I say ''smarts'' is bigger than any being and a value inherent in the universe. There is an original DNA molecule who likes to travel.

Peacek.

Oil Companies Discover 'Sustainability'

By Charles I. Burch, Prairie Writers Circle. Posted July 30, 2005.

The companies have yet to admit that no scheme for providing sustainable energy can rely on petroleum.

Sustainability is big in corporate America today. The word, that is. Once an arcane term used chiefly by foresters and agricultural researchers, "sustainable" has become the label of choice that executives use to describe their businesses.

Perhaps the most laughable of the newly "sustainable" corporations are the oil companies. Pumping a finite resource like oil out of the ground must be one of the least sustainable endeavors on the planet. But this doesn't bother the oil industry, which knows a powerful public relations word when it sees one.

The most recent ConocoPhillips annual report has a section titled "Technology Achieving Long-term Sustainability," and the CEO writes of the company's "sustainable growth plan." Annual reports from ChevronTexaco and ExxonMobil speak of "sustainable development." And BP and Shell issue reports on the sustainability of their operations. There are even auditors willing, for a fee, to vouch for the statements in these "sustainability" reports.

All this when Arthur R. Green, lecturer for the American Association of Petroleum Geologists and former chief geoscientist of ExxonMobil, says world oil production is nearing its peak.

The history of U.S. oil production is instructive.

Domestic oil output steadily rose until it peaked in 1970. Since then production has declined despite the technological know-how of domestic oil companies and the considerable incentive of high prices. Domestic oil production in 2003 was less than 60 percent of its 1970 level.

To meet our demand we import foreign oil. More than 56 percent of what we used in 2003 came from other countries, and the proportion increases every year.

Increase, taper off, then decrease -- world oil production will follow the same pattern. Some experts think world output is very near its peak already, while others say the peak will arrive sometime between now and 2050.

Five complications make this grim picture even bleaker.

First, the world's largest oil reserves tend to be in countries with unstable governments. Unrest can disrupt supply.

Second, insiders have been suspicious for some time about oil reserve figures claimed by certain Middle Eastern countries. In 1987 the United Arab Emirates claimed reserves of 33 billion barrels; in 1988 they claimed 98 billion barrels, according to the U.S. Department of Energy. Iraq and some other Middle Eastern countries also reported similarly implausible sudden increases. These figures probably owe more to politics than sound science.

Third, China, until 1993 a net oil exporter, now imports more than 40 percent of its oil and is the world's third largest importer, after the United States and Japan. With 1.3 billion people, one-fifth of the world's population, and an economy that has quadrupled since 1978, China is developing a world-class thirst for oil. China and the rest of Asia now consume about as much oil as the United States.

Fourth, as demand climbs past supply, already high oil prices will rise even higher. The "energy crisis" of the 1970s showed how sensitive overall inflation, interest rates and the stock market are to increased oil prices. The oil squeeze will not just raise the cost of energy. It will affect the entire economy.

Fifth, even as oil becomes more scarce, development of replacement fuels remains on the back burner. Do not expect the oil companies to do more than token research on other fuels. True, they do have experience taking on large projects and have sophisticated ways of analyzing risk. But their investment and expertise are in petroleum.

If an oil company makes a genuine sustainability breakthrough -- figuring out, for example, how to make hydrogen efficiently with solar power -- you can be sure the company will publicize this rather than promote the pleasant fiction that its current operations are sustainable. The reality is that no scheme for providing energy sustainably can rely on petroleum.

But do not expect to hear that from oil executives.

Charles Burch was a senior staff scientist at Conoco before retiring in 2002. He wrote this essay for the Land Institute's Prairie Writers Circle, Salina, Kan.

David:

Mostly true. However, there are no "hydrogen wells" or "hydrogen mines", most all supplies of hydrogen come from oil (hydrocarbon-petroleum.) It is possible to separate hydrogen from sea water with electricity or supertemperatures, however, this requires an energy source to do so.

Hydrogen fuels, at least at this point, are a fairy tale to appease the masses...

Cold fusion is still a possible resource, however, if it is developed to its full extent, any one with a glass of water can probably develop a "super weapon", I think they will drag their feet for a long time because of that...

No there not fairy tale. The technology exists. It's just that we're so
locked into fossil fuels that nobody wants to make the investment.

There are some interesting chemistries coming on line that may
actually be able to produce hydrogen from biomass that have a
favorable input/output result.

http://www.nature.com/nature/links/020829/020829-4.html

Hydrogen is attractive because it could allow us Americans to keep
driving ourselves around in our little cars.

Brian:

How so, where is this "hydrogen" going to come from, for free?

I have never seen pools of the stuff lying about. In college labs I have extracted it from sea water, strange, it takes about as much energy to recover it from sea water as you get back when you burn (use) the hydrogen....

What am I missing?

Yea I've never seen pools of gas laying around either. It cost $s to turn oil into gas, right? Yes it cost money using electricity to do the work of extracting hydrogen, but there are other ways too that can work like titanium dioxide & solar energy to offset the cost of more expensive ways etc.. My point is if there was enough human energy and $s thrown at the project, we would have it licked and the world would be a cleaner better place. There are many scientist that claim they can do it with the right resources and I believe them and as long as the big oil CO's are still selling oil it's going to be hard stopping they're lobbyist.

Brian:

Ways do exist of getting "virtually free energy."

Huge sheets of reflecting aluminum foil unfolded in space, to catch the sun rays and focus them on a HUGE laser rod/tube, beaming the laser beam to a steam-electric generator on the face of the earth.

Schemes also exist which would use microwaves in place of the laser beam... THESE ARE DOABLE NOW, at this very moment!

I am not really a "nay sayer."

Our Culture IS Multicultural.

Our Australian soldiers in Iraq, have a military role to play, and that

is to protect other Coalition Forces, Iraqi Public Assets, and the
lives of Iraqi civilians.

The Muslim Community in Australia has been very well treated, and
strongly supported by the Australian people.eg. 500,000 people turned
out to protest against a War in Iraq, before that war broke out. The
activism of individual Australians at their own expense to get a better

deal for asylum seekers has been an awesome expression of our aussie
ideal of 'a fair go for all'. This last can't have gone unnoticed by
our nearest Muslim country, Indonesia.

We have many faults in our national character, however, being perpetual

bastards to the powerless isn't one of them.

Tall Poppies could do with a steel vase though..

What's wrong with that? Being thieves, they couldn't have asked for better
treatment. Hell they didn't even see it coming. You cant get more humane
than that. :)

Its not just Community Radio... Im sure

Keith

Community Radio Payola

Community radio station 3PBS FM may be in breach of
broadcasting laws by apparently selling airtime to
bands and performers.

Community radio station 3PBS FM may be in breach of
broadcasting laws by apparently selling airtime to
bands and performers.

An expose on Triple J this week found the station was
offering bands in Melbourne sponsorship deals which
included a two hour live set on air.

The Broadcasting Services Act allows a maximum of 5
minutes per hour for sponsorships.

The act also insists that all sponsorships are clearly
identified on air, which did not happen on PBS.

The sectors peak body the Community Broadcasting
Association of Australia (CBAA) says the law is clear when it comes to
sponsorship.

General Manager Barry Melville told Triple J, stations
must ensure that "sponsorship will not be a factor in
determining access to broadcasting time".

Triple J says it obtained a letter from PBS to artists
offering to make a bands CD "album of the week" for a
fee.

PBS Music Manger Sarah De Borre admitted this was in
the letter, but said the policy no longer exists.

The PBS website says the station has been treated
unfairly by Triple.

What dxAce says is right about the basic cost of producing gasoline in the UK. It's just that the tax is around 80% of the pump price, making it possibly the most expensive in the world.

As for loss of fuel tax revenue; money saved by those using fuel-efficient vehicles will be spent in other ways, presumably increasing revenue elsewhere, such as with sales tax etc. The problem will be how to overcome any shortfall when this happens. Higher taxation is not often a vote winner. :-)

Here in the USA it seems as though some are looking at a tax per mile driven rather than the at the pump tax. This will overcome the loss in revenue for the higher MPG vehicles.

If I recall, California was looking at such a scheme.

5.6?? What number is that? I try in vain to keep my blood glucose below 120 (except, of course, right after meals). Sometimes, if I actually starve myself, and eat nothing for most of a day, I can get it down to around 85 (low end first thing in the morning is SUPPOSED to be around 60, I've yet to have it below 116)..

very likely the A1C number Brenda anything before 6 is acceptable

My Old man hovers about 6.5 dispite about everything we do, we are
declaring a wary victory

Myself discovered the onset of my own with nice 14.2 highest the doc
could recall seeing (and I was feeling really REALLY BAD) shoved it
down to 5.9 other a few months

The A1C measures something that relates to a kind of average Glucose
level

spoken as Diabetic and the son and Grandson of one

5.6 undoubtedly refers to his HA1c number, which is a measure of ones blood glucose levels for the three months prior to the test.

Say Harvey,
He was asking about the Yo-Yo antenna. I have one and it works great.

Have you ever tested the marvelous Tiny-Tenna?

Burr

Dude, you need to do IRC chat!
Mirc is a windows program which allows you to IRC chat, how you can do it on webtv is beyond me. I looked at webtv when they were giving all the hype on it, I thought, "Why?" and went back to my computer!

Anyway, you can chat with women worldwide (guys too) and there is the capability to directly send each other files (read pictures here), some of the women wear thongs, or less.

Trust me, better than ham radio! Check it out...

He's tried the hairless breeds, but they escape his grasp too easily..no doubt causing a condition of canis interruptus.

OK then. Are you saying Kerry typed up his own DD-214? I don't believe
you are.

People wanted to see Kerry's records. He posted many of them, including
his DD-214. It had an error -- the "V" -- so what? Mine has the wrong
birthdate. So what?

This was so blatantly off-base as far as the Swift Boat Veterans for
"truth" were concerned, that they didn't bother to comment when this
hit the "news".

> > He was put in for the award by Admiral Zumwalt.

> have formally signed it and sent it up the chain, but the question remains,
> who prepared that particular OPNAV 1650/3? Apparently, only John F. Kerry
> knows for sure.

Ahh, here's where we may have a problem/misunderstanding. It was NOT
sent up the chain. It was issued by Zumwalt's office. And this is
apparently the reason for it being too long, and containing somewhat
less flowery language than most such citations. An assumption on my
part -- The person who prepared the citation usually didn't do that
sort of thing.

Up until just before that incident, a SS had to be approved by the
SECNAV. That rule was changed, allowing people like Zumwalt to quickly
issue these "impact awards".

As I think you know, the incident happened Feb 28, 1969. The medal was awarded something like March 6.

> Then there are three citations, all made at demonstrably different times
> and by different parties, for the award.

I know. And each of these two subsequent citations are shorter and contain less detail than the original. They also contain language which is not true. This language is found nowhere else -- not in the after-action reports, nor is it something that anyone present has claimed. ("intense automatic weapons fire", and "numerically superior enemy force")

> "...Although Citation 2 also is undated, we can still ascertain when it was
> issued. Kerry's first citation was for action on February 28, 1969, so

> tenure as a United States Senator..."

What little I know about this is that sometime back in the mid-80's, Kerry requested a copy of his citation.

> Then we have SECNAV Lehman saying this about where Kerry's SS Citation came
> from: "It is a total mystery to me. I never saw it. I never signed it. I
> never approved it. And the additional language it contains was not written
> by me."

Of course he didn't write it. Why would he? Don't they have clerks for that sort of thing? (Serious question, as you seem to know more about the process than I).

> Oh my word! In addition to the obvious questions raised by the snips above,
> there are plenty of other questions that are begged.

I'm not quite sure what you mean. I'm saying that for the SS incident,
the after-action report, the original citation, and what those of us
there that day have said happened . . . pretty much match.

No, I don't know. Perhaps I never knew. Why would I know, or for that
matter, care?

I am simply saying that the person who typed uphis DD-214 made a
mistake.

6897. Recommendation for Airband Scanner

Newsgroup: rec.radio.shortwave
Date: 2005-07-31 11:09:38 UTC
From: Pred02 <gbozovic@bu.edu>
Message-ID: <1122808178.573065.225250@g43g2000cwa.googlegroups.com>
Source record: 30386
Cross-posted to: simflight.vatsim,rec.radio.shortwave,uk.rec.aviation

Hi,
I am interested in purchasing a portable and inexpenisve Airband scanner/reciever so I can listen to the airwave frequency around airports and big cities. I would like the scanner to be compatbile in the US and Europe (if frequencies are different).

Any suggestions are appreciated.

Kind regards,
George B.

Yo Yo antenna looks OK.. Random Wire.. in Fancy Packaging.

Heard many many things about Tiny Tenna..

Upshot is if yuo got $20 burning a hole in your pocket..
Why not go through the process of getting one..

Won't make you
Won't Break you..
& it's a genuine peice of Electronic Memorabelia..
Priceless on Ebay in years to come..

Try a secondhand (U)BC120XLT or (U)BC220XLT.

No, I'm not. You are, or you are being deliberatly obtuse.

The point is, the firebombings KILLED MORE PEOPLE.

They were more DESTRUCTIVE.

End of story.

So, which was "more evil?" (which is a bullshit construct, but lets
leave that alone for now...)

Killing 75,000 people with a nuke?

Killing 300,000 people with incindiaries?

Killing 300,000 people with incindiaries, timing the individual waves
to catch fire and rescue people in the open and unprotected? (read up
on Dresden.)

6906. USA Government Has Officially Collapsed

Newsgroup: rec.radio.shortwave
Date: 2005-07-31 14:40:22 UTC
From: David <rickets@knac.com>
Message-ID: <2jope1hl3sk6gh2q7odqn72clb4phial65@4ax.com>
Source record: 30393

Congress sheds oversight obligations. News Media vanishes.

''Given what we've seen of late, you might assume I'm making this up, but this news report is real.

Democrats and their allies are demanding that Sen. Pat Roberts hold hearings on presidential advisor Karl Rove's role in the unfolding Valerie Plame scandal.

But Roberts, who chairs the Select Senate Committee on Intelligence, isn't budging, saying that Rove's role in the revealing of CIA agent Plame's identity is already under investigation and that his critics are playing politics.

"The sharks are in the water," he said. "Senate Intelligence has to be nonpartisan."

That's right, Pat Roberts is accusing us of playing politics, and pretending to care about non-partisanship on his committee. That would be the same Roberts whoï¿½

* prevented his Senate Select Committee on Intelligence from making any inquiry into the origins of the Niger forgeries;

* refuses to investigate the Plame scandal, but is prepared to investigate Fitzgerald's investigation of the Plame scandal;

* believes the CIA does too much to keep their agents undercover;

* told a national television audience that Plame wasn't really a covert agent, despite all evidence to the contrary;

* dismissed the need for Plame hearings in 2003, less than five days after the White House was notified about the criminal probe, because the controversy was, as he put it, "an old story";

* defied comprehension by arguing in 2004, "If in fact [Saddam] didn't have [WMD], why on earth didn't he let the U.N. inspectors in and avoid the war?";

* and broke a promise to his colleagues (and the nation) in March 2005 by announcing that he would not allow his committee to prepare a report explaining how the Bush administration misrepresented intelligence on Iraq before the war began.

And now Roberts wants to lecture Dems about playing politics and the need for non-partisanship in the Senate Intelligence Committee. Simply breathtaking. ''

My 20 year Sony ICF-2001 recently started for it-self. In the morning it was lud playing whilst the on/off switch was down.

Later, when it happened more the sound became only al loud rushshshshshshshs. Switching the radio on and using the preset buttons or the usual blackbuttons did not gave any normal reaction.

Later also the figures on the display disaperared.

Does this mean the final recycling or can a Sony ICF-2001 used more than only 20 years ?

There is absolutely nothing wrong with dissidents in our country...I fought for your right to speak out for your views and rights...anything else would be an tolitarian in nature.

Now I am tired of all you cowards accusing the United States of all of the worlds' wrongs. I work and live, and had fought in all of these cess pools you cry afoul the USA for. Fact is the world is an evil and inhumane place. Without the USA, we'd already have WWIII. As far as the USA as being racial, pack your lazy butt up and try to come over here to the Middle East, esp. Saudia Arabia. Freedom of religion...of speech...of where you live....documents every 6 months is a minimum...it's Isalm or nothing else...an responsibility for one's own misfortune or the country's is unheard of and definitely unpracticed over here.

The professional people schooled and had lived in the USA like and understand us; but the remainder are so full of hate taught to them from cradle to grave. To keep a people in line, you must find an outside element. Western civilization is it....they do not like to work, and children and women are possessions here...foreign workers from the Third World are slaves with impossibly low wages that they can hardly return home.

Poor little Japan and bad, bad USA and her nukes. Well you liberal idiots...let me put you on those battlefields with the odds not in your favor with every new battle of ever coming home....and considering the Japanese posture on Okinawa, the BOMB saved lives on all sides. War means never having to say you are sorry.

If we had treated the Arabs as they treat others, and gave Islam the little freedom that we give their religion all over the world, IRaq and the terrrorists would be finished by now. Instead of our soldiers dying for your poor, ignorant views, why not sign up and put your life on the line for America...earn your citizenship for a change. We need the draft reistated then we'd get to see y'all in a truer light. Facing death is the ultimate test of manhood next to parenting.

You, my firned, keep being a dissenter...maybe one day your fellow citizens will get off their lazy behinds, research the clowns they put in DC, and put America and her people as number one in the congressional agendas. CEOs and the citizens lack of responsibilty are tearing Aemrica apart. Unless you like working at Buger King or MacDonald's, then be a real American and do something other than paying taxes and opening your yap about things you ever seen, or experienced first hand. And if CNN is your prime source of information on the world, see who has a large financial interest and editorial contro there...as per Jim Clancy, they read what they are told to...and an Arab financier is not about to let CNN show you anyhting but a dynamic corner of a terribly raped and frustrated culture at the hands of despots and religious quacks.

Harvery:

Is the wire strong enough where a person can hang themselves with it, in case there is a "great stockmarket crash", like happened in the 1930's?

I'd try "The National Interest" on Radio Australia. That would be
10 AM Sunday CDT on 9590, 7240 or 5995. Or 6 AM Monday CDT on 9590/9580.

On June 17, they had a great program.

An investment banker about how the oil reserve estimates are FUBAR.

And an interview with the author of "Confessions of an Economic Hitman"
about how the development banks, the US State Department and intelligence
agencies and the multinational constructions companies are playing an
version "Owing Your Soul the the Company Store" on a nation state level
by deliberatly putting third world countries in a position where they
are so tied down by their debts that they can't do anything.

If you can't figure out "why they hate us", check this out. First
you find a country that has resources or a useful geographic location.
And having a corrupt government helps. Then you come up with a
"development plan" that's total fiction. (This was the author's job
in the conspiracy, as an economist for an engineering consulting firm).
Then the third world country gets zillions in loans from the
development banks. Then the construction companies build something
that won't work or will never pay out. So now the development banks
(and the US agencies that actually call the shots) now have the poor
country by the balls.

I am not diabetic myself but do have a diabetic pet and I know that glucose and various sugars can interact with proteins in the body. A1C is glycosylated hemoglobin (i.e. hemoglobin that has a glucose now attached to it) and it gives the long-term picture of blood glucose levels as opposed to measuring glucose which can fluctuate transiently throughout the day for one reason or another (after meals, after exercise, etc.). WRT to my pet, it is fructosamine which would be measured. If A1C or fructosamine levels are low then the disease is being regulated.

Regards

John Barnard

Islamic Terrorism vs. Chinese Annihilation of the West [and the Leftists' Silence]

Lev Navrozov
Friday, July 29, 2005

The "terrorist attack" in London on July 21, as a result of which one Londoner "was hurt," held the attention of the mainstream media of all Western countries throughout that day, while on the next day the London police in their zeal shot dead an irrelevant Brazilian electrician (five bullets into the head when he had fallen and was down) because he had been running and hence was no doubt a "terrorist," for why else would he be running?

In a Russian satirical piece of the 19th century, the police chief said that his subordinates should pay special attention to "terrorists," in contrast to hate murderers in general. "But how would we know who is who?" his subordinates asked. "Easy!" explained the chief. "The terrorists wear Greek hats."

The London police have surpassed the satirized Russian police chief of the 19th century. The London police know who is who without any Greek hats, but just by the fact that one was running and would not stop when hailed by the police.

On July 20, I received the following e-mail:

Mr. Navrozov, I recently discovered your articles. ... You seem to be against the "War on Terrorism" mainly for taking our "eyes" off the real threat of China. My question is two-fold: Is Islamic terrorism a problem? If it is, how, in your opinion, should it have been dealt with post 9-11? I would be greatly interested in your response. I understand that you are probably too busy to answer me. So I just want to say that I enjoy reading your articles, for they are very thought-provoking, and at least I am not now the only person that sees China for what it is and the danger it poses to the West as we feed the dragon. Thanks, and I would greatly appreciate your response to the above question.

Sincerely,
Mike Faber

In 2001, when 2,973 persons were murdered on Sept. 11, 14,061 Americans were murdered, according to official crime statistics. The crime of Sept. 11 was a hate crime, but it is not registered in U.S. statistics as such. The number of victims of statistically registered hate crimes in 2002 was 9,222, that is, more than three times as many victims as the victims of the hate crime of Sept. 11, 2001.

The hate criminals of Sept. 11, 2001, did not kill any children individually. Now, the victims of murders statistically registered in the United States for 2002 include 185 children under 1 year old, 338 children of 1 year to 4 years old, etc.

It is often described by "experts on terrorism" that "Islamic terrorists" &#65533; no, not born-and-bred American criminals &#65533; will use "weapons of mass destruction." The "experts" forget that a born-and-bred American criminal named Al Capone ruled Chicago, while another born-and-bred American criminal named Pendergast helped Truman into the White House, which Truman never concealed; he even attended Pendergast's funeral in 1945.

Born-and-bred American criminals can procure all the weapons a "foreign Moslem" can. Besides, the weapons of 19 Moslems of Sept. 11 were American (and not Iraqi or Saudi-Arabian) airliners as well as American box cutters on sale at office supply stores.

A majority of any country consists of those who cannot understand anything beyond what they deal with in their households or in their jobs that does not require mental activity. The television for them is like picture books for children &#65533; sheer entertainment.

If a hate murderer has allegedly come from the Islamic world or at least is a local Moslem, they call his murder a "terrorist attack" and find it worth watching on television even if the victim is just one person who "was hurt."

On the other hand, if born-and-bred American criminals murdered 140,000 persons in the United States in 10 years, including 13,000 children, "the average television viewer" will not find a television program worth watching.

There is no "war on crime," for such a "war" has been waged for centuries, and the United States still ranks high on the list of international crime rates. Similarly, the only possible "war on terrorism" is the highest possible quality of crime investigation, which applies to all crimes whether or not called "terrorist acts."

The United States failed to detect the 19 criminals of Sept. 11, for the criminals proved to be smarter than the crime investigators, and this competition between criminals and investigators has been on and will be on, no matter what declarations are made and what bureaucracies are created.

As for the annihilation of the United States, or the West in general, by Chinese post-nuclear superweapons, such as molecular nanoweapons, Western mainstream television has been aloof from the subject because it has been a taboo for the Western political establishment. Too many Iraqi-oil shareholders in the U.S. political establishment have been too personally preoccupied with Iraqi oil to pay attention to dry abstractions like the development of post-nuclear superweapons in China since 1986 in seven fields.

The "war on terrorism"? Not crime such as murder (or rape), but "terrorism"! But how do the 19 criminals of Sept. 11 differ from born-and-bred American criminals? Surely some WASPs hate the United States as much as do "foreign

Moslems." I have met such WASPs. In the early 1970s, they were the rule rather than the exception among intellectuals.

Those members of the U.S. political establishment who use the phrase "war on terrorism" merely show thereby that they do not know the ABCs of the Islamic suicidal hate crimes against the United States or the West in general. The word "suicidal" needs an explanation first and foremost. Not so long ago, suicide was regarded in the West as an escape for a psychiatrically normal person from an unbearable and otherwise inescapable misery. Today it has been proved that suicide is genetic.

Between 1960 and 2002, 12 suicides a year occurred in the United States for each 100,000 persons. Among white males, the rate went from 22.3 in 1950 to 19.1 in 2000 (per 100,000 persons); among black males, from 7.5 to 10.0; among white females, from 6.0 to 4.3; and among black females, it was 1.8 in both 1950 and 2000. It is impossible to suppose, for example, that black females lived in 1950 and 2000 equally well and far better than did black males, white females, and white males! Obviously, suicide is genetic, not environmental.

Similarly, a certain number of suicides have occurred and will occur per 100,000 inhabitants of the Islamic countries, even if the relevant statistics do not exist or are not reliable.

What happens to someone genetically inclined to suicide? The sublimation of the suicide. In the West of the past two centuries, it has been assumed that the beautiful cause of suicide is unrequited love (see Goethe's "Verter" and listen to the opera of the same name). In the Islamic world, where a man can have up to four wives if he has the money to keep them, this kind of lyrical sentimentality is absurd, so the beautiful cause of suicide becomes heroic death while murdering infidels.

Since a genetically suicidal person seeks death anyway, he prefers to die beautifully. Those 19 suicidal Moslems died beautifully (as many Moslems saw it) on Sept. 11, 2001. When will new Moslems genetically inclined to suicide smash the White House to smithereens, as the 19 Moslems of Sept. 11 intended to? This is a matter of suicide statistics and of the sublimation of suicidal death wishes unless the suicidal murderers are detected by investigators before their crime, not after.

Chatterboxes of the Western political establishment chatter about governments behind Islamic suicidal hate murderers, their training, their financing, their "links" and whatnot. Suicidal hate murders raged in Russia, and Dostoyevsky said that a suicidally inclined person is the freest individual on earth. He craves no wealth and fears no legal retribution, for he has sentenced himself to death.

It is assumed by chatterboxes chattering about the "war on terrorism" that it is easier to apprehend the suicidal hate criminals than the other murderers. Also nonsense! Before their crimes, suicidal hate criminals can hide as skillfully as can any other criminals. After their crimes, ordinary murderers live on and can be apprehended. On the other hand, the 19 suicidal

hate murderers of Sept. 11 killed and burned themselves.

The occurrence of Islamic suicidal hate murders is erratic. The next set of murders comparable in scale to Sept. 11 or surpassing it, may occur in the United States tomorrow or in five years or never, depending on the suicidal curve and the sublimation of suicides into hatred for the United States. This sublimation has grown enormously due to the U.S.-led Iraqi war for oil, and hence a grimmer version of the Sept. 11 murders is more probable than it would have been without that war for oil.

On the other hand, the development of post-nuclear superweapons in China, such as molecular nanoweapons, is steady, relentless and growing in scale in accordance with the dictators' will and money. It is anything but suicidal. On the contrary, it is to safeguard, via world domination, the dictators' absolute power, along with their wealth and longevity.

It is the behavior of the Western political establishment instead that is functionally suicidal for the West. But this will be a quiet, harmless suicide. As the Chinese military authors of "Unrestricted Warfare" (Qiao Liang and Wang Xiangsui) conjectured, the United States will perish "not with a rumble, but a snicker."

This is not featured by the mainstream media. There is nothing photogenic for television in the annihilation of the West. First, the TV screen is to show the West and then the lights are to go out. What is it? Nothing. Annihilation. Who is going to watch it? What for? To ruin the mood for the rest of the day or the night?

How far more interesting it is to watch a "terrorist attack"! It is almost a thriller, with the Western police so supervigilant and superskillful that the hate murderers in London managed on July 21 to hurt only one person! Next time the "terrorists" will manage just to break a little glass. The "war on terrorism" is being won gloriously!

As for the statistics of hate murders, forget it! These are NOT "terrorists," but hate murderers!

All that the "war on terrorism" demonstrates is that the mental level of the Western political establishment, including the mainstream media, is so low that the West as it is today is not fit to survive the annihilation by post-nuclear superweapons being developed in China since 1986 in seven fields.

http://www.newsmax.com/archives/articles/2005/7/28/235620.shtml

---

Moving beyond sub-micron integrated circuits, the Chinese defense industrial complex is placing more emphasis on microelectromechanical system (MEMS) technology. MEMS is vital for miniaturizing components to reduce weight and volume of military systems, to include satellites, robotic reconnaissance systems, and nano-technological weapon systems. MEMS applications also include miniature inertial measurement units for brilliant munitions;

merging information processing with sensors; and for miniature, low cost deformable mirrors to compensate for atmospheric distortions when using high-powered lasers. There is a movement, driven in part by COSTIND, to form a MEMS state-leading group which will focus fiscal and manpower resources to achieve technical breakthroughs.

Nanotechnology Weapons

An article by Major General Sun Bailin of the Academy of Military Science is particularly important because it illustrates how asymmetric attacks on U.S. military forces could be carried out with extremely advanced technology. General Sun points out that U.S. dependence on "information superhighways" will make it vulnerable to attack by microscale robot "electrical incapacitation systems." (635)

The targets would be American electrical power systems, civilian aviation systems, transportation networks, seaports and shipping, highways, television broadcast stations, telecommunications systems, computer centers, factories and enterprises, and so forth. Sun also suggests that U.S. military equipment will also be vulnerable to asymmetrical attack by "ant robots." According to General Sun, these are a type of microscale electromechanical system that can be controlled with sound. The energy source of ant robots is a microscale microphone that can transform sound into energy. People can use them to creep into the enemy's vital equipment and lurk there for as long as several decades. In peacetime, they do not cause any problem. In the event of relations between two countries deteriorating, to the point that they develop into warfare, remote control equipment can be used to activate the hidden ant robots, so that they can destroy or "devour" the enemy's equipment.

"Magic Weapons"

In "Military Conflicts in the New Era," Major General Zheng Qinsheng points out that the well-known scientist Qian Xuesen "laid bare the essence of the military revolution" to be information technology. (636) Zheng, like Chang Mengxiong, advocates new measures of effectiveness.

In a rare remark that apparently criticizes Local War theorists, Zheng asks, "Where shall we place the nucleus of high-tech development? Where shall we put the main emphasis of local high-tech wars?" Zheng reveals that "a consensus on these issues has yet to be reached throughout the army. People still tend to place greater emphasis on hardware instead of software, and on the present instead of the future. Such a transitional 'optical parallax' is hindering us from gaining a correct grasp of major contradictions." Zheng concludes by recommending a conscientious study of the RMA, new ideas on military development, and "magic weapons" that can really serve our purpose.

Actually, 9 MHz. Some designs for popular tranceiver projects back
in the 50's and 60's used a 9 MHz IF, and 5.0-5.5 MHz VFO to tune both
80 and 20 meters. But that turned the tuning for 80 meters (3.5-4 MHz)
upside down.
